# Contents

## 1 Chapter 1: Getting Started

- 3 Where to Start
- 4 Parts of the Software Window
- 8 PREMIER+<sup>™</sup> 2 Modify Terms and Conventions
- 9 Touch Gestures
- 11 Hoop Selection

## 13 Chapter 2: Managing Embroideries

- 13 New
- 13 Open Embroideries
- 16 Switch Between Open Embroideries
- 17 Save Embroideries
- 18 Export
- 26 Close Embroideries

### 27 Chapter 3: Viewing Embroideries & Threads

- 27 Design Select
- 27 Overview Window
- 28 View Mode
- 29 Commands
- 29 Ghost Mode
- 29 Background Grid
- 32 Thread Colors
- 38 Color Tone
- 41 Monochrome
- 41 Control Strip
- 43 View a Range of Stitches
- 45 Stitch Player
- 45 Design Player
- 47 Life View
- 51 Zoom Commands
- 53 Design Information
- 58 Organizing Windows

## 59 Chapter 4: Select Stitches and Blocks

- 59 Select Stitches
- 61 Block Select Functions
- 61 Box Select
- 61 Color Block Select
- 62 Freehand Select
- 63 Freehand Point Select
- 63 Select All Visible
- 64 Select None
- 64 Replace Selection

- 64 Add To Selection
- 65 Remove From Selection
- 65 Move Block
- 65 Resize Block and Scale Block
- 66 Rotate Block
- 67 Modify Block
- 68 Flip or Skew Block
- 69 Center in Hoop
- 69 Reverse Order

## 71 Chapter 5: Modifying Stitches and Blocks

- 71 Modify Stitch
- 75 Edit and Add Stitches
- 76 Inserting Tie Stitches
- 77 Cut, Copy and Paste
- 78 Duplicate
- 79 Delete
- 79 Undo and Redo

## 81 Chapter 6: Borders and Appliqué

- 81 Create Borders and Appliqué Areas
- 81 Border Line
- 83 Border Shape
- 85 Border Embroidery
- 86 Border Stitch Type
- 86 Create Border
- 88 Add Appliqué
- 90 Select Fabric
- 91 Appliqué Selection
- 94 Background Picture Viewer
- 94 Background Wizard
- 101 Load Picture Wizard
- 104 Appliqué Options
- 106 View and Adjust Appliqué Pieces
- 113 Border and Appliqué Techniques

## 117 Chapter 7: Colors

- 117 Quick Color Themes
- 120 Colors Dialog Box

## 122 Chapter 8: Morphing and Cutwork

- 122 Point Morphing
- 124 Global Morphing
- 135 Add Cutwork Needle Lines
- 135 Freehand Tablet Cutwork Line
- 136 Freehand Point Cutwork Line
- 137 Cutwork Options

## 147 Chapter 9: Modifying an Embroidery

- 147 Select, Move and Merge Designs
- 149 Compensate Stitches
- 150 Break Up Stitches
- 151 Design Separator
- 154 Density Advisor
- 156 Stitch Optimizer
- 156 Trim Commands
- 156 Automatically Add Trim Commands
- 157 Remove All Trim Commands
- 157 Basting Line
- 158 Basting Line for Visible Stitches
- 159 Basting Line for All Designs
- 161 Alignment Stitches

### 164 Chapter 10: Embossing

- 164 Effect
- 164 Needle Points
- 166 Remove Needle Points In Fill
- 167 Stamps
- 172 Single Stamp
- 173 Freehand Tablet Stamp Line
- 173 Freehand Point Stamp Line
- 175 Stamp Fill

## 178 Chapter 11: Editing Objects

- 178 Select Objects
- 179 Change Object Settings
- 179 Edit Properties
- 185 Edit Lines and Areas
- 188 Nodes
- 189 MultiWave Lines
- 191 Modify Object
- 192 Display

## 193 Chapter 12: Stitch Types and Properties

- 193 Fills
- 193 Pattern Fill
- 201 Motif Fill
- 205 Crosshatch Fill
- 207 Curved Crosshatch Fill
- 212 MultiWave Fill
- 216 Echo Fill
- 218 Shape Fill
- 221 Radial Fill
- 222 Spiral Fill
- 225 QuiltStipple Fill
- 227 Contour Fill

- 229 Satin Area
- 230 Columns
- 240 Line Types
- 248 Fill and Satin Patterns

#### 252 Chapter 13: Printing

- 252 Print Page
- 256 Print

## 258 Chapter 14: Preferences

- 258 General
- 259 Optimizer
- 259 Resize

### 262 Chapter 15: Troubleshooting

- 262 Error Messages
- 267 Other Topics

## 271 Chapter 16: Quick Reference Guide

- 271 Ribbon Tabs
- 284 Toolbars
- 285 Design Panel
- 286 Control Strip
- 288 Chapter 17: Index

# **Getting Started**

djust your embroid

Welcome to PREMIER+<sup>™</sup> 2 Modify. Use PREMIER+<sup>™</sup> 2 Modify to adjust your embroideries to create new ones. Work with sections (subdesigns) of embroideries or whole embroideries, and with multipart embroideries or many embroideries at once. PREMIER+<sup>™</sup> 2 Modify contains all the editing facilities of PREMIER+<sup>™</sup> 2 Embroidery Extra, with many additional powerful features.

Edit stitches directly in 3D or 2D, as desired. Use the Stitch Player in the Control Strip to play through the currently selected embroidery subdesign as if it is stitching out, or use the Design Player D to play through all sections of an embroidery. Use Life View o to view the embroidery in real-world perspective with the desired export options.

Emboss helps you to add beautiful patterns to your embroideries. Choose from over 100 stamps, or use text or your own design, to make a single stamp, to stamp along a line or to fill a large area.

Use point morphing to magnetize, polarize, twirl or ripple stitches in small areas, or the eight global morphing effects to change the whole shape of an embroidery. With Freehand Tablet Cutwork Line *2* and Freehand Point Cutwork Line *5* you may automatically remove fabric for cutwork and reverse appliqué, or simply to cut out a shape or design.

Use Freehand Tablet Border  $\checkmark$ , Freehand Point Border  $\leq$ , Draw Border Shape  $\gtrsim$  or Border Embroidery  $\circledast$  to make a new embroidery with a satin, running, triple or motif border, optionally with appliqué stitches and fabric. Keep the section of embroidery from inside or outside the border, or simply overlay the border. As in PREMIER+<sup>™</sup> 2 Embroidery Extra, the Appliqué Piece functions Express Appliqué , Appliqué Outline on and Appliqué Hole o enable you to add appliqué fabric to an existing design with appliqué areas, and to adjust appliqué areas within a design.

Apply the Monochrome 🛃 effect to create silhouette and cameo designs from multicolored embroideries. Use the Density Advisor 📈 to see dense stitch areas and, if desired, automatically reduce the density. The Stitch Optimizer 🧄 improves the stitchout of the embroidery, both in speed and quality. Use Automatically Add Trim Commands 🕫 to trim movement stitches while stitching out, and Basting Line 💽 to secure your fabric and stabilizer before stitching. Mark any group of stitches as special Alignment 🕂 stitches, and add Tie On 🕵 or Tie Off 🎢 stitches as desired.

Add and remove Color Change 🌄, Stop 😵 and Trim 🕉 Commands. Add customized text to Stop commands to streamline the stitching process. Center Designs 🔒, Compensate Stitches 😫, Break Up 🧱 stitches to your preferred maximum length, and so much more.

Design Separator 🤌 allows you to creatively cut any embroidery into two subdesigns. (Use the PREMIER+<sup>™</sup> 2 Design Aligner 🛐 module to automatically split embroideries into multiple sections for stitching out in any hoop, or two subdesigns for multipart hoops.) 

## Finding Information

#### User's Guide and Reference Guide

The User's Guide and Reference Guide show how to start the module and provide a quick tour of the main screen. This is followed by information on key features, with short 'How-To' examples, which will help you learn how to use the module. The Reference Guide additionally contains full reference information. The Reference Guide is supplied in PDF format  $\mathcal{R}$ , ready for printing.

### Tooltips and Online Help

To learn about a function, position the arrow pointer over its icon. A tooltip with the function name and some information will appear.

The online help contains the 'How-To' examples and full reference information. Use the Help icon ?, press F1 or click the Help button. Where available, a help topic will appear that is relevant to the item where help was requested.

#### Sample Guides

The Sample Guides show examples of the Fonts, Motifs and Stitch Types that are available in the PREMIER+<sup>™</sup> 2 Embroidery System. The Sample Guides are supplied in PDF format <sup>™</sup>, ready for printing.

#### Viewing and Printing PDF Guides

To find all the Reference and Sample Guides for your PREMIER+<sup>™</sup> 2 Embroidery System software, in Windows<sup>®</sup> 10 and 8 select the Desktop tile on the start screen. Then in Windows<sup>®</sup> 10, 8 or 7, double-click the PREMIER+<sup>™</sup> 2 Embroidery System shortcut on your desktop, and double-click Reference Guides or Sample Guides. Select the desired PDF guide.

To view and print the PDF Guides, you will need a PDF reader such as Windows® Reader (included in Windows® 10 and 8) or Adobe® Reader (available from adobe.com).

#### Readme

The most up-to-date details about the PREMIER+<sup>™</sup> 2 Embroidery System are in the Readme.rtf file <sup>™</sup>. (Double-click on a Readme file to open it in WordPad or Microsoft<sup>®</sup> Word.)

#### Internet FAQs

The Internet FAQs option on the Help tab connects to a database of frequently asked questions about the PREMIER+<sup>™</sup> 2 Embroidery System. Search topics relating to the module you are using, or search all topics.

#### Tutorials

The Learning Center option on the Help tab connects to tutorials in the Internet Learning Center. The tutorials or interactive training exercises provide a 'show-me' experience that will help you learn how to use key features of the software.

## Sample Files

Samples are included that are shown in the 'How-To' examples and tutorials. The sample files will be installed to subfolders of Documents\Premier+2\Samples\Modify or the folder of your choice.

# Where to Start

## Starting PREMIER+<sup>™</sup> 2 Modify

In PREMIER+<sup>™</sup> 2 Embroidery 
, click the PREMIER+<sup>™</sup> 2 Modify icon 
 on the QuickLink toolbar at the bottom left of the screen. PREMIER+<sup>™</sup> 2 Modify will start.

#### Windows® 10; Windows® 8 Start Screen

- 1 At the bottom left of your computer screen, open the Windows® 10 or Windows® 8 Start Screen.
- 2 Type "Prem" and the Search Screen will appear.
- In Apps, click on PREMIER+<sup>™</sup> 2 Embroidery *P* to launch it.
- 4 After starting PREMIER+<sup>™</sup> 2 Embroidery, click the PREMIER+<sup>™</sup> 2 Modify icon 🔭 on the QuickLink toolbar at the bottom left of the screen. PREMIER+<sup>™</sup> 2 Modify will start.

#### Windows® 7 Start Menu

- 1 Click the Start button at the bottom left of your computer screen and the Start menu appears.
- 2 Move the arrow pointer to All Programs and another menu will appear.
- 3 Move the arrow pointer to PREMIER+<sup>™</sup> 2 Embroidery System and a menu of programs will appear.
- 4 Click on PREMIER+ $^{\text{M}}$  2 Embroidery  $\underset{\text{Pl}}{Pl}$  to launch it.
- 5 After starting PREMIER+<sup>™</sup> 2 Embroidery, click the PREMIER+<sup>™</sup> 2 Modify icon <sup>™</sup> on the QuickLink toolbar at the bottom left of the screen. PREMIER+<sup>™</sup> 2 Modify will start.

#### Shortcuts

An alternative to the Start screen/menu method described previously is to use a Shortcut to PREMIER+<sup>™</sup> 2 Embroidery. This is created automatically during the installation process.

#### Windows<sup>®</sup> 10 (Start Screen); Windows<sup>®</sup> 8

- 1 Click on the PREMIER+<sup>™</sup> 2 Embroidery 🔗 tile in the Start Screen.
- 2 After starting PREMIER+<sup>™</sup> 2 Embroidery, click on the PREMIER+<sup>™</sup> 2 Modify icon 🔭 on the QuickLink toolbar at the bottom left of the screen. PREMIER+<sup>™</sup> 2 Modify will start.

#### Windows® 10 (Desktop); Windows® 7

- 1 Close or minimize any programs you have running.
- 2 Double-click on the Shortcut to the PREMIER+<sup>™</sup> 2 Embroidery System folder. A list of the programs appears.
- 3 Double-click on PREMIER+ $^{\text{M}}$  2 Embroidery  $\underset{\ensuremath{\mathsf{P}}}{P}$  to launch it.
- 4 After starting PREMIER+<sup>™</sup> 2 Embroidery, click on the PREMIER+<sup>™</sup> 2 Modify icon 🔭 on the QuickLink toolbar at the bottom left of the screen. PREMIER+<sup>™</sup> 2 Modify will start.

## Closing PREMIER+<sup>™</sup> 2 Modify

#### Exit

Ends the PREMIER+<sup>™</sup> 2 Modify session. You can also use the Close command on the PREMIER+<sup>™</sup> 2 Modify Control menu.

#### Shortcuts

- Mouse: Click the Close icon on the title bar or double-click the Control menu box.
- Keys: Alt + F4

When you close  $PREMIER+^{m} 2$  Embroidery, all other  $PREMIER+^{m} 2$  Embroidery System modules will close automatically.

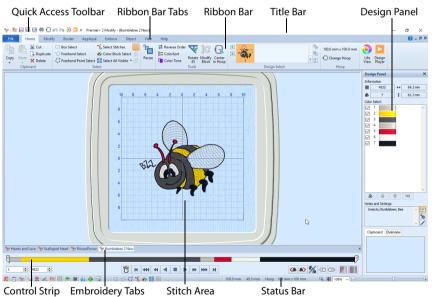

## About PREMIER+<sup>™</sup> 2 Modify

Access via the Help tab. The version number of your PREMIER+<sup>™</sup> 2 Modify module is given here. You will need this if you contact technical support at any time.

Shortcut

Keys: Alt, P, A

# Parts of the Software Window

## Title Bar

The Title Bar at the top of the window is highlighted if PREMIER+<sup>™</sup> 2 Modify is active. Each open embroidery file

) 🔁 🗄 🗟 🖶 🖶 🔿 🖉 🖘 🔁 🕫

also has its own tab showing the name of the embroidery file. The Quick Access toolbar

gives icons for the following frequently used features: Insert, Save, Save As, Export, Print, Change Hoop, Undo, Redo, Life View and Design Player.

## **Ribbon Bar**

There are nine tabs on the ribbon: File, Home, Modify, Border, Appliqué, Emboss, Object, View and Help.

An alternative way to access the ribbon options is to press the Alt key, then the highlighted letter for the tab, followed by the highlighted letters for the item, e.g. Alt, V, 3 to view a file in 3D View. Some functions are available by pressing the Ctrl key and another key at the same time. These shortcuts are shown in the tooltip for the relevant function.

Use the Home tab to select subdesigns or stitches, copy, resize, move and rotate, change threads with Color Tone, and display embroideries with Life View and Design Player.

#### **Design Select**

The Design Select area of the Home tab shows the different subdesigns or sections of a multipart design. Select the Next >> or Previous <</td>subdesigns forwards >> or backwards , or combine >> sections of a multipart embroidery.

Use the Modify tab to make changes that affect the whole embroidery, to add and edit stitch commands, and to use the morphing and cutwork features.

Use the Border tab to add a satin or stitch border to an embroidery, optionally with appliqué stitches and fabric.

Use the Appliqué tab to add appliqué fabric to an existing design with appliqué areas, and to adjust appliqué areas within a design.

Use the Emboss tab to add lines or curves of stitch points and to apply stitch points in shapes (called stamps) one at a time, in lines or as a fill pattern.

Use the Object tab to change the properties for the fill and line objects in your embroidery, or to convert these stitch types to other fill and line types.

Use the View tab to adjust the Grid, change the view mode, view Commands and stitch coordinates, change the hoop, and arrange multiple windows.

## Work Area

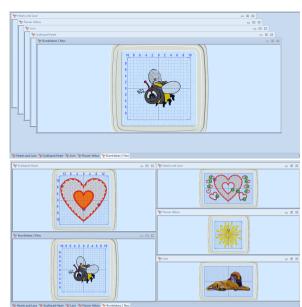

The work area is the area where embroideries are loaded. Tabs along the bottom edge will show the names of any open embroideries. Click a tab to make it the active embroidery. Press Ctrl + Tab to cycle through the windows. When the embroidery file windows are maximized then the work area is filled by the active embroidery file. If the windows are not maximized, then arrange the windows in various ways using the Cascade and Tile options on the View tab, drag the title bars to arrange them as desired, or press Ctrl + Tab to cycle through the windows.

Use Cascade to arrange multiple windows in the work area in a step-like cascade so that you can see the embroidery name on each title bar. The currently active window is placed last so that it is on top of all the other windows.

Use Tile Windows to arrange the embroidery windows in the work area. The windows are not overlapped and you can see part or all of each embroidery in each window.

## Stitch Area

This is the area on which the stitches are drawn and where you make changes to an

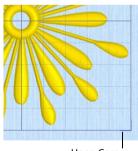

embroidery. Stitches are drawn in the appropriate colors, but most thread effects are not shown in the active subdesign. The embroideries are shown in either 3D or 2D, with or without stitch points. The background color and texture can be changed using PREMIER+<sup>™</sup> 2 Configure

Garment, quilt block or fabric backgrounds may be stored in .vp4 files. They are not shown in PREMIER+ $^{11}$  2 Modify, except for any fabric backgrounds used in appliqué. Decorations are shown, but may not be edited, except to move or delete the whole subdesign.

In 3D view 3D, the real hoop is shown, with blue corners showing the stitch area within the hoop. Movement stitches are hidden. The background texture is shown, if it is selected in PREMIER+<sup>™</sup> 2 Configure.

In 2D view  $\stackrel{20}{\longrightarrow}$  with and without stitch points, the hoop size is shown by a blue outline with bold corners. Stitches are drawn in plain colors only, and stitches using multicolor threads are drawn using only the first color in the thread definition. Movement stitches are shown as dotted lines. The background does not use texture in 2D view.

Hoop Corner

In 2D view with Stitch Points ?, black dots or small black squares show the stitch points (needle insertions) in the fabric. The display of the stitch points, whether they are dots or squares, depends on the zoom level. Showing the stitch points may be helpful for inserting new stitches or moving individual stitches. The view mode can be set separately in each embroidery.

Use Ghost Mode 🌌 to display pale 'ghost' stitches where there are hidden stitches.

Use Commands provide to show or hide the command markers for Color Change (), Stop () Appliqué (), and Trim ().

#### Background Grid

Each embroidery has a grid, which may be turned on or off or shown with numbered grid lines using the grid options **##**. Zooming in or out makes the grid squares look bigger or smaller, but the grid numbers stay the same size. The grid size can be changed from 2mm to 50mm using the View tab. The grid and numbering can be turned on and off separately in each embroidery window, but changing the grid size affects all windows.

## Control Strip

Use the Control Strip to view the colors in the selected section of the embroidery, and to select stitches by number, by color block, or with the handles on the slider bar. Stitches can be hidden for ease of editing or to protect them from being changed by other functions. Also step through the Stop commands in the embroidery.

View how the selected subdesign will be stitched out with the Stitch Player, pausing for Color ((a), Stop ((b)) and Trim ((c)) commands.

## **Design** Panel

To the right of the work area is the Design Panel. Use the Design Panel to change colors, and to adjust the Notes and Settings.

## **Design Information**

The Design Information shows the dimensions (Height <sup>↑</sup> and Width <sup>↔</sup>), Stitch Count **≡**, and number of colors <sup>♣</sup> for the active embroidery.

#### Color Select

The Color Select area shows the order of the color blocks in the color worksheet and any notes that are included in the embroidery. Click on a color block to change thread colors and to add thread effects. Also use the color worksheet to show or hide stitches by color block, to move color blocks up  $\uparrow$  or down  $\clubsuit$  and merge sclor blocks. Edit or add information to the Notes and Settings as desired.

#### **Clipboard Block**

The Clipboard Block shows the embroidery that can be pasted into the work area.

Click in the Clipboard to remove the current Clipboard Block.

#### **Overview Window**

The overview window gives a small overview of the whole work area for the current embroidery.

See "Overview Window" on page 27.

## Status Bar

The status bar is found at the bottom of the window. Starting from the left, the status bar shows:

The QuickLink toolbar.

- The selection tools.
- The horizontal and vertical distance of the mouse pointer from the center of the embroidery.
- The hoop size.
- An indicator of the current function, which is blank when no function is active.
- The zoom tools and Zoom Bar.

# PREMIER+<sup>™</sup> 2 Modify Terms and Conventions

#### **On-screen** pointers

The mouse pointer is most commonly shown as an arrow  $\searrow$  on the screen.

If it is positioned over a text box it changes to an I-bar  ${\car{1}}$  and you can type, such as the Edit Notes dialog box.

If Zoom To Rectangle  $\square$  or Zoom In 1 in a dialog box is chosen, the Zoom In pointer 2 appears. If Zoom Out 2 is chosen in a dialog box, the Zoom Out pointer 2 appears. When zoomed in, if the Pan feature is used to move around the screen, the Pan cursor 1 appears.

The Box Select pointer  $\&_{\Box}$ , Freehand Select pointer  $\&_{\mathcal{P}}$  or Freehand Point Select pointer  $\&_{\mathcal{P}}$  appear when the associated Select function is chosen. Add to a selection with the Add to Selection  $\&_{\Box}$  pointer, and remove items from a selection with the Remove from Selection  $\&_{\Box}$  pointer.

There are several pointers indicating functions in the selection box. The Rotate pointer  $\bigcirc$  appears when the mouse pointer is over the Rotate handle  $\diamondsuit$ . The cross-hair pointer + appears when the mouse is over the center of rotation  $\oplus$ .

The diagonal double-headed arrow  $\leq_2$  pointer appears when the mouse pointer is over a square corner handle  $- \frac{1}{2}$ . The horizontal double-headed arrow  $\Rightarrow$  pointer appears when the mouse pointer is over the Flip Horizontal handle < 1. The vertical double-headed arrow  $\ddagger$  pointer appears when the mouse pointer is over the Flip Vertical handle A. The pointer becomes a four-headed arrow  $\circledast$  (the move pointer) when it is over a selection box.

The Insert Color Command pointer  $\checkmark \psi$  which places a Color Change O, the Insert Stop Command pointer  $\trianglerighteq_{\textcircled{O}}$  which places a Stop Command O, the Insert Trim Command pointer  $\And_{\textcircled{O}}$  which places a Trim Command O, and Insert Stitches pointer  $\diamondsuit_{\textcircled{O}}$  appear when the associated Modify Stitch function is chosen. When Tie On or Tie Off are used, the tie pointer  $\aleph_{\textcircled{O}}$  appears.

If the Freehand Tablet functions are used, the pointer becomes a pen  $\mathbb{N}$ . If the Freehand Point functions are chosen, the pointer becomes a circle  $\mathbb{N}$ . When nodes placed by either of the Freehand functions are adjusted, the pointer becomes a small cross  $\mathbb{N}_{\mathbb{H}}$  (a move pointer). The Freehand pointers are also used when drawing a split line for Design Separator  $\mathbb{Q}$ .

In the Object tab, the Object Select  $\[b]_{\Omega}$  pointer is shown. Insert points in an object with the Insert Point  $\[b]_{\Theta}$  pointer, and Delete Points with the delete points pointer  $\[b]_{\Theta}$ .

When using stamps, the pointer is the currently selected stamp.

The Measure pointer by appears when the Get Length 1? function is selected.

# **Touch Gestures**

Touch gestures are used when viewing and moving embroideries in the PREMIER+<sup>™</sup> 2 Embroidery System. They are available when using a touch-sensitive screen.

## General

#### Select and move

One finger touch and one finger slide are equivalent to click and drag with a mouse. Use to move embroideries, select, draw or create stitches with freehand features, and so on.

#### Autoscroll

When you drag within a document, the autoscroll feature moves the pointer automatically, changing the view of the work area.

This is useful when zoomed in. Use autoscroll while moving or resizing a selected embroidery.

Use a two finger swipe on the work area.

#### Pinch to zoom

Pinch two fingers to zoom in, and spread two fingers to zoom out.

#### Context menu

Press and hold and a context-sensitive menu will appear if available (similar to a rightclick).

## PREMIER+<sup>™</sup> 2 Embroidery and PREMIER+<sup>™</sup> 2 Modify only

#### Multiple select

Two finger touch will add or remove an embroidery in the current selection (similar to Ctrl+click).

#### Pinch to resize or scale

Pinch two fingers inside the selection box to reduce, and spread two fingers to enlarge the selected embroidery, lettering or SuperDesign.

Pinch outside the selection box to zoom.

#### Rotate

Twist your thumb and forefinger to rotate the selected embroidery, lettering or SuperDesign.

## **Embroidery File Formats**

PREMIER+<sup>™</sup> 2 Modify can load any of the following embroidery file formats: Bernina (.art version 1, 2, 3), Brother/Baby Lock/Bernina PEC (.pec), Brother/Baby Lock/Bernina PES (.pes version 2 - 10), Compucon/Singer PSW (.xxx), Husqvarna Viking / Pfaff (.vp4, .vp3 and .vip), Husqvarna (.hus, .shv and .dhv), Janome (.jef and .sew), Melco (.exp), Pfaff (.pcs), Tajima (.dst) and Toyota (.10\*).

PREMIER+<sup>™</sup> 2 Modify saves embroidery files in Husqvarna Viking / Pfaff (.vp4) format.

Embroideries may only be saved in .vp4 format as this will preserve the separate parts of multipart designs. It also preserves hoop, background, decorations and appliqué information, thread colors, and notes. PREMIER+<sup>™</sup> 2 Modify exports any of the following embroidery file formats: Husqvarna Viking / Pfaff (.vp4 and .vp3), Brother/Baby Lock/Bernina PEC (.pec), Brother/Baby Lock/ Bernina PES (.pes version 2 - 10), Compucon/Singer PSW (.xxx), Husqvarna Viking / Pfaff (.vp4, .vp3 and .vip), Husqvarna (.hus ,.shv), Janome (.jef, .sew), Melco (.exp), Pfaff (.pcs), Tajima (.dst) and Toyota (.10\*).

#### **Picture Files**

PREMIER+<sup>™</sup> 2 Modify can load any of the following picture file formats in the Background wizard for appliqué fabrics: Windows or OS2 Bitmap (.bmp), JPEG-JFIF Compliant (.jpg, .jif, .jpeg), Portable Network Graphics (.png), Tagged Image File Format uncompressed (.tiff, .tif), Windows Meta File (.wmf), Windows Enhanced Meta File (.emf) and Windows Icon (.ico).

PREMIER+<sup>™</sup> 2 Modify can upload pictures and videos of embroidery designs from Design Player and Life View to the social media sites Facebook<sup>®</sup> **f**, Flickr<sup>®</sup> **●●**, Twitter<sup>®</sup> **Y** and YouTube<sup>®</sup> **□**.

# **Hoop Selection**

Use Hoop Selection 🕕 to choose the hoop size you wish to use.

Select the ho	op size	C	hoose a ma	achine or hooj	o group
Add the hoop — to My Hoops	Hoop Selection Hoop Type Hoop Group: Hoop Size:	Universal 180mm x 130mm - Universal L Included in My Hoops		+	
			0	Cancel	Help

Enter a size for a custom hoop

Select the hoop orientation

Set the hoop size according to the size of your embroidery or the hoop you wish to use for stitching out, or enter any other desired size. The hoop information is stored in your .vp4 embroidery file, and used for your initial Export settings.

#### Shortcuts

- Quick Access Toolbar; Home Tab; View Tab:
- Keys: Ctrl + H; Alt, 6; Alt, H, H; Alt, V, H

## Hoop Group

The drop-down list of Hoop Groups shows all the machine Hoop Groups, and the My Hoops group, if used.

## Hoop Size

The drop-down Hoop Size list shows the hoops in the chosen Hoop Group. Select the desired hoop size and a picture of the hoop will be shown in the Preview.

## Included in My Hoops

Select (check) Included in My Hoops to add the selected hoop to the My Hoops list. Use the My Hoops list to create a list of your favorite hoops.

The selected hoops will be displayed in the My Hoops group in the order that they were selected.

## Orientation

Select Natural or Rotated orientation according to the shape of the embroidery that is to fit in the hoop. Natural orientation is similar to the way the hoop would appear when you sit in front of your machine; note the position of the bracket.

It is recomended to use natural hoop orientation for designs with Twin Needle colors.

## Enter Size

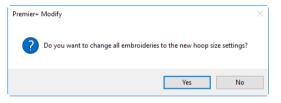

To enter a hoop size that is not listed in any of the Hoop Groups, click the Enter Hoop Size box so that it is selected (checked). The Width and Height boxes will become available. You can enter any size from 10mm to 4000mm. The preview shows the shape of the hoop you enter.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

## Changing Hoop Size

All new embroideries and embroideries that are opened after the change will use the new hoop size.

However, if you have more than one embroidery open when you change hoop size, you will be asked if you want to change the hoop size for all open embroideries.

Click Yes to change the hoop size for all open embroideries, or click No to change the hoop size for only the currently active embroidery.

# Managing Embroideries

Use New To create a blank embroidery work area, Open Pto load an existing embroidery in a new window, and Insert To open an embroidery into the current window.

When an embroidery is loaded in PREMIER+<sup>™</sup> 2 Modify, you will see the embroidery, appliqué areas and decorations. Most thread effects are not shown in the active subdesign. You will not see garment, quilt block or fabric backgrounds.

If you Open or Insert an embroidery containing design information such as Lettering or SuperDesigns, a warning message will appear saying that these items will be fixed as embroidery stitches. This warning message can be turned off in Preferences. See "Preferences" on page 258.

## New

Use New <sup>\*</sup> to create a blank embroidery work area in PREMIER+<sup>™</sup> 2 Modify. To open an existing embroidery, use Open <sup>\*</sup> or Insert <sup>\*</sup>.

Use a new embroidery to:

- Create a blank canvas on which to assemble parts from other embroideries.
- Paste an embroidery from another PREMIER+<sup>™</sup> 2 Embroidery System module.
- Hold temporary copies of blocks that you are working with.

You may create as many new embroideries as desired.

Use the tabs at the bottom of the work area to switch between multiple open embroideries.

#### Shortcuts

- File Menu: <sup>1</sup>
- Keys: Ctrl + N

# **Open Embroideries**

Use Open P to load individual files by thumbnail image, name or number into a new window. Use Insert S to insert an existing embroidery into your current project. Use Windows® Explorer to Load Embroideries with Drag and Drop. Open recently used embroideries with File, Recent. Use Paste R Paste into New Window, or Paste as Design to insert a file from the clipboard.

The following embroidery file formats may be loaded: Bernina (.art version 1, 2, 3), Brother/Baby Lock/Bernina PEC (.pec), Brother/Baby Lock/Bernina PES (.pes version 2 - 10), Compucon/Singer PSW (.xxx), Husqvarna Viking / Pfaff (.vp4, .vp3 and .vip), Husqvarna (.hus, .shv and .dhv), Janome (.jef and .sew), Melco (.exp), Pfaff (.pcs), Tajima (.dst) and Toyota (.10\*).

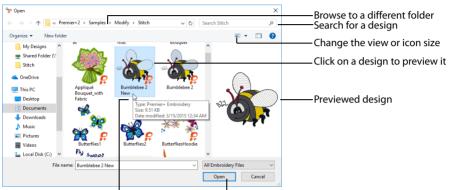

Only Husqvarna Viking / Pfaff (.vp4, .vp3 and .vip) embroidery files contain full thread color information that will be shown in the original thread colors. Other files that hold some color information, such as .hus, .shv, .dhv, .pcs, .pes, .sew and .xxx, are shown in the nearest match to the colors in which they were created. The shades are converted to the

Import Thread Range, as selected in PREMIER+<sup>™</sup> 2 Configure. For files that do not store colors, such as .dst, .exp and .10\*, the design will be shown in a default color sequence, using thread colors from the Import Thread Range.

Only one copy of each embroidery can be opened. If you attempt to open an embroidery again when it is already loaded then it will become the currently active embroidery.

## Open

Use Open Premark to load an existing embroidery in a new window. PREMIER+™ 2 Modify displays the Open dialog box so you can choose an embroidery to open. Alignment stitches will be retained.

Hover to view the selected design's details Click Open to load the selected design

Use Insert  $\overline{\mathbf{5}}$  to add an existing embroidery to a project.

The following options allow you to specify which file to open:

#### File Name

Type or select the filename you want to open. This box lists files with the extension you select in the Files Of Type box.

#### Files of Type

Select the type of file you want to open from the drop-down menu.

Look In Select the drive or folder containing the file that you want to open.

#### **More Options**

Switch from list 🔢 or details 📰 view to icons with thumbnail images of the embroideries. For example, Extra Large icons 🖬 .

#### Preview Pane

Preview the embroidery before opening .

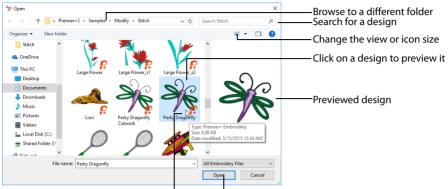

#### Shortcuts

File Menu: 💕

Keys: Ctrl + O

### Insert

Use Insert َ to add existing embroideries to the project in the current window. The Open dialog is displayed so that you can choose an embroidery to insert. Alignment stitches will be removed.

Hover to view the selected design's details

Click Open to load the selected design

#### Shortcuts

- Quick Access Toolbar; File Menu: 3
- Keys: Ctrl + I; Alt, 1

## Load a Dragonfly Embroidery

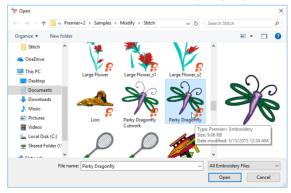

- 1 Click New 🛅.
- 2 Click the Hoop icon (), and ensure that the hoop is set to 100mm x 100mm Universal Square Hoop 1. Click OK.

If you are changing the hoop size and other embroideries are already open, a message will appear.

- 3 Click Insert 3.
- 4 In the Open dialog box, browse to the folder Documents\Premier+2\Samples\Modify\Stitch.
- 5 Click OK and the embroideries in the folder will be shown.

If desired, click Change Your View 📰 to view icons of the embroideries.

6 Scroll down to show the thumbnail of 'Perky Dragonfly'.

If you position the arrow pointer over a thumbnail without clicking, the details about the embroidery will be shown.

- 7 Click the 'Perky Dragonfly' picture and the embroidery will be selected.
- 8 Click Open to load the embroidery onto the screen.

## Load Embroideries with Drag and Drop

To drag and drop as many embroideries as desired onto the screen, use Windows® Explorer. Hold down the Shift key to select a consecutive group of embroideries. Hold down the Ctrl key to select individual embroideries.

## Drag an Embroidery to the Work Area

- Open an Explorer window in Windows®. If required, resize the Explorer window so you can see both Explorer and PREMIER+™ 2 Modify. In Windows® 10 and 8, click File Explorer on the Status Bar. In Windows® 7, right-click the Start button on the Taskbar, then click Explore.
- 2 Browse through the drives and folders of your computer to find the Documents\Premier+2\Samples\Modify\Stitch folder.
- 3 Click on an embroidery icon to highlight it. Hold down the Shift key to select consecutive files or Ctrl key to select multiple individual files.
- 4 Use the mouse to drag and drop the embroideries on the PREMIER+<sup>™</sup> 2 Modify screen. All the embroideries will be opened in separate windows in PREMIER+<sup>™</sup> 2 Modify. The last embroidery loaded will be displayed on the screen.
- 5 Close Windows® Explorer.

#### Recent

Use File, Recent to open previously used embroideries via the filenames listed in the Recent section of the File menu. Select the name of the desired embroidery.

# Switch Between Open Embroideries

*To switch between designs in the work area, see "Select, Move and Merge Designs" on page 147.* Switch between open embroideries using any of the following methods:

- Click the tab showing the embroidery name at the bottom of the work area.
- If the windows are not maximized, click anywhere on a window to switch to it.
- Press Ctrl + Tab or Ctrl + F6 to cycle through the windows in the order in which they were most recently viewed.

# Save Embroideries

There are four methods of saving embroideries, Save, Save As, Export and Save On Exit.

Use Save or Save As to retain a multipart project file. Use Export to save an embroidery for stitching out, or to save in a format other than .vp4.

## Save

Use Save 拱 to save the contents of the open window as a multipart embroidery in .vp4 format. If the embroidery has already been saved, this will save any changes using the existing name and folder.

Use Save for projects that you cannot Export, such as multipart embroidery projects with designs that do not fit in the selected hoop.

When first saving a new embroidery, this saves the embroidery with the name you give it in the Save As dialog.

Save will overwrite the existing embroidery. If you want to change the name and folder of an existing embroidery file before you save it, choose the Save As or Export functions.

#### Shortcuts

- Quick Access Toolbar; File Menu: 틙
- Keys: Ctrl + S; Alt, 2

#### Save As

Use Save As  $\mathbb{R}$  to save the embroidery as a multipart embroidery in .vp4 format under a new name. For instance, you might remove part of an embroidery and want to save the changed embroidery with a new name.

This displays the Save As dialog box so that you can save the embroidery with a new file name.

To save an existing embroidery file without changing its name, use Save 拱.

Shortcuts

- Quick Access Toolbar; File Menu: 🔜
- Keys: Ctrl + Shift + S; Alt, 3

# Export

Use Export 🛃 to save the embroidery in the current window as a flattened .vp4 file, or in an alternative embroidery format. The embroidery must fit in the currently selected hoop. Use the Design Player to see how the embroidery will be exported according to the current options.

You can customize the initial Export options in PREMIER+™ 2 Configure.

Export ×
File Format: Kusqvarna Viking / Pfaff (.vp4)
Optimize for Sewing Combine Remove Overlap ColoSort ColoSort Optionse Stitch Length: Doptions
Decoration © Create Center placement stitches O Create Line placement stitches Remove all decorations and placement stitches
Hoop Orientation Rotate to fit natural hoop position Flip design for felting or reverse embroidery
Splitting Options
OK Cancel Help

To export appliqué pieces, see "Export Appliqué Pieces" on page 23.

The preferred file format for exporting embroideries is Husqvarna Viking / Pfaff .vp4, as this will preserve background and appliqué information, thread color information and notes.

You can also export embroideries as Brother/Baby Lock/Bernina PEC (.pec), Brother/Baby Lock/Bernina PES (.pes), Compucon/Singer PSW (.xxx), Husqvarna (.hus ,.shv), Husqvarna Viking /Pfaff (.vp3, .vip), Janome (.jef and .sew), Melco Expanded (.exp), Pfaff (.pcs), Tajima (.dst) or Toyota (.10o).

The initial name will be the current file name with "Exported" added. The text "Exported" may be changed in PREMIER+<sup>TM</sup> 2 Configure.

Shortcuts

- Quick Access Toolbarl; File Menu: 📑
- Keys: Ctrl + E; Alt, 4

#### **Optimize for Sewing Options**

All of these options are initially selected when saving as a .vp4 file, or in any other format.

Combine: Merge the embroideries into a single embroidery during Export.

Combine is not enabled if there is only one design, and for embroidery formats that are automatically combined.

**Remove Overlap:** Prevent areas of stitches building up where embroideries overlap. Remove Overlap is not used if any of the designs contain appliqué.

Remove Overlap is not available when Combine is not enabled. Only deselect this option if, for example, your embroideries are low density and you wish to have a blend effect where they overlap.

**ColorSort:** Reduce the number of thread colors during Export. See "ColorSort" on page 37.

**Optimize Stitch Length:** Automatically remove small and insignificant stitches. See "Stitch Length Optimizer Options" on page 22.

Cutwork Needle lines in the Inspira Cutwork Needle "thread range" and Felting Needle Colors in the Inspira Felting Needle "thread range" are unaffected by Optimize Stitch Length.

#### Decoration

Create Center or Line placement stitches for Decorations added in PREMIER+<sup>™</sup> 2 Embroidery Extra, or remove all decorations and their associated placement stitches.

Center placement stitches are recommended when most decorations are individual and symmetrical. Line placement stitches are recommended when most decorations are individual and asymmetrical (such as bugle beads) or lines of closely spaced beads or sequins.

**Create Center placement stitches:** Create a small cross shape in stitches to show where the decoration is to be placed.

**Create Line placement stitches:** Create a single stitch that runs along the length of the decoration.

**Remove all decorations and placement stitches:** Remove all decorations and placement stitches from the exported version. This may be desired to create an embroidery with a complementary crystal transfer template (made using the Export Decoration Template dialog box in PREMIER+<sup>TM</sup> 2 Embroidery Extra).

#### **Hoop Orientation**

Set the hoop orientation.

**Rotate to fit natural hoop position:** Rotate the embroidery if needed to fit with the default hoop orientation for the machine. This option is only available if the hoop on the main screen is in the rotated orientation. It is useful if you prefer to create a "landscape" shaped project in the rotated orientation.

**Flip design for felting or reverse embroidery:** Flip the embroidery for being stitched in reverse. If an embroidery contains a Felting Needle color effect this option is selected initially. See "Felting Needle" on page 36.

#### Splitting options

Click the button to open the splitting options dialog box. See "Splitting for Multipart Hoops" on page 20.

Splitting for Multipart Hoops is available if .vp4, .vp3, .pes or .jef is chosen.

#### **Additional Sections**

Additional dialog options are available, depending on the chosen file format.

- If .pes is chosen, you can select your machine type, file version, hoop size and rotation.
- If .jef is chosen, you can select your machine type, hoop size and rotation.

#### OK

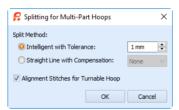

View the Save, or Saving As dialog, depending on the selected file format.

## **Export an Embroidery**

- 1 Create an embroidery project.
- 2 Save the embroidery. See "Save" on page 17.
- 3 Click Export 
  Solution Click Export Click Export Click Export 
  Solution Click Export
- 4 Select an embroidery format from the drop-down list.
- 5 Select your optimization options.
- 6 If you are using a multipart hoop, click Splitting Options and set Intelligent or Straight Line split.
- 7 Click OK.
- 8 The Save As dialog will appear. Save the embroidery as desired.

## Splitting for Multipart Hoops

Note: This dialog is available if .vp4, .vp3, .pes or .jef is selected as the file format.

Embroideries for Multipart hoops are split automatically, according to your Export settings. Use an Intelligent or Straight Line Split.

*Note:* There is no need to ensure embroideries are in one stitch area of the hoop; just place your embroideries in the most pleasing arrangement.

#### Split Method

You can use one of two split methods:

- Intelligent Split automatically calculates a split line that is routed through gaps or across movement stitches, cuts the minimum number of stitches, and minimizes cuts through solid sections of embroidery. Where possible, use Intelligent Split.
- Straight Line Split cuts the embroidery straight across the center line of the overlap zone.

#### Intelligent with Tolerance

Intelligent Split calculates a split line that cuts the minimum number of stitches, and minimizes cuts through solid sections of embroidery. For example, a large embroidery is split at a narrow section, and an embroidery that fits in one stitch area of the hoop is left in one piece even if it is part of a larger design.

**Tolerance** ensures that the Intelligent Split line stays a short distance from the edges of the overlap. This allows for play in the hoop when going from one hoop area to another, such as when aligning a hoop that has been turned to stitch out the other side of an embroidery.

You can set Tolerance from 0 to 3mm, in steps of 1mm. The initial setting is 1mm.

To use Intelligent Split with Tolerance, select the "Intelligent with Tolerance" checkbox, then enter a number in the Tolerance number box, or use the arrows to increase or decrease the Tolerance.

#### Straight with Compensation

Straight Line Split cuts straight across the center of the overlap zone. Straight Line Split will only split an individual embroidery if, before it is combined with everything else, it does not fit entirely into one stitch area of the hoop.

Lettering is split straight down the middle, as with any other type of embroidery. This may cut through characters rather than gaps and spaces. In such cases, it is recommended to use Intelligent Split instead. **Compensation** adds overlapping stitches along the edges where the embroidery is split. This compensates for pull on the fabric.

None	Use None if you can split an embroidery without cutting through any of the design elements. Compensation is initially set to None.
Low	Use Low when cutting through a lightly stitched embroidery or when the split lines go through only a few stitch areas.
High	Use High when the embroidery is dense, when the split lines make long splits through stitch areas, or when stitching onto materials such as knitted or stretchy fabric.

#### Alignment Stitch for Turnable Hoops

Select this option to add an alignment cross at the end of each embroidery section when using the HUSQVARNA VIKING<sup>®</sup> Designer Majestic<sup>™</sup>, PFAFF<sup>®</sup> creative Grand Dream<sup>™</sup>, Universal Multipart hoop, or Brother Jumbo Frame. A hoop movement to the alignment cross is added at the beginning of the next section. The next embroidery section can then be correctly aligned, or alignment can be confirmed.

## Stitch Length Optimizer Options

Use the Stitch Length Optimizer Options dialog box to automatically remove small and insignificant stitches. You can adjust the stitch removal sensitivity, or the minimum significant stitch length.

异 Stitch Length Optimizer Options	×
Stitch Removal Sensitivity: O Low Medium High	
Minimum Significant Stitch Length: 0.6 mm 0.8 mm 1.0 mm Cutwork Needle Colors will not be affected by the Stitch Length Optimizer.	
OK Cancel Help	

#### Stitch Length Sensitivity

Adjust the sensitivity of the optimization. Low is set as the default.

Choose from Low, Medium or High.

#### Minimum Significant Stitch Length

Select the shortest stitch length that you consider to be significant. Stitches below this length are removed during the optimization process. The default stitch length is 0.8 mm.

Cutwork Needle lines and color blocks with the Felting Needle thread effect are unaffected by the Minimum Significant Stitch Length.

Choose from 0.6 mm, 0.8 mm or 1.0 mm.

## **Export Appliqué Pieces**

Use Export Appliqué Pieces  $\Rightarrow$  to save or print appliqué outlines ready for cutting. Select the desired method and options, then clck the Export or Print button at the bottom of the dialog box.

🗜 Export Appliqué Pieces 🛛 🗙	
Export for Cutter  File Format:  SVG DXF FCM Units of Measurement:  Millimeters (nm) Inches (*) Points	Export an SVG, DXF or FCM file for use in a fabric cutter
Export for Cutwork Needles  Method:  2 Cutwork Needles  4 Cutwork Needles	Use 2 or 4 cutwork needles
Cutwork Line:  Indude Secure Points Distance Between Secure Points: 30 mm	Add secure points for fabric stability
File Format:  VP4 VP3	— Export a .vp3 or .vp4 stitch file
Print Templates Print Setup	—— Print as an outline template for cutting out
Print Applqué Pictures	—— Print onto printable fabric or an iron-on transfer
Export for Custom Layout Save as PNG image files to open and arrange in your preferred graphics package.	Save as a SVG custom layout with fabric images
Export Cancel Help	

There are five appliqué piece export methods:

- **Export for Cutter:** Save as SVG, DXF or FCM files for use in fabric cutters
- Export for Cutwork Needles: Save as VP4 or VP3 stitch files that can be used with INSPIRA<sup>™</sup> Cutwork Needles
- Print Templates: Print as an outline template to stick or pin to fabric and then cut out
- Print Appliqué Pictures: Print directly onto printable fabric or an iron-on transfer; this also prints the image of the appliqué piece
- **Export for Custom Layout:** Save as SVG files with the fabric image placed as the fill for each shape. This is designed for use with fully customized layouts.

#### **Export for Cutter**

Export the appliqué piece as an SVG, DXF or FCM image file for use in a fabric cutter.

Set the units of measurement (millimeters or inches), and select a file type. Click Export to save the file.

The maximum size for the Brother ScanNCut FCM format is 12" x 12" (305mm x 305mm).

Recommended file formats for cutters:

Cutter	Software	Export Format
Cricut Explore®	Cricut Design Space 1.091	DXF (inches)
KNK Zing Air®	Make the Cut! 4.6.1 (Zing Plugin 2.1.0)	SVG (inches)
Silhouette Cameo®	Silhouette Studio 3.6.39 ss	DXF (millimeters)
Brother ScanNCut®	ScanNCutCanvas 2.1.0	FCM

#### Export for Cutwork Needles

Export the appliqué piece for cutting with INSPIRA<sup>™</sup> Cutwork Needles. Select 2 or 4 needles, choose whether to use secure points for fabric stability and their length, and use a .vp3 or .vp4 stitch file.

#### **Print Templates**

Print the appliqué piece as an outline template to stick or pin to fabric and then cut out.

Select a printer and paper size in the Print Setup dialog box. See "Print Setup" on page 255.

#### Print Appliqué Pictures

Print directly onto printable fabric or an iron-on transfer; this also prints the image of the appliqué piece.

Flip the picture for an iron-on transfer, and select a printer and paper size in the Print Setup dialog box. See "Print Setup" on page 255.

#### Export for Custom Layout

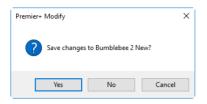

Save as SVG files with the fabric image placed as the fill for each appliqué piece shape. This is designed for use with fully customized layouts, for example if you wish to arrange the shapes in your cutter software or in another graphics package.

#### Shortcuts

- 🔹 🛛 File Menu: 🔂
- Keys: Ctrl + Shift + E

## Save On Exit

If you make changes to an embroidery, then try to close the embroidery before saving the changes, a message will appear, asking if you want to save the changed embroidery.

If you exit PREMIER+<sup>™</sup> 2 Modify then you will be asked about each embroidery that you have changed without saving. Choose between:

Yes	Save the changes to the embroidery. If it is a new embroidery, the Save As dialog box appears.
No	Do not save the embroidery and continue. Any changes to the embroidery are lost. If it was a new embroidery then it is discarded without being saved.
Cancel	Do not save the embroidery, but keep the embroidery open and do not close PREMIER+™ 2 Modify.

# **Close Embroideries**

When you have finished working on embroideries, you may close them without closing PREMIER+<sup>™</sup> 2 Modify. Close embroideries individually, or close all <u></u>embroideries in a single operation.

## Close

Use Close 🗙 on the File menu to close the currently active embroidery. If there are unsaved changes in the embroidery, you will be prompted to save changes.

Alternatively, if the embroidery window is maximized, click the file Close icon  $\times$  in the top left corner of the window, which is below the Close icon for PREMIER+<sup>m</sup> 2 Modify. If the embroidery window is not maximized within the work area, click the Close icon  $\times$  on the title bar for the embroidery window.

Shortcut

Keys: Ctrl + F4

# Viewing Embroideries & Threads

#### View Tab Show and adjust the grid View command markers View the Design Panel Modify Object Home Border Appliqué Embo View Help 3D View Show Design Panel P # 📰 🖽 🖻 C<sub>1</sub> xν 150.0 mm x 150.0 mm 2D View with Stitch Points 5 mm \$ Get Commands Coordinates Change Hoop Cascade 2D View without Stitch Points Mr. Grid Design Panel Set grid size Change the view mode Select a different hoop Measure the design View the coordinates of stitch points View multiple designs

# **Design Select**

Use the Design Select area of the Home tab to view the different sections or subdesigns of a multipart design. The selected section is displayed in the work area. To move subdesigns within the multipart design, see "Select, Move and Merge Designs" on page 147.

Standard embroidery subdesigns are numbered. Decoration subdesigns are labeled with the letter "D", and Alignment subdesigns are labeled with the letter "A".

Automatic Ghost Mode is used to show the position of the other parts of the design in the work area. To select sections of a multipart design:

- Click Next Design Design or press the Tab key to see the next subdesign.
- Click Previous Design or press the Tab key to see the previous subdesign.
- Click the desired section of the design in the Design Select area.

To see all subdesigns, click the arrow at the bottom right of the Design Select area.

## **Overview Window**

The overview window at the bottom of the Design Panel gives a small overview of the whole work area for the current embroidery window.

When you zoom in, a box is shown around the area that is currently visible in the main window. Click and drag the box to move to another part of the window.

If there are stitches hidden for the current embroidery, these will also be hidden in the Overview Window.

# View Mode

Use View Mode in the View tab to toggle between 3D View 3D, 2D View with Stitch Points 2, and 2D View without Stitch Points 2, for the current window. Stitches and blocks can be edited in both 3D and 2D stitch display.

Use 3D View to see how the embroidery will be stitched, use 2D View with Stitch Points to see stitch points clearly, and use 2D View without Stitch Points to see the stitch lines.

## 3D View

Use 3D View 30 to see embroideries and grid in standard 3D mode. The stitches of the embroideries have three-dimensional shading.

#### Shortcuts

- View Tab: 30
- Keys: Alt, V, 3

## 2D View with Stitch Points

Use 2D View with Stitch Points 2 to see the individual stitches in your embroideries as lines with no shading, and to display the black dots that show the stitch points (needle insertions) into the fabric.

When you zoom in, the stitch points are displayed as small squares. Showing the stitch points may be helpful for inserting new stitches, moving stitches and pasting stitch blocks.

Shortcuts

- View Tab: 29
- Keys: Alt, V, 2V

## 2D View without Stitch Points

Use 2D View without Stitch Points 22 to see the individual stitches in your embroideries as lines with no shading or stitch points.

Shortcuts

- View Tab: <sup>2D</sup>/<sub>1</sub>
- Keys: Alt, V, 2W

# Commands

Use Commands 🐉 to show or hide the command markers for Color Change 🔘, Stop 🕲, Appliqué 💿 and Trim 💿.

The markers are no longer visible, but the commands will still be present in a selection or stitch count.

If Delete Commands 🔯 is used, all commands will be visible while it is selected.

Shortcuts

- View Tab: อ
- Keys: Alt, V, CO

# **Ghost Mode**

Use Ghost Mode 📰 to display pale 'ghost' stitches where there are hidden stitches within the active subdesign. This allows you to see the overall embroidery and the placement of the visible stitches within the embroidery while working only with the visible stitches.

Ghost Mode On

Click the Ghost Mode icon to turn the pale ghost stitches on and off. Ghost Mode may be turned on and off individually for the active subdesign in each of the open embroidery projects. (Other subdesigns within a multipart design are always shown in Ghost Mode.)

If the background is white or very pale it may be difficult to see the 'ghost' stitches.

Shortcut

Control Strip: M

# Background Grid

Use the grid options to turn the background grid on and off, optionally with numbered grid lines. The grid may be used to help align stitches, adjust selected blocks, draw border shapes precisely and so on. The grid options are:

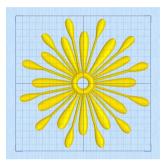

- Grid On :: show the grid
- Grid Numbered Half III : show the grid with numbers on the even grid lines at the top and left of the grid
- Grid Numbered Full : show the grid with numbers on the even grid lines on all sides of the grid

#### Grid Off Jail in the grid

Each time the grid icon is clicked, the next grid option is selected. The grid is initially set to Grid Numbered Half. All open embroideries use the same grid option, and the setting is remembered for the next PREMIER+<sup>™</sup> 2 Modify session.

The grid is initially set at 5mm intervals, so the apparent size will vary depending on the size of the currently active embroidery and the zoom level. Adjust its size between 2mm and 50mm in the View tab.

If Inches are chosen for Show Measurements in PREMIER+ $^{\text{m}}$  2 Configure, the nearest equivalent Grid Size is shown in inches in the View tab.

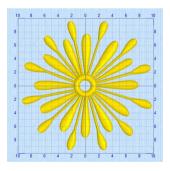

Grid On

Use Grid On it to show the grid.

Shortcuts: View Tab: Keys: Alt, V, GO

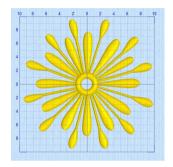

Use Grid Numbered Full to show the grid with the even grid lines numbered on all sides. Shortcuts:

View Tab: 🎆 Keys: Alt, V, GF

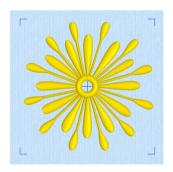

#### Grid Numbered Half

Use Grid Numbered Half **t** to show the grid with the even grid lines numbered on the top and left. Shortcuts:

View Tab: 🎹 Keys: Alt, V, GN

Use Grid Off \Bigg to hide the grid.

Shortcuts: View Tab: Keys: Alt, V, GR

### Grid Size

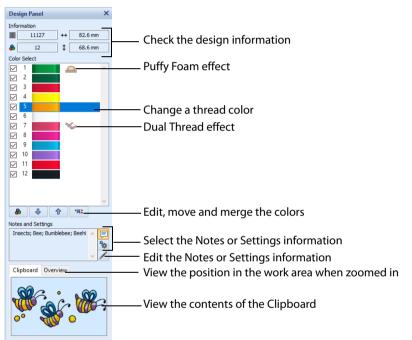

Set the grid size between 2mm and 50mm, depending on what setting is most suitable for your screen resolution and embroideries. Type in a figure or use the up and down arrows to change the number.

The initial setting is 5mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

## Design Panel

Use the Design Panel to change colors, to view and change the Notes and Settings, and to view the Clipboard and Overview window.

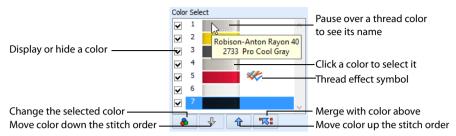

#### Show Design Panel

To open or hide the Design Panel, click Show Design Panel in the View tab.

- Design Information: See "Design Information" on page 53.
- Thread Colors: See "Change an Existing Thread Color" on page 33.
- Edit, move and merge colors: See "Move and Merge Color Blocks" on page 36.
- Notes and Settings: See "Notes and Settings" on page 53.
- Overview Window: See "Overview Window" on page 27.
- Clipboard: See "Clipboard Block" on page 77.

## **Thread Colors**

The thread colors are shown in the color worksheet on the Design Panel, in the order in which they are used. Any thread effects or special needles used with a color are also indicated.

Colors can be added or changed using any color available in the standard thread ranges and MyThreads. MyThreads can contain threads copied from the standard thread ranges, plus custom threads based on existing threads or added as completely new threads.

A Color Change command () is shown in the embroidery by a small blue circle with a C.

To add a color change, use Insert Color Command 🎇. See "Insert Color Command" on page 71.

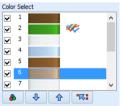

### **View Selected Colors**

There are several methods for changing which stitches are displayed. Displaying the stitches according to their color is an easy method of showing parts of an embroidery.

Hide stitches according to color, leaving the visible stitches available for functions such as stamping without affecting the hidden stitches. If desired, use Ghost Mode **W** to show the overall shape of an embroidery while working only on visible stitches. Selecting colors for display can be combined with the Draw Range to display a particular set of stitches that would be difficult to isolate with other functions.

### **Color Worksheet**

The color worksheet on the Design Panel shows the order in which the thread colors are used. A group of stitches using a particular thread color is called a color block. Each new color corresponds to a Color Change () command in the embroidery. There can be unlimited color changes in an embroidery saved in .vp4.

The color worksheet can be used to change thread colors, to hide and show the stitches in any of the color blocks, and to add thread effects. The numbers show the order in which the colors are used. See "Change the Colors in a Bumblebee Embroidery" on page 40.

When you pause the arrow pointer over a thread color in the worksheet, the corresponding threads in the embroidery are highlighted. Also, a popup description of the thread color appears. To show only the selected color, right-click the color block and select Show only this Color from the context menu.

The color worksheet can also be used to change the order of the color blocks, and to merge color blocks. See "Move and Merge Color Blocks" on page 36.

The first color in the embroidery is at the top of the list. The check boxes show which color blocks are hidden. The numbers show the order in which the colors are used, and the samples show solid blocks of each thread color in 3D.

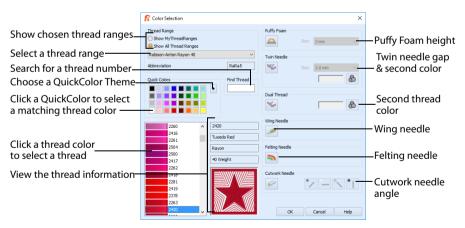

Double-click a thread sample, or select the thread and click the change color icon **a** to access the Color Selection dialog box and select a different thread color, or add thread effects. Click a check box to show or hide a color block, as shown here:

The number of color blocks shown in the color worksheet varies with the size of the window. If there are many colors, use the scroll bar to see the desired section of the list.

## Change an Existing Thread Color

The Color Selection dialog box will appear when you double-click a thread color in the color worksheet, or select a thread and click the Change Color icon . You may choose any thread shade from the available thread manufacturers' palettes (for instance, Sulky Rayon 40 or Robison-Anton Cotton 50) or a thread you have added to MyThreads. Select colors by visual selection or by typing in a shade number. Alternatively, click one of the Quick Colors to select the nearest matching thread color. Once the desired color is selected, click OK. (See "Quick Color Themes" on page 117.) Optionally, add a thread or needle effect to the selected color block.

When you select a new thread color, the color worksheet will show the change and the work area will show the block of stitches in the new color (assuming the stitches are not hidden).

### Change a Thread Color

1 Click a color that you want to change in the color worksheet. The color block will be highlighted.

2 Click the Change Color icon below the color worksheet. The Color Selection dialog box will appear.
Alternatively, double-click the color block, or right-click the color block and choose Change Color from the

Alternatively, double-click the color block, or right-click the color block and choose Change Color from ta context menu.

- 3 If required, change the thread range. Select the desired thread range from all thread ranges or only MyThreadRanges. The available shades for the thread range will be shown in the list. The Abbreviation shows the reference used for the thread range when threads from that range are added to MyThreads.
- 4 Click a color in the list to select a thread shade visually. You can use the scroll bar to browse through the list of threads.
- 5 If you know the shade number, click in the Find Thread box then type the required shade number.
- 6 Alternatively, choose a Quick Color Theme then click the desired Quick Color. The nearest shade that is available from the current thread range will be selected. This is also a quick way to jump to threads of that color (for example, click light yellow in the Standard Theme to jump to light yellow thread shades).
- 7 If desired, add a thread or needle effect. Then click OK to confirm the color selection. The dialog box closes, and your changes are displayed in the work area.

### Effects

Use the thread effects area on the right side of the Color Selection dialog box to show the results of using thread effects or special needles.

<u>_</u>	Puffy Foam	Show the effect of stitching over embroidery foam
***	Twin Needle	Show the effect of using a twin needle
*	Dual Thread	Show the effect of using two threads in one needle
	Wing Needle	Show the effect of using a wing needle for hemstitch or heirloom designs
-	Felting Needle	Show the effect of using a felting needle with a roving fiber
-	Cutwork Needle	Select a cutwork needle in one of four angles

Only one thread effect can be used on any thread. In  $PREMIER+^{m} 2$  Modify, most thread effects are not shown in the active subdesign, as it would be difficult to edit the stitches. They are shown in Design

Player 🔁 and Life View 🧿, as well as in the subdesigns of the active embroidery that are not selected. Choose a thread effect. If you choose Puffy Foam, set the foam height. If you choose Twin Needle, set the Twin Needle size. Click the color icon for the Second Color if you wish to use a different thread color. For Dual Thread, it is recommended to change the Second Color. For Twin Needle, this choice depends on the desired result. For Felting Needle select a color for the roving fiber for felting. For Cutwork Needle, choose the angle for your needles.

#### **Puffy Foam**

Use Puffy Foam to show the three-dimensional effect of stitching over embroidery foam.

Click the drop-down arrow and select the height of the puffy foam, between 2.0mm and 6.0mm. The height is initially set to 3.0mm.

This is only available if the Twin Needle effect is selected for the current color block. Click the drop-down arrow and select the size of the gap between the twin needles. This is initially set to 3.0mm.

Preview the effect of changing the twin needle size to help decide which needles to buy. Ensure that the desired size is recommended for embroidery on your machine.

#### Dual Thread

Use Dual Thread to show the effects of stitching out two threads through the same needle. This is particularly suited to blending threads for special effects, such as mixing a rayon thread with a metallic thread, as in the center of the star.

#### Second Color

The second color is initially set to the same color as the original color block. Click the change color button 🔒 to choose a different thread for the second color. The Color Selection dialog box appears. Select the desired thread and click OK. The thread sample will change, and the thread range and thread number are shown.

#### Wing Needle

Use Wing Needle 🥒 to show the effect of stitching out the color block with a wing needle and the chosen thread.

The wing needle creates holes in the fabric, for hemstitch and other heirloom techniques.

To see the holes more than the stitch, use a fine thread such as Poly 60 weight. To see the actual stitching, Rayon 40 weight is ideal.

#### Twin Needle

Use Twin Needle to show the effect of stitching out the color block with a twin needle. This creates a horizontal offset between the original thread color in the left-hand needle, and a second thread color in the right-hand needle.

There are several ways that the Twin Needle effect can be used, including:

- Use with running stitch to create a ribbon effect, typically using the same thread color in both needles
- Use with a low density fill area to blend two different thread colors and also have a lightly shadowed effect
- Use with a dense fill area to create a shadow effect

It is recommended to use natural hoop orientation for designs with Twin Needle colors.

#### Twin Needle Size

36

#### **Felting Needle**

Use Felting Needle show the effect of embellishing the selected color block using a felting needle and a contrasting roving fiber.

Choose a color for the roving fiber for the felting in the Color Selection dialog box. In projects without a roving fiber, choose a felting needle color similar to the back of the fabric.

If a system Font or SuperDesign with Felting Needles is chosen in PREMIER+™ 2 Embroidery, or if you select Felting Needle in PREMIER+™

2 Create the stitching will be adjusted. In other modules the effect is purely visual; for example, to see how felting will look in a pre-made design.

When Exporting an embroidery with a Felting Needle effect, the option "Flip design for felting or reverse embroidery" is initially selected in the Export dialog box. See "Export" on page 18.

### **Cutwork Needle**

Use Cutwork Needle we to show the line that would be used by cutwork needles to automatically cut holes in your fabric areas, or create appliqué areas. Use cutwork needle lines for reverse appliqué embroideries and free-standing lace, or simply to cut out a shape or design.

Choose the cutting angle for the cutwork needle.

(When creating cutwork needle lines in PREMIER+<sup>™</sup> 2 Modify or PREMIER+<sup>™</sup> 2 Create, or converting running lines to cutwork needle lines in any PREMIER+<sup>™</sup> 2 module, you

may use two needles, or for more precise work use four needles.)

### Move and Merge Color Blocks

Use the arrows below the color worksheet, or the right-click context menu, to change the order of the color blocks, and to choose color blocks to merge together selectively.

For example, you can keep two adjacent identical color blocks in case you wish to vary them later. If you use ColorSort, all identical colors will be merged unless there are overlapping stitches, or one block has a thread effect.

The changes you make are applied immediately.

This may be useful if you want to merge two blocks of an identical thread color without affecting the color order of the rest of the embroidery. Alternatively, the Move and Merge color blocks functions may be useful if ColorSort does not merge colors owing to a few overlapping stitches that do not affect the design stitchout.

You can also use Merge when optimizing designs with multiple areas of cutwork and stabilizing lines. ColorSort may occasionally merge stabilizing lines in these circumstances. See "Use a Cutwork Line for Dragonfly Wings" on page 143.

### Move and Merge Colors in the Worksheet

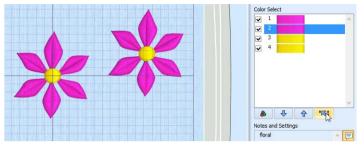

PREMIER+<sup>™</sup> 2 Modify Viewing Embroideries & Threads

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Pink' embroidery.

- In the work area, select the embroidery uisng one of the select options in the status bar, then Duplicate it. Move the two copies apart. The colors in the worksheet are repeated for the second embroidery.
- 5 Click to select the third color in the color worksheet, a pink. When you move the pointer over the color block the petals of the second copy of the flower are highlighted in the work area.
- 6 Click Move Color Up ☆ below the worksheet to move the block up the stitching order. Alternatively, right-click the color block and select Move Color Up from the context menu.

You can use the down arrow 😻 to move a block down the stitching order.

With the color still selected, click Merge into Previous Color 555 to merge the selected color block with the block above it.

This will remove the Color Change command.

Use Merge to delete color changes easily. Also use it to merge color blocks with the same thread color, after first moving one of the color blocks so that they are adjacent.

#### **Move Colors**

7

The Move Color Up 😭 and Move Color Down 😻 buttons move the selected color block so that the colors are stitched in a different order. Click the required color in the list and it will be highlighted, then click the Move Color Up or Move Color Down button to move the color to the required position.

Alternatively, right-click the block and select Move Color Up or Move Color Down from the context menu.

#### **Merge Colors**

The Merge into Previous Color button se will merge the selected color block with the color block above it, removing the Color Change command.

Alternatively, right-click the block and select Merge into Previous Color 🐝 or Merge into Next Color from the context menu.

Use Merge to delete color changes. Also use it to merge color blocks with the same thread color, after first moving one of the color blocks so that they are adjacent.

### ColorSort

Use ColorSort **\*\*** to reduce the embroidery to the minimum number of color blocks. The final number of color blocks produced in the ColorSort process can vary, depending on any overlap between areas, or whether thread effects are used. If possible, it leaves only one color block for each thread color used. If necessary, trims are added to connect the areas that use the same thread color. Unnecessary Color Change commands are removed.

Alternatively, you can use the ColorSort option in Export 📑 to merge your color blocks when creating an embroidery file for stitching out.

ColorSort affects the whole of the embroidery, even if only part of it is visible. All stitches in the embroidery will be shown when the ColorSort is complete.

If desired, click Undo to return to the original colors.

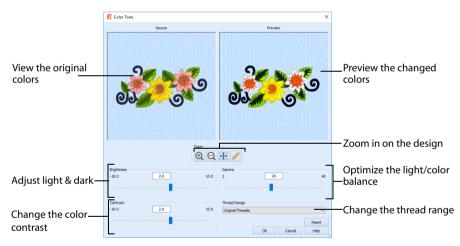

#### Shortcuts

- Tools, Home Tab:
- Keys: Alt, H, CL

## **Color Tone**

Use Color Tone **T** to change the thread colors in an embroidery. The Color Tone dialog box includes the Brightness, Contrast and Gamma sliders, and the Thread Range box.

Try different settings to enhance different designs. You may also combine more than one Color Tone tool. Use the Thread Range box to convert all the threads in the embroidery to a new thread range, with or without adjusting the Color Tone options. Thread and needle effects will not be removed.

#### Shortcuts

- Tools, Home Tab:
- Keys: Alt, H, CT

### Use Color Tone to Change the Colors in a Floral Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Premier+2Emb\Stitch2\Flowers load the 'Floral Motif' embroidery.
- 4 Click Color Tone 📑 in the Home tab. The Color Tone page is displayed.
- 5 Move the slider to the right to change the Brightness to 2. Alternatively, click to select the slider and use the right arrow key or or

Alternatively, click to select the slider and use the right arrow key, or enter a positive number in the box.

You can adjust the Brightness between -10 and +10 relative to the starting point by typing in a number, using the left and right arrow keys, or by clicking and dragging the slider bar. To darken the embroidery, move the slider to the left, use the left arrow key, or enter a negative number in the box.

- 6 Enter 2.0 in the number box to change the Contrast. You can adjust the Contrast between -10 and +10 relative to the starting point by typing in a number, using the left and right arrow keys, or by clicking and dragging the slider bar.
- 7 Click the Gamma slider bar to select it, then use the right arrow key to change the Gamma to 20. You can adjust the Gamma between 2 and 40 by typing in a number, using the left and right arrow keys, or by clicking and dragging the slider bar.
- 8 To adjust the threads used, select a new range from the Thread Range drop-down list. The threads in the design will be mapped to the nearest color in the range, and the result shown in the preview pane.

You can return to the original thread range(s) used in the design by selecting 'Original Threads'.

9 When the picture of the embroidery in the preview window at the right appears as desired, click OK.

### **Brightness**

The Brightness effect makes the selected part or all of an embroidery lighter or darker than the original. Use it to lighten embroideries.

Adjust Brightness from -10 to +10 in steps of 0.1. The default setting is 0.

### Contrast

The Contrast effect changes the amount of shading between areas for the embroidery. Use it to make specific areas stand out. Adjust Contrast up to +10 or -10 more or less than the original. Increasing the setting will increase the darkness of dark areas and the lightness of light areas.

Adjust Contrast from -10 to +10 in steps of 0.1. The default setting is 0.

### Gamma

Use Gamma to adjust the brightness and contrast together so that dark areas are made brighter, but bright areas are not overexposed.

Adjust Gamma from 2 to 40 in steps of 1. The default setting is 10. Lower values will make the embroidery appear lighter.

#### Thread Range

Use the Thread Range box to select the thread range used for the embroidery from the drop-down list.

Choose from any of the manufacturer's thread ranges or the MyThreads ranges you create using PREMIER+<sup>™</sup> 2 Thread Cache.

If the embroidery originally used more than one thread range, only one thread range will now be used. To return to the original thread range(s) used in the design select 'Original Threads' from the top of the list.

#### Reset

Reset the embroidery back to the original settings.

### Zoom

Use the Zoom functions to change the view of the embroidery.

Use Zoom In 🔁 to magnify the view. Move the pointer over the embroidery and the pointer changes to the zoom in pointer 🔍 . Then either click a point you want to zoom in towards, or click and drag a rectangle around the area you want to zoom in to and release the mouse button to zoom. When zoomed in, use the scroll bars to move around.

Use Zoom Out  $\bigcirc$  to shrink the view. Move the pointer over the embroidery and the pointer changes to the zoom out pointer  $\bigcirc$ . Then click a point you want to zoom out from.

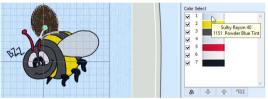

Click Zoom To Fit 🔠 to fit the embroidery to the preview area.

Click Real Size  $\checkmark$  to view the embroidery at a magnification as close as possible to the Real Size setting you chose in PREMIER+<sup>m</sup> 2 Configure  $\blacksquare$ .

### Change the Colors in a Bumblebee Embroidery

The bumblebee uses a very pale blue pattern fill for the wings. If a less dense fill is used, a darker thread will be easier to see.

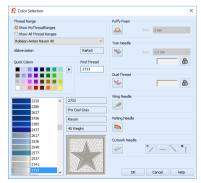

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 In the Design Panel move the arrow pointer over the very pale blue at the top of the color worksheet (color 1) and pause for a moment. The upper wing in the embroidery is highlighted, and a popup description of the thread is displayed.

5 Right-click the color block and select change color from the context menu. The Color Selection dialog box will appear.

Alternatively, double-click the color block to open the dialog box.

- 6 In Thread Range, ensure that Show MyThreadRanges is selected.
- 7 Select Robison-Anton Rayon 40 from the drop-down list.
- 8 Click in the Find Thread box and enter '2733'. Thread color 2733 (Pro Cool Gray) will be found in the list.
- 9 Click OK to change the color, and close the dialog box.
- **10** Move the arrow pointer over the other block of pale blue (color 4), and click to select it.
- 11 Click the Color Change icon 🔊 at the bottom of the color worksheet to open the Color Selection dialog box.
- **12** In Thread Range, select Robison-Anton Rayon 40 from the drop-down list.

- Click in the Find Thread box and enter '2733'. Thread color 2733 (Pro Cool Gray) will be found in the list. Click OK to change the color. Both of the bumblebee's wings are now the same gray. You can use Color Tone to change all of the colors in an embroidery to a different thread range.
   Click Calar Tara The in the Hame the The Calar Tara mage is disclosed.
- 14 Click Color Tone 📴 in the Home tab. The Color Tone page is displayed.
- 15 In the Thread Range drop-down list, select Robison-Anton Rayon 40. The thread shades change a little.
- 16 Click OK to close the Color Tone dialog box.

## Monochrome

Use Monochrome **31** to change all visible stitches to one color. The Monochrome effect creates silhouette and cameo designs from multicolored embroideries.

Select the stitches that you want to set to the same color, then click Monochrome 2. The Color Selection dialog appears so you can choose a color and/or thread effect.

#### Shortcuts

- Modify Design, Modify Tab: 32
- Keys: Alt, M, MO

### Create a Monochrome Embroidery from a Multicolor Design

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Deco Flower Corner' embroidery.
- 4 In the Modify tab, click Monochrome 2. The Color Selection dialog box opens.
- 5 In the Quick Colors click the orange in row 4, column 6.
- 6 Click OK to select the color. The complete embroidery is now orange. Monochrome only changes visible stitches. If you use the sliders or other functions to hide some of the stitches, the color of those stitches will not be changed.

## Control Strip

Draw stitches from here

13272 🗘

Set numbers for the start and end stitches

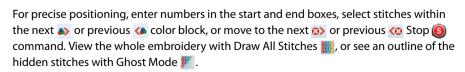

2222

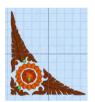

Use the Control Strip to view the colors in the selected subdesign, and to select stitches using the handles on the slider bar.

H 444 44 4 II > H> H> H

Play through the visible stitches Show only the previous/next color

View where commands are placed

Ghost Mode: see an outline of hidden stitches

Switch the visibility of color blocks

Show the previous/next Stop command

Draw stitches to here

Draw all stitches

Use the Stitch Player to view how the selected subdesign will be stitched out, using Pause for Commands 📸 to view where Color (), Stop () and Trim () commands will be placed.

Use Design Player  $\triangleright$  to view how the complete project will be stitched out, using the Optimize for Sewing settings from PREMIER+m 2 Configure. See "Design Player" on page 45.

### **Draw Next Color Block**

Use Draw Next Color Block **>** to step through the color blocks one at a time in the order shown in the worksheet. Only one color is visible at a time. All the other colors are automatically hidden (unchecked). The work area displays only the stitches in the visible color block.

The Draw Range shows the Start and End stitches of the color block and the sliders move as each color is selected.

Alternatively, you can right-click a color block in the worksheet and select Show only this Color from the context menu. See "Color Worksheet" on page 32.

Shortcut

Control Strip: 🔊

### **Draw Previous Color Block**

Use Draw Previous Color Block <a> to step through the color blocks in reverse order. Only one color is visible at a time. All the other colors are automatically hidden (unchecked). The work area displays only the stitches in the visible color block.</a>

The Draw Range shows the Start and End stitches of the color block and the sliders move as each color is selected.

Alternatively, you can right-click a color block in the worksheet and select Show only this Color from the context menu. See "Color Worksheet" on page 32.

Shortcut

Control Strip:

### Invert Visible Color Blocks

Use Invert Visible Color Blocks  $\frac{6}{20}$  to switch the visibility of the color blocks so that those that were visible become hidden, and those that were hidden are displayed.

This is a useful method to quickly turn off all color blocks, and then use Draw Next Color, Draw Previous Color, or choose colors in the color worksheet.

Shortcut

Control Strip: 1/26

### **Previous Stop**

Use Previous Stop 🥨 to step through the Stop 🙆 commands one at a time.

Shortcut

Control Strip: <</p>

### Next Stop

Use Next Stop 🚳 to step through the Stop 🔞 commands in reverse order.

Shortcut

Control Strip: 3

### **Draw All Stitches**

Use Draw All Stitches **m** to display all stitches in the currently active subdesign. This is automatically used when a new embroidery is opened or PREMIER+<sup>™</sup> 2 Modify is started. When stitches have been hidden by changing the color selection or the Draw Range, click the icon to view all stitches again. All the color blocks will become visible and the Draw Range will be reset to all stitches.

Shortcut

Control Strip:

### Effect of Draw Range on Color Blocks

Using Draw Next Color Block or Draw Previous Color Block will set the Start and End slider bars to the beginning and end of the currently visible color block. If you then change the Start or End stitch in the Draw Range, all the color blocks in the color worksheet will be set back to visible, although only the stitches selected with the slider bars will be shown in the work area. Alternatively, if you make another color block visible again after using Draw Next Color Block or Draw Previous Color Block then the Draw Range will be reset to all stitches, but only the stitches in the visible color blocks will be shown in the work area.

If you have set a Draw Range, then only the stitches in the color blocks that are visible within the range will be displayed. If you then display a color block that is outside the Draw Range, the Draw Range will change to include the newly visible color block and all stitches for all visible color blocks in the new Draw Range will be displayed.

## View a Range of Stitches

The draw Start and End slider bars in the Control Strip provide a very powerful way of viewing an embroidery and understanding exactly how it is formed. They allow you to progress forwards and/or backwards through an embroidery stitch by stitch and isolate a specific sequence of stitches. If desired, select the visible stitches as a block to work on (Select All Visible ) or use a feature such as stamping or global morphing without affecting the hidden stitches. If desired, use Ghost Mode mines to show the overall shape of the embroidery while only working on visible stitches. Changing the range of stitches can be combined with selecting colors to display a particular set of stitches that would be difficult to isolate with other functions.

### Draw Range (Slider Bar)

The left handle and left stitch number box set the Draw From Start stitch number. The right handle and right stitch number box set the Draw To End stitch number.

Use the Draw Range to set the Start or End stitch number in any of the following ways, as shown here for Draw From Start:

- 1 Click and drag the handle along the slider bar. The stitch number will change as you move the handle.
- 2 Click the arrows at the end of the number boxes to change the stitch number by one at a time. Click and hold on an arrow to progress more rapidly.
- Click in the space on the slider bar on either side of the handle to move it in that direction and change the stitch number by 50 at a time. You can also click and hold to change the number more rapidly, but the handle will stop when it reaches the arrow pointer, or the other handle.
- 4 Enter a stitch number directly in the stitch number box. A number that is outside the range will be ignored.

1615	ty 13270 €
1618	13270
1551	↓ 13070 ÷
]1551	13070

In all cases, the work area will show the range of stitches as the Start or End number changes.

### Effect of Color Block Selection on Draw Range

Using the Draw Next Color Block or Draw Previous Color Block icons will set the Start and End slider handles to the beginning and end of the currently visible color block. If you next make another color block visible again immediately after using Draw Next/Previous Color Block then the Start and End slider handles will move to the first and last stitches, but only the stitches in the visible color blocks will be shown in the work area. Alternatively, if you next move the Start or End slider handle then all the color blocks in the color worksheet will be set back to visible, although only the stitches selected with the slider handles will be shown in the work area.

When you set a Draw Range, only the stitches in the color blocks that are visible within the range will be displayed. If you then display a color block that is outside the Draw Range, the Draw Range will change to include the newly visible color block and all stitches for all visible color blocks in the new Draw Range will be displayed.

## Stitch Player

Use the Stitch Player to play through the stitches in the selected subdesign as if they were being stitched. The Stitch Player is in the Control Strip.

Use the Design Player 🔀 to view the whole embroidery as it will be stitched.

Use the controls to play forward and rewind through the embroidery at three speeds, jump to the start or end of the stitches and stop at any time. See "Use a Cutwork Line for Dragonfly Wings" on page 143.

If you stop the Stitch Player part way through drawing the design, the rest of the stitches will be hidden. Use Draw All Stitches **may** to show the whole embroidery.

### **Stitch Player Controls**

M	Start	Jump to the first stitch in the embroidery and stop.
	Fast Rewind	Play in reverse at triple speed.
	Medium Rewind	Play in reverse at double speed.
•	Rewind	Play in reverse.
	Stop	Stop play.
	Play	Play at normal speed.
••	Medium Play	Play at double speed.
•••	Fast Play	Play at triple speed.
м	End	Jump to the last stitch in the embroidery and stop.

### Pause for Commands

When Pause for Commands 👸 is enabled, the Stitch Player will pause at every Color Change, Stop or Trim command.

Any messages, for example instructions for appliqué placement, are displayed following their Stop commands.

Shortcut

Control Strip: 💏

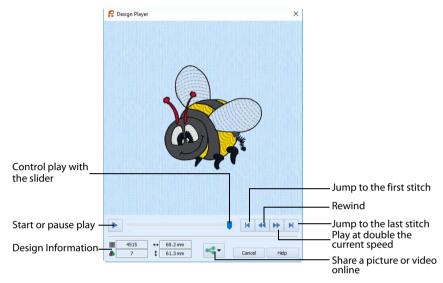

## Design Player

Use Design Player [2] to play through the stitches in the embroidery as if they were being stitched from an exported embroidery. All parts of the embroidery that are within the hoop area are shown, whether or not they are selected.

The current Optimize for Sewing settings from PREMIER+<sup>™</sup> 2 Configure are used.

All the designs in a multipart embroidery are shown in the Design Player. This is therefore a good way to see the whole project after adjusting stitches in one of the designs.

- Any messages, for example instructions for appliqué placement, are displayed following their Stop commands.
- Appliqué fabric is displayed if present, but any background garment, quilt block or fabric is not shown.
- Decorations are shown following their placement stitches.

Embroideries that are outside the hoop are not shown in the Design Player. If an embroidery contains a felting needle, the project will be shown "flipped", as it would actually be stitched.

#### Share

Use Share  $\triangleleft$  to save or share a picture or video of your design on your favorite social media site. Share over Facebook® **f**, Flickr® •••, Twitter® **v** and YouTube® **2**. See "Share Picture" on page 49 and "Share Video" on page 50.

#### Shortcuts

- Quick Access Toolbar; Home Tab: <a>[</a>
- Keys: Ctrl + J; Alt, 0; Alt, H, J

### Using the Design Player

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐. See "Insert" on page 15.
- 3 Browse to Documents\Premier+2\Samples\Modify\Stitch\.
- 4 Scroll down to "Bumblebee 2 New".
- 5 Click to load the embroidery into the work area.
- Click Design Player
- The Design Player dialog opens.
- 7 Use the Play button **>** at the bottom left to start playing through the stitches in the embroidery.

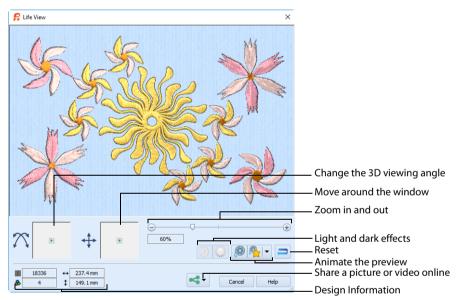

8 Use the controls to play forwards or backwards through the embroidery at different speeds, jump to the start or end of the stitches, and stop at any time.

## Life View

Use Life View **o** to show how an embroidery exported from the project will look in 3D with real-world perspective. Zoom in to see detail, and move and rotate the embroidery in a three-dimensional view. All parts of the embroidery that are within the hoop area are shown, whether or not they are selected.

Use Life View **2** at any time when you want to see the design with no grid, stitches selected, or markers displayed, and when you want to see the effects of glow in the dark and solar reactive threads.

 Any background garment, quilt block or fabric is shown, together with appliqué fabric, if present.

Decorations are shown, but not their placement stitches.

#### Shortcuts

- Quick Access Toolbar; Home Tab:
- Keys: Ctrl + L; Alt, 9; Alt, H, L

#### Position

Use the position 💠 slider to move to another part of the Life View window.

Click and drag the cross marker in the center of the box to view the desired part of the embroidery, using the zoom slider to control the magnification.

#### Rotation

Use the rotation  $\bigwedge$  slider to view the stitching in the embroidery in 3D.

Click and drag the cross marker in the center of the box to change the angle at which the embroidery is viewed, and allow you to visualize the project in varying real-world views.

Alternatively, click and drag directly in the embroidery preview area to change the angle of view. Use the zoom and position sliders to select the part of the embroidery to view.

### Zoom

Use the zoom slider to change the magnification of the embroidery.

Drag the slider bar to the right to magnify the view of the embroidery, and to the left to shrink the view of the embroidery. The box below the zoom bar displays the current magnification.

Click the marker in the center of the zoom bar (100%) to view the embroidery at a magnification as close as possible to the Real Size setting you chose in PREMIER+ $^{m}$  2 Configure.

When zoomed in, use the position slider to move around the embroidery.

#### **Design Information**

Life View shows the dimensions (Width  $\leftrightarrow$  and Height  $\ddagger$ ), the number of stitches  $\equiv$  and the number of colors  $\clubsuit$  in the embroidery.

#### Glow in the Dark

Use Glow in the Dark ) to view the effect of using glow in the dark threads. The preview will darken to simulate the lights dimming, and the glow in the dark threads will be shown in their luminescent colors.

Glow in the Dark ) is only available if glow in the dark thread colors are used in the design.

#### Solar Reactive

Use Solar Reactive 😡 to view the effect of using photochromic threads. The preview simulates the sun shining on the design, and the photochromic threads change shade to show the colors they become in sunlight.

Photochromic threads change color in sunlight.

Solar Reactive 🂭 is only available if photochromic thread colors are used in the design.

PREMIER+<sup>™</sup> 2 Modify Viewing Embroideries & Threads

### Play Demo

Use Play Demo 🙆 to animate the preview and show the embroidery at different angles automatically. Click to start and stop the animation.

### Play My Demo

Use Play My Demo 🥵 to animate the preview using your own demo. Use the menu options to add the current position as a point in the demo, or reset to create a new demo.

The My Demo animation will be used for Life View in all modules. It is stored in the AnimationPath.txt file in the \User\AppData\Local\VSMSoftware\Premier+2\LifeView folder.

Copy this file to another location as a backup before creating additional My Demo animation paths for Life View.

#### Reset

Use Reset 🤁 to set Rotation, Position and Zoom back to the default settings.

### Share

Use Share a picture or video of your design on your favorite social media site. Share over Facebook® 🚹, Flickr® 🐽, Twitter® 🏹 and YouTube® 🗖. See "Share Picture" on page 49 and "Share Video" on page 50.

## Share Picture

Save or share a picture of your design. Share over Facebook<sup>®</sup> 🚹, Flickr<sup>®</sup> 🐽 or Twitter<sup>®</sup> 💟

Select a size for the picture, then save the picture to your computer or share it over Facebook®, Twitter® or Flickr®. A progress bar shows during the upload.

#### Size

Select a size for your picture. Choose from Standard, 2x, 3x, and 4x. Standard size is the size of the picture in Design Player or Life View.

#### Save

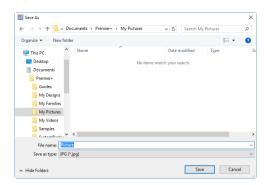

Click Save 🔚 to save the picture to your computer. The Save As dialog appears for you to save the picture, with the default file name being the same as the design. Change the name as desired.

re Demo Point

Reset My Demo

The following file formats may be saved: JPEG Low Quality (.jpg), JPEG High Quality (.jpg), Tagged Image File Format uncompressed (.tif) and Portable Network Graphics (.png).

#### Social Media

Upload the picture to Facebook<sup>®</sup> **f**, Flickr<sup>®</sup> **••**, or Twitter<sup>®</sup> **5**. Log in to the Social Media website to upload your picture. A progress bar shows during the upload.

### Share Video

Save or share a video of your design. Share over Facebook® 🚹, Flickr® 🐽 or YouTube® 🔽.

Name the video and select its size, quality and speed. Then save it to your computer or share it over Facebook<sup>®</sup>, Flickr<sup>®</sup> or YouTube<sup>®</sup>. A progress bar is displayed while the video is created.

The higher the image quality, the slower the speed of upload and download.

The video title and the name of the creator are used on the opening frames of the video. Enter the name of the video, and the name of the creator.

#### Size

The size of the moving image in pixels. The higher numbers create a higher quality video. Choose from 1080p (HD), 720p (HD), 480p and 360p. The initial setting is 480p.

### Quality

The bit rate, or speed of data transfer. Choose between Low, Medium and High. The initial setting is Medium.

### Speed

Set the speed of the Design Player for the video. Choose from Standard, 2x, 4x, 8x, 16x, 32x, 64x, and 128x. The initial speed is 16x.

This option is only available for videos created from Design Player.

#### Video Information

The Total Duration of the video in minutes and seconds, and the estimated file size in MB are displayed. The duration and size vary according to the Size, Quality and Speed of the video.

#### File Name

Select a folder and name for the video file. Click Select to browse to a different folder on your computer.

### Start and Cancel

Click Start to create your video, using the settings that you chose above. A progress bar shows during the creation of the video, with an estimate of the creation time. Click Cancel to stop the video creation.

All other functions in the dialog box are unavailable (grayed out) during video creation.

#### Social Media

Upload the video to Facebook<sup>®</sup> 🚹, Flickr<sup>®</sup> •• or YouTube<sup>®</sup> 🛄. Log in to the Social Media website to upload your video.

## Zoom Commands

A number of functions are available to make it easier to navigate around embroideries. These include the Zoom functions at the bottom right of the screen and the Overview Window. By default, each embroidery is shown at a size so that the hoop fills the window, the same as if you click Zoom To Fit 🔛 after zooming in or out.

You can also navigate around an embroidery by selecting the colors to see and changing the range of stitches that are displayed.

### Zoom To Rectangle

Use Zoom To Rectangle 强 to enlarge the view of an area of the embroidery.

Click the Zoom To Rectangle icon  $\textcircled{I}{2}$  to the right of the status bar, and the mouse pointer changes to the zoom in pointer  $\textcircled{C}{2}$ . Then either click a point on the embroidery you want to zoom in towards, or click and drag a rectangle around the area you want to enlarge and release the mouse button to zoom.

Zoom To Rectangle is automatically deselected after you have used it.

#### Shortcuts

- Status Bar: 🔩
- Keys: Ctrl + 0

If you have a wheel mouse, hold the Ctrl key and move the wheel to zoom.

### Pan Mode

Use the Pan feature to move around the screen easily. The Pan feature works when you are Zoomed In on part of the screen, making the scroll bars visible at the right and bottom of the work area.

Hold the Shift key down until the pan cursor 🖑 appears, then click and drag.

The pan occurs in real time, that is you see the work area move as you drag across the screen.

Alternatively, use the Overview Window to move around the screen when Zoomed In.

### Pan Around the Work Area

- 2 Click and drag to draw a box, then release to zoom in. Scroll bars appear to allow you to move around the screen at this higher zoom level.
- 3 Hold the Shift key down, then start to click and drag. The pan cursor 🖑 appears.
- 4 Click and drag until the pointer is in the desired part of the screen. (If you have a wheel mouse, you can click the wheel to pan around the screen.)
- 5 Lift the pen or release the mouse button.

## Zoom To Fit

Use Zoom To Fit 🚼 to view the whole hoop area. Click the Zoom To Fit icon and the view will zoom in or out to show the hoop area in the window.

Shortcuts

- Status Bar: 🔠
- Keys: Ctrl + 9

### Zoom By Percentage

Use the drop-down list in the Status Bar to set percentage levels to zoom in for the active embroidery. Alternatively, enter a number in the percentage text box, from 10% up to 1600%.

Select 100% to display the embroidery at a magnification as close as possible to the Real Size setting you chose in  $PREMIER+^{M} 2$  Configure.

#### Shortcuts

Keys:	100%:	Ctrl + 1
	200%:	Ctrl + 2
	400%:	Ctrl + 3
	800%:	Ctrl + 4
	75%:	Ctrl + 5
	50%:	Ctrl + 6
	25%:	Ctrl + 7

### Zoom Bar

Use the Zoom Bar to zoom in or out from the center of the currently selected picture or embroidery.

The Zoom Bar is on the right side of the Status Bar.

Use the slider to zoom in or out of the picture or embroidery, or click on the Zoom Out or Zoom In 💮 icons.

#### Shortcuts

Zoom Out	Keys: Ctrl + -
Zoom To Rectangle	Keys: Ctrl + 0
Zoom In	Keys: Ctrl + =
Zoom To Fit	Keys: Ctrl + 9

## **Design Information**

The dimensions (Height <sup>‡</sup> and Width ↔), Stitch Count **≡**, and number of colors <sup>♣</sup> for the active embroidery are shown on the Design Panel.

The Design Panel also shows the order of the color blocks in the color worksheet and any notes that are included in the embroidery. Click on a color block to change thread colors. Also use the color worksheet to show or hide stitches by color block, and move and merge color blocks. Edit or add information to the Notes and Settings as desired.

### Hoop Size

The current Hoop Size is shown on the status bar. Use Change Hoop 🕕 to change the Hoop Size.

### Notes and Settings

Store up to 2000 characters of notes about an embroidery, such as a description, keywords or category of embroidery. This information is shown in the Notes and Settings section of

the Design Panel. Select Notes  $\blacksquare$  or Settings  $\frac{1}{2}$ , then click Edit  $\checkmark$  to open the Notes or Settings dialogs.

Notes from your .vp4, .vp3, .vip, .hus, .pcs and .pes embroideries are automatically placed in the Notes box when the embroideries are loaded in PREMIER+<sup>™</sup> 2 Embroidery. Use the PREMIER+<sup>™</sup> 2 Windows<sup>®</sup> Explorer plugin to search all your .vp4, .vp3 and .vip format embroideries for key words in the Filename or Notes to decide which embroideries to view, open or send to certain connected embroidery machines.

To keep the Notes information, save or export your changed embroideries as file type Husqvarna Viking / Pfaff (.vp4, .vp3 or .vip).

### Notes

Click Notes 📃 to display the Notes, then click Edit 📈 to change the Notes for the embroidery. The Notes dialog will appear.

The Notes dialog allows free text and keywords to be added to the Notes for the selected embroidery. Type additional Notes in the Notes box.

Use Ctrl+Enter to start a new line of text.

Up to 2000 characters can be entered in the Notes.

#### Keywords

Select Keywords for the embroidery from the list, then click Add to add them to the Notes for the embroidery.

### Change the Notes for an Embroidery

- 1 Select the window and the embroidery for which you want to amend the notes.
- 3 Click Edit /.
- 4 In the Notes text box make your desired changes to the Notes. Use Ctrl+Enter to start a new line of text.
- 5 To add Keywords, select the keyword from the category heading or subcategory in the scrolling list. Then click Add.
  Double-click to expand the folders until the desired keyword is highlighted. (Alternatively click on the +

Double-click to expand the folders until the desired keyword is highlighted. (Alternatively click on the + sign.)

6 Click OK to save your amended Notes and added keywords.

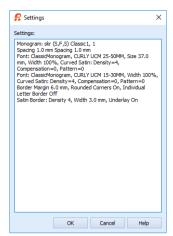

🔗 Notes		×

ОК Са	ncel	Help

### Settings

Click Settings 🐄 to display the Settings, then click Edit 🖌 to change the Settings for the embroidery. The Settings dialog will appear.

Use Ctrl+Enter to start a new line of text.

Up to 2000 characters can be entered in the Settings.

### Change the Settings for an Embroidery

- 1 Select the window and the embroidery for which you want to amend the settings.
- 2 Click Settings 🐄.
- 3 Click Edit 🖍.
- 4 In the Settings text box make your desired changes to the Settings. Use Ctrl+Enter to start a new line of text.
- 5 Click OK to save your amended Settings.

### Get Length

Use Get Length 1? to measure the distance between any two points on an embroidery. Click the Get Length icon 1? and the mouse pointer changes to the Measure pointer  $e_{2}$ . Then click and drag a line across an embroidery. The length of the line is displayed. Rightclick to deselect.

For example, use this to obtain the width of a column of stitches or the length of a movement stitch.

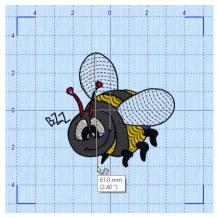

The length is shown in millimeters or inches, according to the setting for Show Measurements in PREMIER+m 2 Configure. The alternative units are shown in parentheses.

Shortcuts

- View Tab: 1?
- Keys: Alt, V, L

### Measure the Height of a Bumblebee Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch, open the Bumblebee 2 New embroidery to load it.
- 4 In the View tab, click the Get Length icon 1?. The mouse pointer changes to the Measure pointer <sup>k</sup>.
- 5 Click and drag to draw a line across the bumblebee embroidery from top to bottom
- 6 Read, and if desired, make a note of the number.

7 Repeat the click and drag to measure any other distances, as required.8 Right-click to deselect the function.

### Coordinates

Use Coordinates **v** to show and hide the Stitch Coordinates dialog box, which shows the coordinates of stitch points. This can also be used to change stitch point positions by editing x and y coordinates.

The Stitch Coordinates dialog box shows the technical details of the Start and End stitches in the current Draw Range. Five stitches are shown at each end of the Draw Range, with the first and last visible stitch indicated by an asterisk. Either absolute (related to the start point of the embroidery) or relative coordinates (related to the previous stitch) may be displayed.

🔒 Stitch Co	ordinates				×
Stitch No.	х	Y	Length (mm)	Command	^
1044	-0.4 mm	-0.4 mm	0.6 mm		
1045	0.8 mm	0.0 mm	0.8 mm		
1046	-0.4 mm	-0.4 mm	0.6 mm		
1047	8.9 mm	-1.7 mm	9.1 mm	Color Robison-Ant	
1048	0 0 mm	0 0 mm	0.0 mm		*
Туре		ursor	Coordin	ates	Apply
Relative		Start	x		Cancel
O Absolute	(	End	Ŷ		Help

While the Stitch Coordinates dialog box is open, you can change the Draw Range as required and the Coordinates dialog box will show the relevant stitches and commands.

The X, Y and Length columns are shown in millimeters or inches, according to the Show Measurements setting in PREMIER+<sup>™</sup> 2 Configure.

This is an advanced function that can be used to help find individual stitches or commands.

Shortcuts

- View Tab: ×.y
- Keys: Alt, V, CR

#### Stitch No.

The number of each stitch. The asterisk indicates the first or last visible stitch, depending on whether Cursor is set to Start or End respectively.

### X and Y

The horizontal and vertical coordinates of the stitches. If Type is set to Relative then this is the distance from the previous stitch. If Type is set to Absolute then this is the distance of each stitch from the center of the hoop.

#### Length

The length of each stitch from the previous point to the current stitch point.

#### Command

This indicates if the stitch or stitch point is a special type of stitch, or if there is a Command associated with the stitch point.

Command	Description
End	The last stitch point in the embroidery.
Color	Color Change Command. The thread range and thread number is also shown.
Stop	Stop Command.
Trim	Trim Command.

### Туре

This indicates whether the X and Y coordinates are Relative to the previous stitch point or Absolute distances from the center of the hoop.

#### Cursor

Click Start or End to see the first or last stitches in the Draw Range. End is selected when the Stitch Coordinates dialog box is displayed.

#### Coordinates

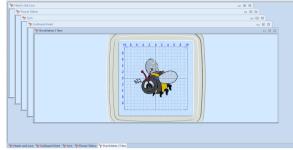

When a stitch in the list is selected by clicking it, the Coordinates boxes show the position (Relative or Absolute) of the stitch point. This does not apply to any item that has an entry in the Command column. If desired, edit the X and Y coordinates and click the Apply button to change the position of the stitch point.

## **Organizing Windows**

Use Cascade 🔄, Tile Windows 🖃 and Switch Windows 🔂 to arrange the embroidery windows on the work area. To restore an embroidery to the whole work area, click the Maximize button 🗉 in the top left of its window, or double-click its title bar.

### Cascade

Use Cascade To arrange multiple windows in the work area in an overlapped fashion. All the title bars of the open windows will be shown in a step-like cascade so that you can see the embroidery name on each title bar. The currently active window is placed last so that it is on top of all the other windows.

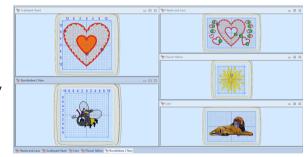

#### Shortcuts

- 🔹 View Tab: 둼
- Keys: Alt, V, CA

### **Tile Windows**

Use Tile Windows to arrange the embroidery windows in the work area. The windows are not overlapped and you can see part or all of each embroidery in each window.

#### Shortcuts

- View Tab:
- Keys: Alt, V, T

### Switch Windows

Use Switch Windows 🗁 to move to another window. You can switch windows when the windows are cascaded, full size, or tiled.

#### Shortcuts

- View Tab: 📑
- Keys: Alt, V, SW, [...]

# Select Stitches and Blocks

Select stitches or a block Select a design Cut, copy, paste or delete a selected block Step through open designs Select a hoop Change color and stitch order Arrange and resize a block View all designs

When viewing stitches, it is often helpful to select 2D. To see the stitch points, select 2D View with Stitch Points <sup>2D</sup>, (View tab) so the stitch points are visible for selecting and moving them. Zoom in close enough to see the separate stitch points.

Color Change (0), Stop (6) and Trim (1) command markers and their associated stitch points can be moved, but they can only be deleted using Delete Commands 🛛 .

The command markers are enlarged when one of the Modify Stitch functions in the Modify tab is selected. See "Modify Stitch" on page 71 and "Showing Commands" on page 75.

## Select Stitches

Use Select Stitches </u> to select and edit single stitches. Click Select Stitches, then click a stitch point and a box appears around the point to show that it is selected.

Click and drag the box to move the stitch point. If desired, use Delete  $\times$  to delete the stitch point.

Shortcuts

Home Tab

- Select, Home Tab; Status Bar: 🔨
- Keys: Alt, H, SS

### Select a Series of Stitches

Click the first required stitch point, then hold down Shift (on the keyboard) and click the last required stitch point. The two stitches you click and all stitches between them will be selected. Click outside the block to make a new selection using this method.

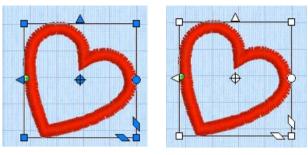

To select several individual stitches, hold down Ctrl and click the desired stitches.

Alternatively, hold down Shift and use the left and right arrow keys to select a series of stitches.

### Select a Block of Stitches

The block Select functions in the Select area of the Home tab and on the Status Bar allow you to select part of an embroidery. A selected part of an embroidery is called a block. A block can be resized/scaled, rotated, mirrored, skewed, moved, nudged, duplicated, copied, cut and deleted.

When a block has been selected, it has a selection box around it on the work area. The selection box has handles which are used to resize, rotate, skew and flip the block. Also, the block is outlined within the selection box, to assist with accurate positioning when it is moved or rotated.

Blue handles for resize

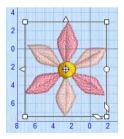

White handles for scale

You may find it easier to select a block when you have selected colors to display and/or changed the ranges of stitches that are visible.

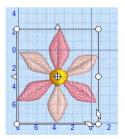

Click and drag inside the block to move it, or use the arrow keys on the keyboard to nudge it in small amounts for accurate positioning. Click and drag the square corner handles to scale the block with constant stitch count (white handles) or resize with constant density (blue handles). Click and drag the round rotate handle to rotate the block freely. Click and drag the center of rotation  $\oplus$  to rotate around a different point. Click the triangular handles to flip the block horizontally or vertically. Click and drag the trapezoidal bottom right corner handles  $\xrightarrow{}$  to skew the block.

A block can also be resized/scaled and rotated precisely using the Modify Block  $\log$  dialog on the Home tab.

The resize handles will be round instead of square if any part of the selection is outside the hoop boundary.

Square handles show that the whole embroidery is inside the hoop

Round handles show that at least part of the embroidery is outside the hoop

### Pasting a Block

When a block is pasted into an embroidery it is automatically selected as the current block, and Box Select is activated. The block is attached to the last visible stitch.

See Paste, Paste as Design and Paste into New Window on page 78.

### Deselecting a Block

Click the work area outside a block to deselect it. The selection box around the block will disappear.

Right-click to turn off the current select function without deselecting the block.

## **Block Select Functions**

## **Box Select**

Use Box Select  $\square$  to select stitches in a rectangular area. Click Box Select and the pointer changes to the box select pointer  $\[mathbb{k}_{\square}$ . Click and drag around the area you want to select. When you release the mouse button, the block will show you the extent of the selection. Click outside the block to make a new selection using this method. Right-click to deselect.

Use Add to Selection 🚑 with any select function to increase the area of selected stitches, or use Remove from Selection 🔄 to make the currently selected area smaller. Box Select is also activated automatically when a block is pasted into an embroidery.

If the wrong area is selected, click in the active window, but outside the box, to deselect.

#### Shortcuts

- Select, Home Tab; Status Bar: \_\_\_\_
- Keys: Alt, H, B

### Select a Heart with Box Select

- 1 Click the Hoop icon 🔵 and set the hoop size to 240mm x 150mm Universal Large Hoop 2, Rotated orientation. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 Browse to the folder Documents\Premier+2\Samples\Modify\Stitch.
- 5 Scroll down and load the 'Hearts and Lace' embroidery.
- 6 Zoom in ⊕ to the area to the right with the small hearts.
- 7 Click Box Select  $\square$ . The pointer changes to the box select pointer  $k_{\square}$ .
- 8 Click and drag around one of the small hearts to the right, then release the mouse button. The heart is now surrounded by a selection box.
- 9 Click outside the block to make a new selection using this method.
- 10 Right-click to deselect.

## **Color Block Select**

Use Color Block Select 🙀 to select a block of stitches by thread color. Click the icon, then click a visible color on the embroidery. The block will be selected according to the visible stitches of the color you clicked. Click outside the block to make a new selection using this method. Right-click to deselect.

Multiple color blocks using the same thread color are not selected. If you require this then either change the color order and merge the required color blocks (see "Move and Merge

Colors in the Worksheet" on page 36), or perform a ColorSort which will combine identical thread colors into single color blocks where possible (see "ColorSort" on page 37).

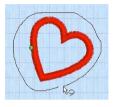

If the wrong area is selected, click in the active window, but outside the box, to deselect.

#### Shortcuts

- Select, Home Tab; Status Bar: 💸
- Keys: Alt, H, CB

## **Freehand Select**

Use Freehand Select  $\bigotimes$  to select a block of stitches within an area of any shape. Click Freehand Select and the pointer changes to the freehand select pointer  $\&_{\oslash}$ , then click and drag to draw an irregular outline around the desired area. When you release the mouse the area is closed automatically with a straight line between the last mouse position and the start position.

Use Add to Selection 🚑 with any select function to increase the area of

selected stitches, or use Remove from Selection 🔄 to make the currently selected area smaller. Freehand Select is useful when an area cannot be easily selected by using the simpler Box Select function. It is particularly useful to highlight part of a color area which could not otherwise be easily selected.

If the wrong area is selected, click in the active window, but outside the box, to deselect.

### Select a Heart with Freehand Select

- 1 Click the Hoop icon 🔵 and set the hoop size to 240mm x 150mm Universal Large Hoop 2, Rotated orientation. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>3</u>.
- 4 Browse to the folder Documents\Premier+2\Samples\Modify\Stitch.
- 5 Scroll down and load the 'Hearts and Lace' embroidery.
- 6 Zoom in 🔂 to the area to the right with the small hearts.
- 7 Click Freehand Select 🏹. The pointer changes to the Freehand select pointer 🎭.
- 8 Click and drag to draw an irregular outline most of the way around one of the small hearts to the right, then release the mouse button. When you release the mouse the area is closed automatically with a straight line between the last mouse position and the start position, and the heart is surrounded by a selection box.
- 9 Click outside the block to make a new selection using this method.
- 10 Right-click to deselect.

#### Shortcuts

- Select, Home Tab; Status Bar: 🎲
- Keys: Alt, H, FS

## Freehand Point Select

Use Freehand Point Select  $\bigcirc$  to select a block of stitches within an area of any shape, defined by a series of points. Click Freehand Point Select and the pointer changes to the Freehand point select pointer  $\aleph_{\odot}$ . Click a series of points to create an irregular outline of straight or curved lines around the desired area, using Ctrl+click to place a square (straight line) point. Click and drag  $\aleph_{\boxtimes}$  to reposition an existing point. Click Delete to remove the last–placed point.

Right-click when the area is complete. The selection box will show you the extent of the block. Freehand Point Select may be easier to use than Freehand Select for precise selections. Click to deselect.

Use Add to Selection 🚑 with any select function to increase the area of selected stitches, or use Remove from Selection 🔄 to make the currently selected area smaller. If the wrong area is selected, click in the active window, but outside the box, to deselect.

#### Shortcuts

- Select, Home Tab; Status Bar: 💭
- Keys: Alt, H, FP

### Select a Heart with Freehand Point Select

- 1 Click the Hoop icon 🖸 and set the hoop size to 240mm x 150mm Universal Large Hoop 2, Rotated orientation. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 Browse to the folder Documents\Premier+2\Samples\Modify\Stitch.
- 5 Scroll down and load the 'Hearts and Lace' embroidery.
- 6 Zoom in 🔂 to the area to the right with the small hearts.
- 7 Click Freehand Point Select , The pointer changes to the Freehand Point pointer bo.
- 8 Click to place the first point for the selection. A yellow square node appears.
- 9 Click to place a series of points around the desired area. As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself.

The line may 'swing' while you place points. Just carry on, you can adjust it afterwards.

- 10 Use Ctrl+click to place square nodes for straight lines.
- 11 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer  $k_{\mathbb{R}}$ . Adjust the node as desired.

When the Move Node pointer is active you can adjust existing nodes.

If you click while the Freehand Point pointer  $k_{0}$  is active, another point will be added to the line.

- 12 When your line is as desired, right-click to surround the area with a selection box.
- 13 Right-click to deselect Freehand Point Select.

## Select All Visible

Select All Visible 🔡 is a one-click function that selects all visible stitches in the current embroidery. Click outside the block to deselect.

Use the color worksheet and the Draw Range to select which stitches are visible in the current embroidery. This is useful to isolate an area of stitches, especially if it includes more than one color, or you only wish to apply a function to part of an area.

#### Shortcuts

- Select, Home Tab; Status Bar: #
- Keys: Ctrl + A; Alt, H, SA, SA

## Select None

Use Select None 🔡 to deselect all embroideries and blocks in the work area, including any outside the hoop.

#### Shortcuts

- Select, Home Tab; Status Bar: 
   Bar
- Keys: Ctrl + Shift + A; Alt, H, SA, SN

## **Replace Selection**

Use Replace Selection 🔤 to replace the currently selected stitches with the new selection.

### **Replace a Selection**

- 1 Place an embroidery on the work area.
- 2 Use Box Select () (or another selection tool) to select some stitches.
- 3 Ensure that Replace Selection is selected.
- 4 Click Box Select and select some different stitches. The new selection replaces your old selection.

#### Shortcuts

- Select, Home Tab:
- Keys: Alt, H, RS

## Add To Selection

Use Add to Selection 🔠 with any select function to add the new selection to the currently selected stitches.

### Add to a Selection

- 1 Place an embroidery on the work area.
- 2 Use Box Select (or another selection tool) to select some stitches.
- 3 Click Add to Selection 4.
- 4 Click Box Select and select some different stitches. The new selection is added to your old selection.

#### Shortcuts

- Select, Home Tab: 🚑
- Keys: Alt, H, A

## **Remove From Selection**

Use Remove from Selection 📳 with any select function to remove the new selection from the currently selected stitches.

### Remove from a Selection

- 1 Place an embroidery on the work area.
- 2 Use Box Select 🛄 (or another selection tool) to select some stitches.
- 3 Click Remove From Selection <a>[-]</a>.
- 4 Click Box Select and select some of the stitches within your selection. The new selection is removed from your original selection.

Shortcuts

- Select, Home Tab: 🔄
- Keys: Alt, H, RF

## **Move Block**

Move a block using click and drag. Click inside the block and drag it to the required position. Any stitches which lead to or from the block will be stretched to accommodate the new position of the stitches moved in the block.

When you drag the selection, an outline within the selection box shows the shape of the block. If you accidentally move the center of rotation  $\oplus$ , simply click and drag inside the selection box again. For more information on the Center of Rotation, see "Free Rotation" on page 66.

### Nudge

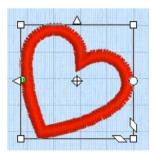

A block of stitches can be moved in small amounts to nudge it accurately into the desired position. Use the arrow keys on the keyboard to nudge a block.

## **Resize Block and Scale Block**

Use Resize  $\frac{1}{10}$  to switch between resize and scale. Use resize to change the size of the block and retain constant density. Use scale to change the size of the block and retain constant stitch count. The handles on the block selection show when resize or scale is selected.

Blue handles for resize

White handles for scale

Click and drag one of the square corner handles to resize or scale. Hold down Ctrl as you click and drag to resize or scale proportionally. Hold down Shift to resize or scale from the center.

Alternatively, click Modify Block IC and enter the desired percentage values in the Height % and Width % boxes in the Modify Block dialog box, then click Apply. Click in the Height % or Width % box and enter a percentage directly, or click the small up and down arrow buttons next to each box to change the percentage by 1 point at a time. After changing the percentage, you can see what the actual height and width will be in millimeters.

Resize should be a single step operation. If necessary, use Undo and try again if the desired effect is not achieved at the first attempt. Repeated use of Resize on the same area of stitches will lower the quality of stitching.

If desired, use Resize 📄 (File menu) to adjust the resize settings. This may be useful when making large changes to the size of a block. The Stitch Optimizer is also used automatically after each resize, as selected by default in Resize.

Shortcuts

- Home Tab: <sup>1</sup>/<sub>1</sub>
- Keys: Alt, H, Re

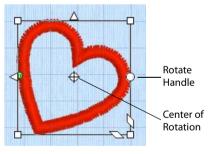

## **Rotate Block**

Rotate the selected block of stitches to any degree using free rotation with the mouse, entering a specific angle or rotating in 45 degree steps.

### Free Rotation

Click and drag the rotation handle to rotate the block freely to any angle. If desired, move the center of rotation  $\oplus$  before rotating the block.

The selection box around the block and the block outline are rotated around the center of rotation. When you release the mouse button, the block will be redrawn in its new position.

### Move the Center of Rotation

The center of rotation  $\oplus$  is initially shown in

the middle of the block. Click on or within the center of rotation, then drag it to any position in the embroidery. This changes the pivot point around which the block rotates for any of the rotation methods.

When the block is moved, scaled or resized, the center of rotation is returned to the center of the block.

### Rotate 45

Use Rotate 45  $\mathbf{v}$  to rotate the block or selected area of stitches in 45 degree steps. If desired, move the center of rotation  $\oplus$  before rotating the block.

Shortcuts

- Tools, Home Tab:
- Keys: Alt, H, R4

# **Modify Block**

Use Modify Block IC to open the Modify Block dialog, where you can show and change the size, rotation and skew of the currently selected block.

### Shortcuts

- Tools, Home Tab: 10
- Keys: Alt, H, MB

# **Modify Block**

Use the Modify Block i dialog box to show and change the size and rotation of the currently selected block, and to skew the selected block.

Modify the currently selected block as desired, then click Apply to show your changes in the work area.

Click Undo 💋 to reverse your changes.

### Size

#### Height and Width %

Show and change the height  $\ddagger \%$  and width  $\Rightarrow$  percentage of the currently selected block. The height and width are scaled or resized according to the Resize mode.

The size in millimeters to which the block will be changed is shown to the right.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

### Rotate

#### Angle

In the Angle 👌 box enter an angle, from 0 to 359 degrees, then click the Apply button. The preview shows the selected angle.

If desired, move the center of rotation  $\oplus$  before rotating.

### Skew %

Skew the currently selected block horizontally and vertically. Enter values in the horizontal and vertical precentage boxes, then click Apply. The block is scaled or resized according to the Resize mode.

🔒 Modify Block	×
Size	
Rotate	
Skew C % 0 ¢ 3 % 0 ¢ Apply Close Help	

For Horizontal Skew  $\square *$ , positive numbers will skew the lower part of the block to the left and negative numbers will skew it to the right. For Vertical Skew  $\square *$ , positive numbers will skew the right part of the block upwards, and negative numbers will skew it downwards.

# Resize a Dragonfly Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch, scroll down to the thumbnail of Perky Dragonfly.
- Click to load the embroidery.
   A larger size would be more suitable when creating cutwork, for example.
- 6 Click and drag to draw a rectangle around the dragonfly.
- 7 Release the mouse button and the dragonfly is surrounded by a selection box with white handles.
- 8 Click Resize **1**. The handles on the selection box become blue. The blue handles indicate that when the size of the embroidery is changed it will be resized. The stitches are recalculated to maintain the original density.
- 9 Note the number of stitches in the embroidery. You can see this in the Information area on the Design Panel, or in the Control Strip.
- **10** Click Modify Block free. The Modify Block dialog box appears.
- 11 In the Size section, ensure Proportional is checked, then change Height percentage <sup>1%</sup> to 125%. The Width percentage will increase by the same amount.
- Click Apply. The dragonfly increases in size, and the number of stitches is increased from 4337 to approximately 4387.
- 13 Close the Modify Block dialog box.
- 14 Left-click outside the select box to deselect the stitches.

# Flip or Skew Block

Mirror a block of stitches vertically or horizontally using the flip handles on the block selection box.

If long stitches go across the block after it is mirrored, use Reverse Order to prevent this. Alternatively, reselect the block and try again.

# Horizontally Flip Block

Click the Flip Horizontal handle to mirror a block horizontally.

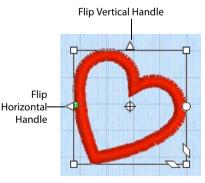

# Vertically Flip Block

Click the Flip Vertical handle to mirror a block vertically.

# Skew a Block

Skew a block vertically or horizontally using the trapezoidal Skew handles — in the bottom right corner of the block selection box.

🔗 Modify Block X

Apply Close Help

Skew will change the density of stitching. It is recommended to use Stitch Optimizer  $\phi$  in the Modify tab afterwards.

# Center in Hoop

# Center in Hoop

Use Center in Hoop  $\bigcirc$  (Home tab) to move the embroidery to the center of the hoop and, if necessary, add a hoop movement so that the embroidery starts from the center of the hoop.

When an embroidery is not centered, it may be difficult to repeatedly stitch out the embroidery so that the stitchouts line up. This may happen with certain embroideries that have a start point at the side. Use Center in Hoop to correct this.

#### Shortcuts

- Tools, Home Tab:
- Keys: Alt, H, CI

# **Reverse Order**

Reverse Order  $\rightleftharpoons$  is used to reverse the stitch order of a selected block. For example, if a block of stitches making a shape from left to right is selected and mirrored horizontally, using Reverse Order will prevent long movement stitches going across the shape after it has been mirrored.

When Reverse Order is used, only continuous sets of stitches have their order reversed. This ensures that the order of color blocks is preserved, as well as the sequence of stops and trims.

Stitches are a continuous set if they are immediately in sequence one after the other, with no commands (color changes, stops and trims).

#### Shortcuts

- Tools, Home Tab:
- Keys: Alt, H, RO

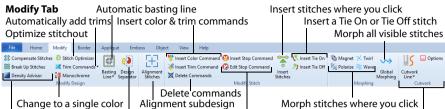

### Reverse the Stitch Order of a Leaf

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'FlowersDreamJacketOriginal' embroidery.
- 4 In the Control Strip, click Draw Next Color Block 
  Solution Only the leaves are now visible.
- 5 In the Home tab, click Box Select  $\square$ . The pointer changes to the box select pointer  $k_{\square}$ .
- 6 Click and drag around the leaf at the bottom left, then release the mouse button. The leaf is now surrounded by a selection box.
- 7 Zoom in on the selected leaf.
- 8 In the View tab, click 2D View with Stitch Points 2D to view the structure of the embroidery. There is a diagonal underlay beneath the straight fill stitches.
- 9 Click 3D View 30.
- 10 In the Home tab, click Reverse Order **‡**. The stitch order has been reversed, and the underlay stitching is now on top.

You could use a contrasting color for the exposed underlay thread to create a multicolored effect.

#### 11 Close without saving.

# Modifying Stitches and Blocks

Adjust stitches Break the design in two Insert & Edit Stop Commands Create cutwork needle lines

# **Modify Stitch**

When using the Modify Stitch functions, after selecting the function click on the stitch that you want to modify.

When any of the Modify Stitch functions in the Modify tab except Edit Stop Command are selected, the command markers are enlarged to make them easier to identify. (When Edit Stop Command is selected only the Stop markers are enlarged.)

To find a marker, click one of the Modify Stitch functions so that the markers are shown at a larger size, then right-click to cancel the function.

## Insert Color Command

Use Insert Color Command 🌺 to add a new color change at the point where you click.

Click the icon and the pointer changes to the insert color pointer  $\searrow$ . Then click on the stitch where you want the color change. The Color Selection dialog box is displayed for you to select the thread color for the new color change.

After you have selected a thread color, the new Color Change command () is shown by a blue circle with a C.

The Color Change command marker will become smaller when Insert Color Command is deselected. The stitches in the embroidery are displayed in the new color after the new color change and up to the next color change. When you select the Design Panel you will see the new color block in sequence in the color worksheet according to where you inserted the Color Change command.

To cancel the function, right-click on the work area, or click Cancel in the Color Selection box.

#### Shortcuts

- Modify Stitch, Modify Tab: No
- Keys: Alt, M, IC

### Change Alternate Petal Colors in a Flower

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Pink' embroidery.

- 4 Ensure that the Design Panel is available.
- 5 Double-click the first color in the worksheet and the Color Selection box appears.
- Click Show All Thread Ranges, then click the drop-down arrow on the Thread 6 Range box and scroll up to select Robison-Anton Rayon Twist 35.
- 7 Browse for thread number 79020 (Baby Pink) in the list and select it. Alternatively, enter 79020 in the Find Thread box.
- Click OK to close the Color Selection box, and the thread color of the petals will 8 change.
- Change the second color in the worksheet to Robison-Anton Metallic J 40, thread 9 number 1001 (Gov't. Gold), then click OK. The center color changes.
- 10 Click Draw Next Color Block 
  to show only the first color in the worksheet.
- Click Zoom To Rectangle 🗔 . The mouse pointer will change to the zoom 11 pointer 🔍.
- 12 Click and drag to draw a rectangle inside the flower, a little way inside the tips of the petals, then release the mouse button to zoom in.
- 13 In the View tab, click 2D View with Stitch Points, so that the flower is shown in 2D, and you can see the black dots that represent the stitch points in the embroidery.

It may be easier to visualize the design if you enable Ghost Mode 🗾.

14 Move the Draw From Start slider bar so that the first petal is hidden, leaving only the Trim command 🕦 at the end. There should be a stitch point at the center of the Trim command marker. The start stitch is shown as 280.

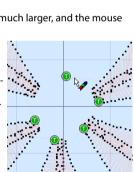

Stitch numbers are given as guides only. It is more important to ensure that the correct stitches are hidden or left showing than to follow the exact stitch numbers.

To get to the desired stitch number quickly, drag the slider to a nearby stitch number, then click the arrows in the stitch number boxes to adjust the number in single steps. Alternatively, type in the stitch number in the box below the slider bar.

- Click the Modify tab. 15
- Click Insert Color Command 🏆 . The Trim command markers become much larger, and the mouse 16 pointer changes to the insert color command pointer  $\Im_{\mathcal{A}}$ .
- 17 Click on the pale pink line showing the stitch to the right of the Trim command at the end of the hidden petal. The Color Selection box will appear.
- Choose Show All Thread Ranges, then set the Thread Range to Robison 18 Anton Ravon Swirl 35.
- Select thread number 017 (Soap Stone), then click OK to close the Color 19 Selection box. The thread color of the visible petals will change. The Trim command is replaced, as it is not necessary to have a Trim and Color Change adjacent to each other.
- Move the left Draw Range slider bar so that the start stitch is shown as 20 537. This will hide the next petal, leaving only the Trim Command and its stitch point at the end.
- Ensure that Insert Color Command 🌺 is still selected, and click on the stitch below the Trim 21 Command at the end of the hidden petal.
- 22 In the Color Selection box select thread number 79020 (Baby Pink) from Robison-Anton Rayon Twist 35 and click OK. The thread color of the visible petals will change.
- 23 Move the left Draw Range slider bar so that the start stitch is shown as 794.
- Ensure that Insert Color Command 🌺 is still selected, and click on the stitch below the Trim 24 Command at the end of the hidden petal.
- 25 In the Color Selection box select thread number 017 (Soap Stone) from Robison-Anton Rayon Swirl 35 and click OK.
- Look at the Design Panel. Notice that the new color blocks are shown in the color worksheet and Control Strip as they are added, alternating between the Swirl and Twist colors.

Insert Stop Command

Use Insert Stop Command 🔇 to add a command which instructs the embroidery machine to stop at the point where you click, displaying a message. A Stop command () is shown by a red circle containing the letter S.

Use stop commands to transform an existing satin stitched 'outline' embroidery into an appliqué. Insert the stop commands so the appliqué fabric may be placed on the hoop, tacked down and trimmed. Stop commands may also be useful where a movement stitch might become trapped under the stitches that follow it.

To view Stop commands with their messages, use Draw Next Stop and Draw Previous Stop on the Control Strip, the Stitch Player or the Design Player. Alternatively, view Stop Commands and their messages in the printed worksheet.

### Insert a Stop Command

- 1 Open an embroidery, then click the Modify tab.
- 2 Click Insert Stop Command S and the pointer changes to the insert stop pointer b<sub>S</sub>.
- 3 Click on a stitch. The Stop dialog box opens.
- 4 Use the Quick Text drop-down menu to insert a stitchout hint, or enter a message. See "Stop Properties" on page 74.
- 5 Click OK to place the Stop Command. A large Stop command marker (i) shows the place where the command was inserted. The Stop command marker will become employ when insert Stop Command

The Stop command marker will become smaller when Insert Stop Command is deselected.

6 To cancel the function, right-click on the work area.

#### Shortcuts

- Modify Stitch, Modify Tab: 🔇
- Keys: Alt, M, IS

- 28 Ensure that Insert Color Command 🌄 is still selected, and click on the stitch to the left of the Trim Command at the end of the hidden petal.
- 29 In the Color Selection box select thread number 79020 (Baby Pink) from Robison-Anton Rayon Twist 35 and click OK.
- 30 Move the left Draw Range slider bar so that the start stitch is shown as 1330.
- 31 Ensure that Insert Color Command \* is still selected, and click on the stitch above the Trim Command at the end of the hidden petal.
- **32** In the Color Selection box select thread number 017 (Soap Stone) from Robison-Anton Rayon Swirl 35 and click OK.
- **33** Right-click to deselect Insert Color Command.
- 34 Click Draw All Stitches in the Control Strip.
- 35 In the View tab, click 3D View 30 and then click Zoom to Fit 1.
- **36** Look at the Design Panel. Notice the number of colors in the design Information is seven.
- 37 Click the Home tab, and in the Tools area click ColorSort are sorted, and then the design information and slider bar shows how the number of color changes has been reduced. Notice on the color worksheet that there are now only three colors in the embroidery.
- 38 Click File, Save As and the Save As dialog box will appear.
- 39 In the Save As Type box, ensure .vp4 is selected. Browse to the folder Documents\Premier+2\My Designs and in the File Name box change the name to 'Flower Pink Twist'. Then click Save.

# Edit Stop Command

Use Edit Stop Command 🐼 to add or change the message or stitchout hint for any existing Stop Command. (Alternatively, use Draw Next Stop and Draw Previous Stop in the Control Strip to locate the desired Stop command.)

## Edit a Stop Command

- 1 Open an embroidery containing a Stop Command.
- 2 In the Modify tab, click Edit Stop Command 🚱.

All visible Stop Commands are highlighted as a red circle containing the letter S 🔞.

- Click on a Stop marker. The Stop dialog box opens. See "Stop Properties" on page 74.
- 4 Edit the message for the Stop command, or select another stitchout hint from the drop-down menu.
- 5 Click OK to close the Stop dialog box, and save the new message.

#### Shortcuts

- 🛛 🛛 Modify Stitch, Modify Tab: 🐼
- Keys: Alt, M, E

# **Stop Properties**

Add a stitchout hint to a Stop Command in the Stop dialog box.

Select a Quick Text comment from the drop-down menu, or enter text in the Comment text field. Click OK to save the text. Up to 200 characters may be entered.

- Cut the hole in your fabric
- Place the puffy foam on the fabric now
- Remove any excess puffy foam
- Check alignment now

# Insert Trim Command

Use Insert Trim Command 춣 to add a command which instructs some embroidery machines to cut the thread. A Trim command 💿 is shown by a green circle containing the letter T.

When adding trims to an embroidery, first use Automatically Add Trim Commands 😹, then add any additional trims with Insert Trim Command. See "Automatically Add Trim Commands" on page 156. To add trims automatically to an embroidery with no trims when it is opened, set "Add trims automatically when opening a file" in the General section of Preferences. See "General" on page 258.

Click Insert Trim Command and the pointer changes to the insert trim pointer  $\frac{1}{2}$ . Then click on a stitch. When a trim is inserted, the stitch disappears.

The Trim command marker becomes smaller 
when Insert Trim Command is deselected.
This is useful when converting embroideries made for non-trimming machines for use on
machines that support Trim commands. Trim commands can be added between areas of
the same color. For instance, insert Trim commands to trim out the joining stitches
between lettering when the thread color contrasts with the fabric.

To cancel the function, right-click on the work area.

#### Shortcuts

- Modify Stitch, Modify Tab: 😽
- Keys: Alt, M, IT

## **Delete Commands**

Use Delete Commands 🛛 to delete an unwanted Color Change, Stop or Trim command.

Select Delete Commands 🛛 , then click on a command marker to delete it.

To cancel the function, right-click on the work area.

To remove all of the trims in an embroidery, use Remove All Trim Commands 😹. See "Remove All Trim Commands" on page 157.

#### Shortcuts

- Modify Stitch, Modify Tab: X
- Keys: Alt, M, DC

### Showing Commands

Use Commands so to show or hide the command markers for Color Change , Stop , Appliqué and Trim . See "Commands" on page 29.

Commands are also shown when one of the Modify Stitch functions is selected, even if Commands is not enabled.

When the command markers are not visible, the commands will still be present in a selection or stitch count.

If Delete Commands 🛛 is used, all commands will be visible while it is selected.

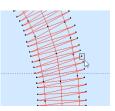

# Edit and Add Stitches

## **Editing Stitches**

When editing stitches, it may be helpful to select 2D View with Stitch Points 22 and zoom in close enough to see the separate stitch points.

To select a stitch, click Single Stitch  $\leq$ , then click a stitch point. A box appears around the point to show that it is selected.

Click and drag the box to move the stitch point. If desired, use Delete  $\times$  to delete the stitch point. Color Change (2), Stop (3) and Trim (3) command markers and their associated stitch points can be moved, but they can only be deleted using Delete Commands X.

## **Insert Stitches**

Use Insert Stitches  $\gtrsim$  to add new stitches to an embroidery. Click Insert Stitches and the pointer changes to the Insert Stitches pointer  $\searrow$ . The stitches will be added using the thread color where you insert the stitches. If you need to use a different color for the stitches, insert color changes before and after the new stitches have been added. Right-click twice to deselect.

Click Insert Stitches 🛣, then click the stitch where you want to add stitches. The next click will place a new stitch point after the stitch you started from. Each following click will place a new stitch point after the previous one. Click Delete to delete the last point placed. Right-click to finish adding stitches.

You may not start from a stitch point where there is a command (Color Change, Stop or Trim). Use Insert Stitches for many reasons. For example, you may add more underlay to an embroidery or make a new section of an embroidery. You can even change an embroidery into an appliqué embroidery by adding placement stitches and Stops to secure the appliqué fabric.

Shortcuts

- Modify Stitch, Modify Tab:
- Keys: Alt, M, IN

# **Inserting Tie Stitches**

Create a tie stitch automatically, to hold down the stitching at the point you click. Typically, tie stitches are used at the beginning and end of areas of satin or fill.

You can add tie stitches to an embroidery where sections are coming loose after stitching out.

# Insert Tie On

Use Insert Tie On <u>K</u> to add a tie stitch at the beginning of the stitch area to be secured. The stitches making up the tie stitch are inserted in the embroidery before the first stitch point of the selected stitch.

Shortcuts

- Modify Stitch, Modify Tab:
- Keys: Alt, M, IO

## Insert Tie Off

Use Insert Tie Off *m* to add a tie stitch at the end of the stitch area to be secured. The stitches making up the tie stitch are inserted in the embroidery after the last stitch point of the selected stitch.

#### Shortcuts

- Modify Stitch, Modify Tab: *>*
- Keys: Alt, M, IE

## Add Tie Stitches to Secure a Fill Area

- 1 Open an embroidery with a fill area.
- In the Modify tab, click Insert Tie On <u></u>
- 3 Find the beginning of the fill area to be secured.
- 4 Click the stitch where you wish to insert the tie stitch. A tie stitch is placed to secure the beginning of the fill area.
- 5 In the Modify tab, click Insert Tie Off **?**. There is no need to deselect the previous tool if another Modify tool is selected.
- 6 Find the end of the fill area to be secured.
- 7 Click the stitch where you wish to insert the tie stitch. A tie stitch is placed to secure the end of the fill area.

Right-click to deselect Insert Tie Off.
 To delete a tie stitch, delete the stitch points making up the tie stitch.

# Cut, Copy and Paste

# **Clipboard Block**

The Clipboard Block shows the current block that can be pasted into your embroideries. It shows the most recent block of stitches or embroidery that has been cut or copied from PREMIER+<sup>™</sup> 2 Modify or another PREMIER+<sup>™</sup> 2 Embroidery System module. It can be used as many times as desired, until a new block is cut or copied.

Click in the clipboard to remove the current Clipboard Block.

## Cut

Use Cut 💥 to remove the whole embroidery or the currently selected block of stitches from the embroidery and make it the Clipboard Block.

Use one of the block selection methods (Box Select, Color Block Select, Freehand Select, Freehand Point Select or Select All Visible) to select the desired block to be cut. It can then be pasted into the same or another embroidery, or pasted into another PREMIER+<sup>™</sup> 2 Embroidery System module.

#### Shortcuts

- Clipboard, Home Tab: X
- Keys: Ctrl + X; Alt, H, CU

## Сору

Use Copy 
to make a copy of the whole embroidery or the currently selected block of stitches. The copy becomes the Clipboard Block, where it can be pasted into any open embroidery as many times as required, or pasted into another PREMIER+<sup>™</sup> 2 Embroidery System module.

#### Shortcuts

- Clipboard, Home Tab:
- Keys: Ctrl + C; Alt, H, CO, CO

# Copy All

Use Edit, Copy All to make a copy of all visible stitches in all designs. The copy is placed on the Clipboard. It can then be pasted into any open embroidery window as many times as required, including into another PREMIER+<sup>™</sup> 2 Embroidery System module.

#### Shortcuts

Keys: Ctrl + Shift + C; Alt, H, CO, CA

### Paste

Use Paste 💼 to insert the Clipboard Block into the embroidery by attaching it to the last currently visible stitch. The Clipboard Block shows the current stitches that will be pasted.

The copied block will be inserted at the same position in the hoop as the original block. To insert a block at any stitch, use any of the controls on the control strip that change the End stitch in the Draw Range. Alternatively, use Paste into New Window.

A pasted block is automatically selected with Box Select so that it is ready to be moved and manipulated as required.

#### Shortcuts

- Clipboard, Home Tab:
- Keys: Ctrl + V; Alt, H, PA, PA

## Paste into New Window

Use Paste into New Window to paste the embroidery in the Clipboard into a new window.

The copied block will be inserted at the same position in the hoop as the original block.

#### Shortcuts

Keys: Ctrl + Shift + N; Alt, H, PA, PI

## Paste as Design

Use Paste as Design to paste the embroidery in the Clipboard into the current window as a new subdesign within the multipart design.

The copied block will be inserted at the same position in the hoop as the original block.

Shortcuts

Keys: Ctrl + Shift + V; Alt, H, PA, PD

# Duplicate

Use Duplicate [] to make a copy of the whole embroidery or the currently selected block, which is automatically pasted on the work area below and to the right of the original and after the selected block in the stitch sequence. The copied stitches are shown in the Clipboard Block on the control panel.

Shortcuts

Clipboard, Home Tab: ]

# Delete

Use Delete 🗙 to delete all visible stitches, or a block of stitches after it has been selected using one of the block selection methods (Box Select 🛄, Color Block Select 🔅, Freehand Select 💭, Freehand Point Select 💭 or Select All Visible 🔡).

When all visible stitches are deleted because no block is selected, all remaining stitches are shown.

This function differs from Cut because it does not place the stitches on the Clipboard. Therefore stitches that have been Deleted cannot be pasted into another embroidery (although Undo can be used if the wrong stitches are deleted).

# **Delete Single Stitches**

When you have a single stitch selected, Delete 🗙 will remove the stitch point.

# **Delete Points**

When using one of the Freehand Point or Tablet features such as Freehand Point Select *C*, Freehand Point Border *S* or Freehand Tablet Border *R*, Cutwork lines, and so on, Delete *X* will remove the last-placed point.

#### Shortcuts

- Clipboard, Home Tab: X
- Keys: Del; Alt, H, DE

# Undo and Redo

# Undo

Use Undo 💋 to reverse the last action. If you are not satisfied with the result, click Redo 🔁. The Undo steps are recorded separately for each open embroidery.

When you use Undo on the Object tab, the previously selected area(s) will be deselected. Each time you use Undo the undone action becomes a Redo.

For instance, you might move a stitch point and then Undo the move. You could now Redo the move or do something else. If you delete the stitch point instead of using Redo then the Redo is lost, along with any other Redos that may have followed.

There are unlimited Undo steps for each open embroidery. Undo steps are only lost when you close an embroidery.

Shortcuts

- Quick Access Toolbar:
- Keys: Ctrl + Z; Alt, 7

# Redo

Use Redo 🔁 to reverse the last action that was undone by Undo. If you are not satisfied with the result, click Undo 💋.

Redo only works if nothing has happened after the last Undo. For instance, if you insert a Color Change command, then Undo and insert a Trim Command then it is not possible to Redo the Color Change because something different has happened instead.

When you use Redo on the Object tab, the selected block is deselected. There are unlimited Undo and Redo steps for each open embroidery.

#### Shortcuts

- Quick Access Toolbar: 💊
- Keys: Ctrl + Y; Alt, 8

# **Borders and Appliqué**

# Create Borders and Appliqué Areas

#### **Border Tab**

Select a shape for drawing

Choose the border line settings

Create an internal, external or overlay border Choose a border stitch type

Use the Border tab to make a new embroidery by adding a satin, running, triple or motif border, optionally with placement stitches and fabric for appliqué. Use a preset shape for the border, draw your own freehand shape, or create a border automatically around an embroidery or selected stitches. There are three types of border:

Create External Border 🔘

Remove the stitches outside the shape that has been drawn and add a border around the stitches

Create Internal Border 💭

Remove the stitches inside the shape that has been drawn and add a border inside the stitches

Create Overlay Border 🔘

Add the border on top of or with the existing embroidery

The border is always added at the end of the embroidery. If an appliqué option is used, the stitches for placing the appliqué fabric are added at the beginning of the embroidery.

All stitches, including stitches you may have hidden, are used when the new embroidery is created. If you wish to use only the visible stitches, use Select All Visible ∺ to select all the visible stitches, Copy 🗈 the stitches, and use Paste into New Window. Then draw a border shape and use the desired border and appliqué functions.

# **Border** Line

Draw your own border shape with one of the Border Line C functions, Freehand Tablet Border Line 🥒 , or Freehand Point Border Line ≶ .

# Freehand Tablet Border Line

Use Freehand Tablet Border Line 🥒 to draw a line to create a border, optionally with appliqué.

Draw a line, then release the mouse button to finish the line. The line is closed automatically to form a shape. Move the nodes to adjust the shape. Click Delete to remove the last-placed point. Then select a border option.

If the desired line is not achieved when created initially, either redo the line or select and move the nodes as desired.

#### Shortcuts

- Draw Border Line, Border Tab: *2*
- Keys: Alt, B, BL, FT

### Draw a Freehand Tablet Border Line

- 1 If desired, select Add Appliqué 🧠 to use appliqué with your border.
- In Stitch Type, choose the desired line type for the border and use Options ... to select its settings.
- 3 In the Border Line C drop-down menu, click Freehand Tablet Border 🖉 . The pointer changes to the draw pointer 📎 .
- 4 Draw a line on the work area, then release the mouse button. When you release the mouse button the line is drawn as a closed line (a loop) with nodes.
- 5 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer Reg. Adjust the node as desired. Use Ctrl+click to change a round node to a square node, to make the line straight.

Click Delete to remove the last-placed point.

6 When your line is as desired, in the Create Border area select a Border option. The border is placed on the work area.

Right-click to deselect Freehand Tablet Border without placing a border.

# Freehand Point Border Line

Use Freehand Point Border Line 5 to create a border of any shape by placing points. Click Freehand Point Border Line and the pointer changes to the add point pointer  $k_{0}$ . Click a series of points to create an irregular outline of curved and straight lines around the desired area. Use Ctrl and click to place a square (straight line) node. Click Delete to remove the last– placed point. Select a border type when the border is complete.

Right-click to cancel without creating a border.

When the border is sized and positioned as desired, use one of the Create Border functions.

#### Shortcuts

- Draw Border Line, Border Tab: \$\sqrt{s}
- Keys: Alt, B, BL, FP

### Create a Freehand Point Border Line

- 1 If desired, select Add Appliqué 🧠 to use appliqué with your border.
- 2 In Stitch Type, choose the desired line type for the border and use Options 🔜 to select its settings.
- 3 In the Border Line C drop-down list, click Freehand Point Border Line 5. The pointer changes to the Freehand Point pointer  $k_0$ .
- Click to place a series of points for the border.
   As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself.

The line may 'swing' while you place points. Just carry on, you can adjust it afterwards.

- 5 Use Ctrl+click to place square nodes for straight lines. Click Delete to remove the last-placed point.
- 6 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer № Adjust the node as desired. When the Move Node pointer is active you can adjust existing nodes.

If you click while the Freehand Point pointer  $k_{\odot}$  is active, another point will be added to the line.

7 When your line is as desired, select a Border option. The border is placed on the work area. *Right-click to deselect Freehand Point Border without placing a border.* 

# **Border Shape**

Use Border Shape  $\bigcirc$  to draw an outline with the border shape currently selected in the gallery of preset shapes. Click the drop-down arrow to the right of the border shapes gallery, and scroll to select the desired shape in the list. Click Draw Border Shape  $\bigcirc$ , then click and drag over the embroidery to draw a rectangle that sets the size of the shape. Hold down Ctrl to draw in proportion.

When the mouse button is released, the shape will be shown as a red line, with handles to resize, flip and rotate the shape.

For best results when drawing shapes with sharp points, it is recommended to hold down Ctrl so that the shape is perfectly in proportion.

To move the border, click and drag inside the border shape. Resize the border with the resize handles on the corners. If the border shape was initially drawn in proportion, it will stay in

proportion when it is resized. You may also hold Ctrl when resizing non-proportional shapes to retain the current proportions of the shape. Rotate the border with the circular rotate handle on the right. Mirror the border horizontally or vertically with the triangular flip handles on the left and top. The border can extend beyond the edge of the hoop. Right-click to cancel without creating a border.

When the border is sized and positioned as desired, use one of the Create Border functions.

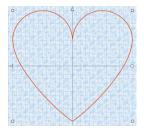

#### Shortcuts

- Draw Border Line, Border Tab: 20
- Keys: Alt, B, BS

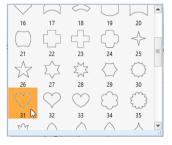

### Cut a Heart Border Shape from Lace

- 1 Click Change Hoop ①. From the Universal Hoop Group, set the Hoop Size to 240mm x 150mm Universal Large Hoop 2. Set the Orientation to Rotated. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Curly Lace' embroidery.
- 5 Click the View tab.

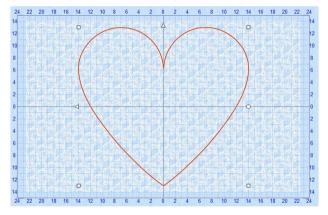

- 6 In Grid, ensure that the grid size is is set to 5mm.
- Click Grid Numbered Full .
   This is so there are grid numbers along the right and lower sides of the stitch area.
- 8 In the Control Strip, click Invert Visible Color Blocks 🏂 to hide the stitches of the lace.
- 9 Ensure Ghost Mode *ministic* is on, so that a pale version of the stitches is shown. Hiding the stitches and using Ghost Mode will make it easier to see where to draw the box for the Border Shape.
- 10 Click the Border tab.
- 11 In Stitch Type, select Satin Line 🥢, then click Options 🔜.
- 12 In the Satin Line dialog box, set the Width for the satin border to 3.5mm and the Density to 4.
- 13 Click OK to close the Satin Line dialog box.
- 14 Click the drop-down arrow to the right of the border shapes gallery and select shape 31, the first heart shape, from the list. If necessary, use the scroll bar at the side of the list to find the shape.
- 15 Click Border Shape 😓.
- 16 Hold down the Ctrl key on the keyboard. This will force the shape to be proportional. Click and drag diagonally across the hoop to draw a box from upper grid line 13 to lower grid line 13, then release the mouse button. The heart shape will be shown on the work area in a selection box.

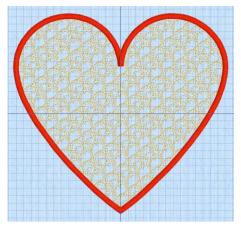

17 If the heart shape is out of the hoop on one side, click and drag inside the shape to ensure it is entirely within the hoop.

Although the stitches are hidden, the Border functions will still affect all stitches in the embroidery. If desired, to see stitches more easily, use the Draw Range slider bar on the Control Strip to change the stitches displayed while adjusting the border shape.

- **18** Click Create External Border **Q**. A heart-shaped border is created.
- 19 Click the Home tab.
- 20 In the Design Select area there are two subdesigns: the heart shape, and a lace background with a heart-shaped hole. Select the lace area and click Delete X. Now only the filled border can be seen.

- 21 In the Design Panel, select the blue thread color for the border, and then click the Thread Color button 🔊 . The Color Selection box will appear.
- 22 Set the Thread Range to Sulky Rayon 40 and browse for thread number 1246 (Orange Flame) in the list and select it, or type 1246 in the Find Thread box.
- 23 Click OK to close the Color Selection box, and the thread sample will change. The border around the heart is now red.

To morph the border of the heart embroidery with Twirl, see "Twirl the Border of a Heart Embroidery" on page 123.

# **Border Embroidery**

Use Border Embroidery 💮 to create a border automatically around the selected embroidery or stitches, using an internal, external or overlay border, optionally with appliqué. Use Margin to set the distance between the selected stitches and the border.

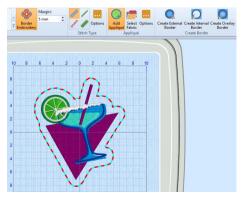

Use a Running Stitch border line for a basting or cutwork line around an embroidery.

#### Shortcuts

- Draw Border Line, Border Tab:
- Keys: Alt, B, BE

## Draw a Border Around an Embroidery Automatically

- 1 Select the Border tab in the ribbon bar.
- 2 Load an embroidery design.
- In Stitch Type, choose the desired line type for the border and use Options ... to select its settings.
- 4 If desired, select Add Appliqué to use appliqué with your border, select an appliqué fabric and click Options ... to set the applique type.
- 5 Select the part of the design that you want to surround by a border. If no part of the design is selected, the border will be placed around the whole embroidery.
- 6 Set the Margin to the desired distance from the stitches in the embroidery.

The initial setting is 10mm.

- 7 Click Border Embroidery . The position for the border is shown by a red and cyan dashed line.
- 8 If desired, adjust the Margin setting. The position of the preview line will change.

Holes within the embroidery, and some appliqué areas, will also have a border, each with its own color block. To remove one of these internal borders, after creation select its color block and delete those stitches.

9 Click to select an External, Internal or Overlay Border. The border is placed around the embroidery.

Right-click to deselect Border Embroidery without placing a border. If there are holes or appliqué areas within the embroidery, only the Create Overlay Border option may be available.

### Margin

Set the distance between the selected stitches or embroidery and the automatic border. You can set Margin from 0 to 50 mm, in steps of 1mm. The initial setting is 10 mm.

# Border Stitch Type

Select a border stitch type, and use Options ... to choose its settings in the dialog box for that stitch type - for example, choose width, pattern, density or stitch length.

Choose from:

- Satin Line 🥖
- Motif Line 🧩
- Running Stitch //
- Triple Stitch 💉

For more information on these stitch types, see "Line Types" on page 240.

# **Create Border**

Use the Create Border options to create a new embroidery with a border in the shape you have drawn and placed. There are three Create Border functions:

- Create External Border
- Create Internal Border
- Create Overlay Border

Draw the desired border shape. Use either a preset shape with Border Shape  $\frac{1}{20}$  or draw your own shape with the Border Line  $\bigcirc$  functions, Freehand Tablet Border Line  $\nearrow$ , or

Freehand Point Border Line 5. Move, scale, rotate and mirror the border shape as desired. Then use the desired Create Border function to create the new embroidery.

#### Create External Border

Create External Border *will* remove the stitches outside the shape that has been drawn and add a border around the stitches. Shortcuts:

Create Border, Border Tab: 🥋 Keys: Alt, B, CE Create Internal Border

Create Internal Border 💭 will

remove the stitches inside the

shape that has been drawn and

add a border inside the stitches.

Create Border, Border Tab: 💭

**Create Overlay Border** 

Create Overlay Border 💭 will add the border on top of the embroidery.

Shortcuts

Create Border, Border Tab: 🤊 Keys: Alt, B, CO

## Add a Satin Border to the Sweet Rose Embroidery

Shortcuts

Kevs: Alt, B, Cl

- 1 Change the background color to pink. See "Add a Basting Line to Sweet Rose Border" on page 158.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Sweet Rose with Buttons' embroidery.

Alternatively, you could use the embroidery you created in "Make Diamond Stamp Buttons for the Sweet Rose Embroidery" on page 173.

- 5 Click the Border tab.
- 6 In Stitch Type, ensure that Satin Line 🥢 is selected, then click Options 🔜.
- 7 In Satin Line, set the Width to 3.5mm, set Density to 4, and ensure Underlay is selected.
- 8 Click OK to close the Satin Line dialog box.
- 9 Click Border Shape 😓.
- 10 In the Shapes drop-down list, select Shape 1 (a rectangle).
- 11 Click and drag to draw a rectangle that surrounds the embroidery, leaving a very small gap below. The gap ensures that the border will not cover the embossed lettering.

If desired, click and drag one of the square corner handles to resize the border shape, or click and drag inside it to adjust the position.

12 Click Create Overlay Border 🧖 A border is placed around the embroidery. Alternatively, to create a quick border with more rounded corners, use

Border Embroidery with the Margin set to 2mm.
13 In the color worksheet, select the color at the bottom (the color for the border).

- 14 Click Thread Color 🔉 . The Color Selection dialog box appears.
- 15 Ensure that Robison-Anton Rayon 40 is selected in the list of thread ranges.

- 16 Browse for thread number 2500 (New Berry) in the list and select it, or type 2500 in the Find Thread box.
- 17 Click OK. The thread color is now a plum color. To add a basting line around the embroidery, see "Add a Basting Line to Sweet Rose Border" on page 158.

# Add Appliqué

Use Add Appliqué 💽 to add appliqué to the border that you create. Appliqué placement stitches are automatically added to the border that you draw.

Select Add Appliqué , and create the desired shape with Border Embroidery , Draw Border Shape , Freehand Tablet reehand Point S Border. Move, scale, rotate and mirror the shape as desired. Use the desired Create Border function: External , Internal reefault or Overlay to create the embroidery.

A new color block, using the same color as the border is placed at the beginning of the embroidery for the appliqué placement stitches. The appliqué placement stitches use the method, appliqué piece margin, running stitch length and double stitch length set in Appliqué Options. A Color Change is also placed at the beginning of the border line, using the default border color. The border uses stitch type settings set in the Line Options for the selected stitch type.

External Appliqué

Create External Border **Q** with appliqué removes the stitches outside the shape that has been drawn. It then adds appliqué placement stitches at the beginning of the embroidery and a border around the stitches.

Internal Appliqué

Create Internal Border 2 with appliqué removes the stitches inside the shape that has been drawn. It then adds appliqué placement stitches at the beginning of the embroidery and a border inside the stitches. Overlay Appliqué

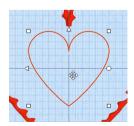

Create Overlay Border with appliqué keeps all the stitches in the embroidery. It then adds appliqué placement stitches at the beginning of the embroidery and a border on top of the embroidery.

### Draw Internal Heart Appliqué

- 1 Click the Hoop icon 🚺 . From the Universal Hoop Group, set the Hoop Size to 240mm x 150mm Universal Large Hoop 2. Set the Orientation to Rotated. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Scalloped Heart' embroidery.
- 5 Click the View tab.
- 6 In Grid, ensure that the grid size is set to 5mm.
- 7 Click Grid Numbered Full . This is so there are grid numbers along the right and lower sides of the stitch area.
- 8 Click the Border tab.
- 9 Set the Stitch Type to Satin Line //.
- 10 In the Stitch Type area, click Options, and in the Satin Line dialog box, ensure that the Width for Satin Line is set to 3.5mm and the Density is set to 4. Click OK.
- 11 In the Appliqué section, click Add Appliqué 🥘 , then click Options 🔜 .
- 12 In the Appliqué Options dialog, in Appliqué Method ensure that the first method (Standard Appliqué) is selected.
- 13 Ensure Running Stitch Length is set to 2.0mm and Double Stitch Length is set to 2.0mm.

🔗 Appliqué Options		×

Appliqué Piece Margin		
OK Cancel Help		

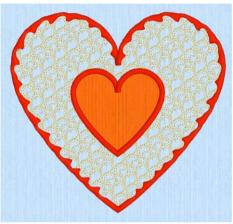

- 14 Click OK to close the Appliqué Options dialog box.
- 15 Click Select Fabric 📂.
- 16 In the Appliqué Selection dialog box, ensure that Quick is selected for Appliqué Type.
- 17 In Quick Colors, select the orange in row 4, column 6.
- 18 Ensure that the Texture is set to Woven, then click OK.
- **19** Click the drop-down arrow next to the currently selected preset border shape and select shape 31, the first heart shape, from the list.
- **20** In the color worksheet on the Design Panel, click the check box for the first thread color to hide the stitches of the lace.
- 21 Click Border Shape 😓.
- 22 Hold down Ctrl to draw a proportional shape, and draw from left grid line 6 to right grid line 6, so that the box is 12 grid squares wide.
- 23 Release the mouse button and the heart shape appears as a red line.
- 24 Click and drag inside the small heart shape and move it to the center of the hoop. The shape is centered when the points of the flip handles are on the center grid lines.

- 25 Click Create Internal Border 2. The lace stitches in the central part of the embroidery are replaced by an appliqué area.
- 26 Click the Home tab.
- 27 In the Design Select area there are two subdesigns: a heart with an internal and external border, and a lace heart with no border. Select the lace heart and click Delete X.
- 28 The first and last colors in the embroidery should match the red for the external border. Select the first color. *These are the appliqué placement stitches.*
- 29 Click the Thread Color button and change the thread color to Sulky Rayon 40 thread number 1246 (Orange Flame).

30 Select the final color (the internal border) and change the thread color to Sulky Rayon 40 thread number 1246 (Orange Flame).

# Select Fabric

Use Select Fabric 📂 to audition a fabric for your appliqué in the Appliqué Selection dialog box.

Click Select Fabric 📂 and the Appliqué Selection dialog box appears. See "Appliqué Selection" on page 91.

Shortcuts

- Appliqué, Border Tab: 199
- Keys: Alt, B, SF

# **Appliqué Selection**

Use the Appliqué Selection dialog box to select a fabric or picture to use for appliqué. Click OK to use the selected appliqué fabric.

Preview the appliqué fabric	0

### Appliqué Type

Choose an appliqué type (or simply select one of the recently used swatches). Select from:

Quick

Select a color and texture for your fabric. See "Quick Appliqué Options" on page 91.

Fabric

Select a background fabric, or add a new background fabric from a picture. Set the angle for the fabric. See "Fabric Options" on page 92.

Picture

Create in individual non-tiling appliqué from a picture. For instance, use a photo for a printed appliqué memory piece. See "Picture Options" on page 92.

Cut-out

Create an appliqué placement line as a guide to where the fabric should be cut to form a hole; for example, for reverse appliqué.

### **Quick Appliqué Options**

The Quick Appliqué Options are available when Quick is selected in Appliqué Type. Select a color and texture for your fabric.

Color

Click the color sample to change the color in the Colors dialog box. See "Colors Dialog Box" on page 120.

#### **Quick Colors**

Click one of the Quick Colors to select a color for the fabric. Use the drop-down menu to choose a different Quick Colors theme, or to create your own theme. See "Quick Color Themes" on page 117.

#### Texture

Select the texture to use for the fabric. Click on the down arrow and choose the desired fabric type.

### **Fabric Options**

The Fabric Options are available when Fabric is selected in Appliqué Type.

Load Previously Saved Fabric

Use Load Previously Saved Fabric 🔎 to load a

sample fabric, or a fabric from My Fabrics, in the Picture Viewer. See "Background Picture Viewer" on page 94.

#### Add New Background Fabric

Use Add New Background Fabric 🗱 to create a new fabric background in the Background Wizard. See "Background Wizard" on page 94.

#### Angle

Use Angle to change the angle at which the pattern will be displayed.

You may also change the angle and position of the fabric pattern directly by selecting the appliqué piece in the work area.

Enter an Angle from 0 to 359 degrees. The initial setting is 0. Alter the Angle by entering a number in the box, or use the up and down arrows to change the number. Changes in Angle are visible in the preview pane.

#### **Print Sheet**

Print a sheet of appliqué fabric from the selected Quick Appliqué or Fabric pattern. Flip the picture for an iron-on transfer, and select a printer and paper size in the Print Setup dialog box. See "Print Setup" on page 255.

#### **Picture Options**

The Picture Options are available when Picture is selected in Appliqué Type. Click Select Picture to create a picture background in the Load Picture Wizard. See "Load Picture Wizard" on page 101.

#### **Fabric Preview**

The chosen fabric is previewed on the right.

#### **Recent Swatches**

Select a recently used fabric to use again.

### Appliqué Piece Margin

Set the margin for appliqué placement relative to the border shape from -10mm to 10mm. The initial value is 1.0mm.

- Use a positive value when trimming the appliqué fabric before the border is stitched, for example with Standard Appliqué and Pre-placed Appliqué.
- A negative value is recommended for cut-out and reverse appliqué.

Appliqué Piece Margin is only available when adjusting Express Appliqué.

# **Background Picture Viewer**

Use the Background Picture Viewer to select a fabric from the system fabrics, or from the My Fabrics folder with fabric backgrounds you have added.

	🔗 Picture Viewer	×
Choose a fabric folder	Animals Animals Checkerboard Chewrons	^

The following file formats may be loaded: Windows or OS2 Bitmap (.bmp), JPEG-JFIF Compliant (.jpg, .jif, .jpeg), Portable Network Graphics (.png), Tagged Image File Format uncompressed (.tiff, .tif), Windows Meta File (.wmf), Windows Enhanced Meta File (.emf) and Windows Icon (.ico).

## Load a Picture for a Background

- 1 Click Load a Picture 🎥 and the Picture Viewer dialog box appears.
- 2 Double-click to expand the folders until the desired folder is highlighted, for example: Documents\Premier+2\Samples\Modify\Pics
- 3 Click on a picture to select it.
- 4 Click OK to open the picture in the Choose Picture page.
- 5 Click Cancel to exit without selecting a picture.

#### **Paste Picture**

Use Paste Picture 📸 to load the picture in the Clipboard Block.

#### From Scanner or Camera

Use From Scanner or Camera is to display the program that is used to acquire pictures from a scanner, a digital camera or another suitable device. Only devices that use WIA can be used to obtain pictures.

WIA is a standard method for transferring pictures from the device's scanning or downloading program to another program. If the manufacturer provides the appropriate software components needed for WIA compliance, these should have been installed when the device was installed. Each scanner or digital camera has its own program that is used to scan or download pictures. Refer to the manual or online help provided with the program for instructions, if required. When the device and its software finish processing the picture, it will be shown in the Choose Picture page.

Each scanner or digital camera has its own program that is used to scan or download pictures. Refer to the manual or online help provided with the program for instructions, if

required. When the device and its software finish processing the Picture, it will be shown in the Choose Picture page.

#### Social Media Picture

Load a picture from Facebook<sup>®</sup> **f**, Instagram<sup>®</sup> **s**, Flickr<sup>®</sup> **••**, or Twitter<sup>®</sup> **y**. Log in to the Social Media website to load the desired picture.

#### Preview and Name

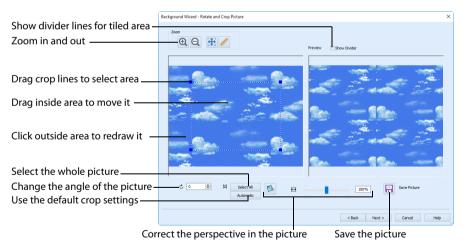

Under the preview pane is a box for the name of the chosen file. If the picture is a scanned image then the box will contain the words Scanned Picture.

## **Rotate and Crop Picture**

Use the Rotate and Crop Picture page of the Background Wizard to prepare a picture for a fabric.

- To adjust the crop area, position the mouse over the crop boundary until a double-headed arrow ⇔ appears, then click and drag to move the boundary line.
- To move the crop area, position the mouse inside the crop boundary until a four-headed arrow ∰ appears, then click and drag to move the whole rectangle.
- To redraw the crop area, click and drag outside the crop boundary to draw a new rectangle, which can then be adjusted as required.

Initially, about half the area of the picture is selected from the middle of the picture, as shown by the dashed box in the picture on the left. The preview on the right shows four copies of the selected fabric area tiled together.

The tiled preview will change dynamically as you change the crop area.

To see where the four sections of the background are joined, select the Show Divider option. Dashed lines show where the tiled sections will be joined. This is useful for patterned fabric, to ensure the pattern repeats as desired.

When the desired area is selected, click Next.

#### Rotate

Rotate C the picture from 0 to 359 degrees. Adjust the picture angle as desired. This is often necessary with scanned pictures.

Enter the desired Rotation angle  $\circ$  or use the up/down arrows to change the angle. The preview will show the effect.

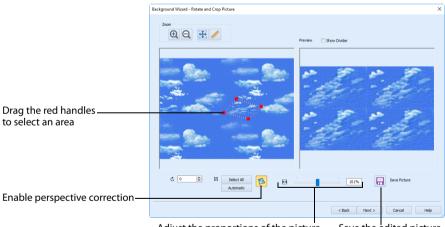

When the picture is rotated between the 90 degree steps, the picture is made larger and white background is added.

### Select All and Automatic

Use Select All to select the whole of the picture. Use Automatic to set the crop lines back to the default position for the current picture.

## **Perspective Correction**

To remove the effects of perspective in a picture, or to correct skew, select Perspective Correction N. When using Perspective Correction, the crop handles are red.

Adjust the proportions of the picture Sa

Save the edited picture

Move the red handles so that the crop lines frame the picture. Use the Zoom tools to view the outline of the picture more clearly. Drag the Stretch Picture 🔛 slider to make the picture in the Preview wider or narrower. Use Save Picture 🔚 to save your edited picture.

#### Zoom

Use the Zoom functions to change the view of the picture.

The fabric preview on the right is not affected by zoom.

Use Zoom In 0 to magnify the view. Move the pointer over the picture and the pointer changes to the zoom in pointer 0. Then either click a point you want to zoom in towards, or click and drag a rectangle around the area you want to zoom in to and release the mouse button to zoom. When zoomed in, use the scroll bars to move around.

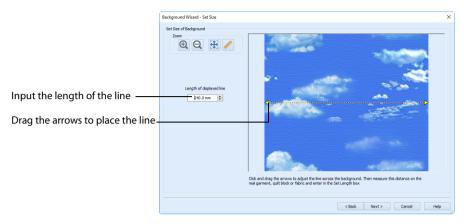

Use Zoom Out  $\bigcirc$  to shrink the view. Move the pointer over the picture and the pointer changes to the zoom out pointer  $\bigcirc$ . Then click a point you want to zoom out from.

Click Zoom To Fit 🔁 to fit the picture to the preview area.

Click Real Size 🧪 to view the picture at its real size in pixels. This means that one pixel of the picture uses one pixel of the screen.

# Set Size

Use Set Size to enter a real measurement of the fabric so that it will be displayed at real size when it is used as the appliqué fabric.

The cropped section of fabric is shown in the preview. Click and drag the arrows at either end of the yellow line to place a line across the picture. This should match a measurement you have made across the same area of the real fabric.

Then enter the length of the line in the 'Length of displayed line' text box, or use the up/ down arrows.

The length can be from 1mm to 300mm. However, the fabric tile must not be larger than 300mm x 300mm, so if the line does not span the whole picture it must be shorter than 300mm.

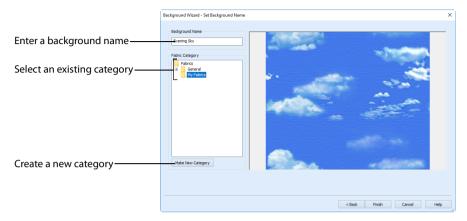

If the length would make the fabric tile larger than 300mm in either dimension, a message will appear. Repeat the process so that the tile is smaller.

Click OK and the measurement you entered will be shown next to the picture. Check that the line and the length matches the measurement you made of the real fabric. If desired, click and drag the arrows to place a new line and re-enter the line length.

When the line is measured correctly, click Next.

# Set Background Name

Use Set Background Name to save the finished appliqué fabric in a category and give it a name. The categories are the folder names you will see when browsing for existing backgrounds.

#### **Background Name**

If you started with an existing picture, the picture name will be shown by default as the name for the new background. If you scanned a new picture, it will not have a name so you will need to enter a name.

#### Fabric Category

The default category is My Fabrics. To choose a different category, browse among the folders in Fabrics.

Select from existing categories, or click Make New Category to provide the name of a new category.

#### Make New Category

To make a new category, click Make New Category, and enter a new folder name. Click OK to create the category.

The new category will be created as a subfolder for the currently selected type. When make a new category, it will be available as a Fabric Category next time you use the Background Wizard.

#### Finish

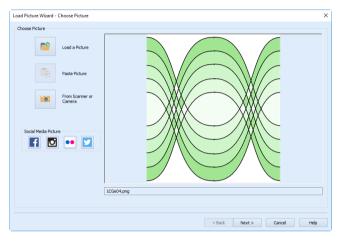

Click Finish to save the new background with the specified name in the specified Fabric Category and close the Background Wizard. The selected or new background will be displayed in the Appliqué Selection dialog.

# Load Picture Wizard

Use the Load Picture Wizard to use a picture as an individual non-tiled appliqué background, for example for a printed appliqué memory piece.

To create a new picture in the Load Picture Wizard, in the Appliqué Selection dialog box select Picture, then click Select Picture.

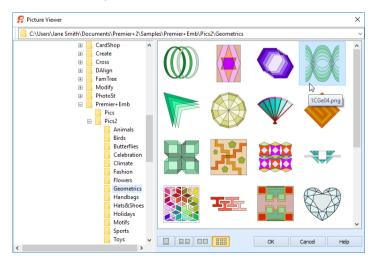

# **Choose Picture**

Use the Choose Picture page to select the picture you wish to use as a background.

### Load Picture

Click Load Picture Picture to open a picture from your My Pictures folder. Alternatively, browse to a folder elsewhere on your computer. After selecting a picture, the preview box will show the selected picture with its name underneath.

The following file formats may be loaded: Windows or OS2 Bitmap (.bmp), JPEG-JFIF Compliant (.jpg, .jif, .jpeg), PatternCAD (.4dq), Portable Network Graphics (.png), Tagged Image File Format uncompressed (.tiff., tif), Windows Meta File (.wmf), Windows Enhanced Meta File (.emf) and Windows Icon (.ico).

## Load a Picture with the Viewer

- 1 Click Load a Picture he and the Picture Viewer dialog box appears.
- 2 Double-click to expand the folders until the desired folder is highlighted.
- 3 If desired, change the icon size to see more or fewer pictures.
- 4 Click on a picture to select it.
- 5 Click OK to open the picture with its name underneath.
- 6 Click Cancel to exit without selecting a picture.

## Paste Picture

Click Paste Picture 💼 to load the picture in the Clipboard Block. The picture is shown in the preview area.

Paste Picture is not available if the Clipboard Block is empty.

## From Scanner or Camera

Use From Scanner or Camera is to display the program that is used to acquire pictures from a scanner, a digital camera or another suitable device. Only devices that use Windows Image Acquisition (WIA) can be used to obtain pictures.

WIA is a standard method for transferring pictures from the device's scanning or downloading program to another program. If the manufacturer provides the appropriate software components needed for WIA compliance, these should have been installed when the device was installed.

Each scanner or digital camera has its own program that is used to scan or download pictures. Refer to the manual or online help provided with the program for instructions, if required. When the device and its software finish processing the picture, it will be shown in the Choose Picture page.

## Social Media Picture

Load a picture from Facebook<sup>®</sup> **f**, Instagram<sup>®</sup> **s**, Flickr<sup>®</sup> **••**, or Twitter<sup>®</sup> **s**. Log in to the Social Media website to load the desired picture.

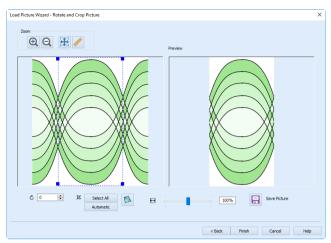

### Preview and Name

Under the preview pane is a box for the name of the chosen file. If the picture is a scanned image then the box will contain the words Scanned Picture.

#### Next

Go to the Crop Picture page.

# **Rotate and Crop Picture**

Use the Rotate and Crop Picture page to select the section of the picture that is to be used to create the appliqué background. If required, rotate the picture, and click and drag the boundary line of the crop area to select the desired part of the picture.

Click and drag anywhere inside the crop box to move the crop box.

If you need to expand a crop box again, make sure it is not touching the edge of the frame, as this will stop it expanding.

When the desired area is selected, click Finish.

#### Rotate

Rotate <sup>O</sup> the picture from 0 to 359 degrees. Adjust the picture angle as desired. This is often necessary with scanned pictures.

Enter the desired Rotation angle 🔮 or use the up/down arrows to change the angle. The preview will show the effect.

When the picture is rotated between the 90 degree steps, the picture is made larger and white background is added.

#### Select All and Automatic

Use Select All to select the whole of the picture. Use Automatic to set the crop lines back to the default position for the current picture.

#### **Perspective Correction**

To remove the effects of perspective in a picture, or to correct skew, select Perspective Correction 🔊. When using Perspective Correction, the crop handles are red.

Move the red handles so that the crop lines frame the picture. Use the Zoom tools to view the outline of the picture more clearly. Drag the Stretch Picture 🔛 slider to make the picture in the Preview wider or narrower. Use Save Picture 🔚 to save your edited picture.

# Zoom

Use the Zoom functions to change the view of the picture.

Use Zoom In <table-row> to magnify the view. Move the pointer over the picture and the pointer changes to the zoom in pointer 🎕 . Then either click a point you want to zoom in towards, or click and drag a rectangle around the area you want to zoom in to and release the mouse button to zoom. When zoomed in, use the scroll bars to move around.

Use Zoom Out  $\bigcirc$  to shrink the view. Move the pointer over the picture and the pointer changes to the zoom out pointer  $\bigcirc$ . Then click a point you want to zoom out from.

Click Zoom To Fit 🔁 to fit the picture to the preview area.

Click Real Size 🧪 to view the picture at its real size in pixels. This means that one pixel of the picture uses one pixel of the screen.

# Back

Return to the Choose Picture page.

# Finish

Use the selected image for the appliqué

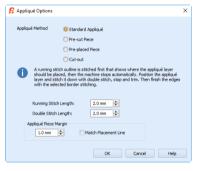

# Appliqué Options

Use the Appliqué Options dialog box to select an Appliqué Method for appliqué placement, and set the Appliqué Piece Margin, the Running Stitch Length, and the Double Stitch Length.

Use the Appliqué Options when adding a border to an embroidery.

#### Appliqué Placement

When appliqué is created from a border shape, additional stitches are added at the beginning of the embroidery for placing appliqué fabric. Use

these options to determine how these stitches are added. The border used to finish the appliqué uses line options for the selected border stitch type.

### Appliqué Method

Choose the method for placing and securing the appliqué fabric.

Standard Appliqué

Stitch a running line to show where appliqué fabric should be placed, then stop to position the fabric. Stitch down the appliqué fabric with double stitch, then stop so the fabric may be trimmed. Finish the edges with the selected border stitching.

#### Pre-cut Piece

Use a pre-cut appliqué piece created, for example, using an automatic cutter or cutwork needles.

Stitch a running line to show where the pre-cut appliqué piece should be placed, then stop to position the appliqué piece. Stitch down the appliqué piece with double stitch, then finish the edges with the selected border stitching.

Pre-placed Piece

Place the appliqué fabric before stitching.

Place the appliqué layer in position, then stitch down the appliqué fabric with double stitch. Stop so the fabric may be trimmed. Finish the edges with the selected border stitching.

Cut-out

Use the appliqué placement line as a guide to where the fabric should be cut; for example for reverse appliqué.

Stitch a double stitch line. Stop so the fabric may be cut to form a hole defined by the stitched outline. Finish the edges with the selected border stitching.

#### Appliqué Piece Margin

Set the margin for appliqué placement relative to the drawn border shape from -10mm to 10mm. The initial value is 1.0mm.

Use a positive value when trimming the appliqué fabric before the border is stitched, for example with Standard Appliqué and Pre-placed Appliqué . A negative value is recommended for cut-out and reverse appliqué.

#### Match Placement Line

Adjust the position of the first running stitch line for either Standard Appliqué or Pre-cut Piece so that it matches the outline of the appliqué piece after the Appliqué Piece Margin has been applied.

This may be useful for precise positioning of appliqué pieces that have been pre-cut with an automated cutter, to ensure the placement line is visible.

#### **Running Stitch Length**

Set the length of running stitch used for the placement outline in the first and second appliqué methods, from 1 to 12mm in 0.1mm steps. The initial setting is 2.0mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

#### **Double Stitch Length**

Set the length of double stitch used to stitch down the appliqué fabric, from 1 to 12mm in 0.1mm steps. The initial setting is 2.0mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

# Appliqué Piece

Use the Appliqué Piece functions to add appliqué fabric to an existing design with appliqué areas, and to adjust appliqué areas within a design.

Use Express Appliqué 🥘 to automatically find appliqué areas in some existing embroideries.

### Change the Fabric in an Appliqué Embroidery

- 1 Open PREMIER+<sup>™</sup> 2 Embroidery, and click the SuperDesign tab.
- 2 Select the Appliqué Category.
- 3 In the Children 1 SuperDesign set, select the 8th design, Happy Sun. Use Style 1, with a satin line border.
- 4 Click Apply to place the sun embroidery in the work area. It has green handles, indicating that it is a SuperDesign.
- 5 In the Home tab, click Copy 📄. The design is placed in the Clipboard block.
- 6 Open PREMIER+<sup>™</sup> 2 Modify.
- 7 If there is an embroidery in the work area, click New <a>href="https://www.inite.com">https://www.inite.com</a>.
- 8 In the Home tab, click Paste and click Yes to continue. The sun design is placed in the work area. If you click Select All Visible you will see white or blue handles, indicating that it is now an embroidery. When a SuperDesign is copied and pasted between modules it is converted into an embroidery.
- 9 Click the Appliqué tab.
- 10 Click Next Piece . All of the appliqué functions are now available.
- 11 The points for the outer appliqué area should be highlighted. If not, click Next Piece > until they are.
- 12 Click and drag the square zigzag fabric handle . The fabric for the sun's rays moves.

Use the Fabric Handle to move the origin point (center of design) of a tiled fabric. This handle and is only available for fabric tiles; you cannot rotate quick Appliqué or Pictures.

13 Click and drag the round handle. The fabric for the sun's rays rotates. The fabric rotates around the fabric handle (the origin point of the sunt of the sun

The fabric rotates around the fabric handle (the origin point of the fabric tile).

- 14 Click Select Fabric 🚎. The Appliqué Selection dialog box opens.
- 15 To change the fabric, click Fabric in Appliqué Type, then click Load Previously Saved Fabric an choose another fabric.
- 16 Click OK to close the Appliqué Selection dialog box.
- 17 Click Next Piece D. The points for the inner appliqué area are highlighted. You can now change, move or rotate the central appliqué fabric.

# Appliqué Outline

Use the Appliqué Outline Official functions to draw or place points to define a line of any shape to create an appliqué outline.

# Freehand Tablet Appliqué Outline

Use Freehand Tablet Appliqué Outline 💓 to draw a line of any shape to create an appliqué outline.

Select a Color Command or Stop Command to start the appliqué piece from, then draw the outline. When hovering over a Color Command you will see the stitching that follows it. Release the mouse button to complete the line. Right-click, and the Appliqué Selection dialog box opens. Select a fabric, then click OK to place the Appliqué Piece.

Hold down Ctrl to place a corner point when creating or editing a line. Click Delete  $\mathbf{X}$  on the Home tab to remove the last-placed point.

Shortcuts

- Create, Appliqué Tab: *I*
- Keys: Alt, A, AO, FT

# Freehand Point Appliqué Outline

Use Freehand Point Appliqué Outline ≶ to place points to define a line of any shape to create an appliqué outline.

Select a Color Command or Stop Command to start the appliqué piece from, then place points to draw the outline. When hovering over a Color Command you will see the stitching that follows it. Right-click to finish, and the Appliqué Selection dialog box opens. Select a fabric, then click OK to place the Appliqué Piece.

Hold down Ctrl to place a corner point when creating or editing a line. Click Delete  $\mathbf{X}$  on the Home tab to remove the last-placed point.

#### Shortcuts

- Create, Appliqué Tab:
- Keys: Alt, A, AO, FP

#### Add an Appliqué Fabric to a Flower Bouquet Embroidery

- 1 Click Change Hoop ①. From the Universal Hoop Group, set the Hoop Size to 100mm x 100mm Universal Square Hoop 1. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Appliqué Bouquet' .vp3 format embroidery.
- 5 Click the View tab.
- 6 Ensure that Commands 🍪 is selected.

7 In the Design Panel there are three green color blocks at the top of the worksheet. Use the pointer to highlight the names; they are all the same thread.

The appliqué stitch lines in this embroidery are marked by Color Commands rather than Stop Commands.

- 8 Below the Control Strip, click Draw Next Color Block . The running stitch line outlining the embroidery is shown, with a Color command marker at the top. Hover over the Color Command and you will see the stitching that follows it, which is the outline of the appliqué area.
- 9 In the bottom left corner of the window, click the up arrow next to the numbers box to the right. At the top of the embroidery a second Color command marker @ appears. This is the start of the stitch line that secures the appliqué fabric.
- 10 Click the Appliqué tab.
- 11 In the Appliqué Outline 🔘 drop-down menu, click Freehand Point Appliqué Outline 🛐
- 12 Click the second Color command marker (a) (the upper one).
- 13 Click to place points just outside the outline of the appliqué area.

Hold down Ctrl to place a corner point, and click Delete  $\times$  on the Home tab if you need to remove the last-placed point. The second line of stitching lies just outside the first line, so add a slight margin for the fabric to be secured by this line.

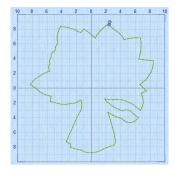

- 14 Place the last point at the Color command where you started. Don't worry if your line is uneven; you can change it afterwards.
- **15** Move the points on the line to reshape it as desired.
- **16** Right-click. The Appliqué Selection dialog box opens.
- 17 In Appliqué Type, ensure that Quick is selected.
- **18** Click the arrow to the right of the Quick Colors, and select Fall from the drop-down menu.
- **19** Click the color in row 3, column 1 (a pale green).

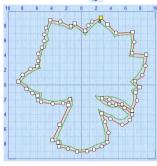

- 21 Below the Control Strip, click Draw All Stitches
- 22 Click and drag any points in your appliqué line that lie outside the edge of the embroidery, so that none of the fabric overlaps.

You can use Insert Points  $\mathcal{A}_{s}$  to add points to this line, and Delete Points  $\mathcal{H}$  to remove any unwanted points.

- 23 Click outside the embroidery. You can no longer see the outline of the appliqué piece. Select Piece is available. This indicates that the embroidery contains an appliqué piece.
- 24 Click Next Piece **>**. Your appliqué piece is selected again.
- 25 Click Select Fabric . The Appliqué Selection dialog box opens again, with your selected tabric previewed. Use the Appliqué Selection dialog box to change the fabric for existing appliqué. Audition new fabrics and visaulize the effect using the Apply button.
- 26 Click Cancel to close the dialog box.
- 27 Click Design Player [2], then click Start > to play the design from the beginning. The appliqué is placed after the first line of running stitch, and before the second line. You can also view the structure of the embroidery using the sliders on the Control Strip.
- **28** In the Quick Access toolbar, click Save As **[3]**.
- 29 Save the embroidery in your My Designs folder as Appliqué Bouquet with Fabric.vp4. In .vp4 format the appliqué information is saved.
- 30 Close PREMIER+<sup>™</sup> 2 Modify, then open it again.
- 31 Open the file you just saved. You can see the appliqué piece that you created.

# Appliqué Hole

Use the Appliqué Hole of functions to draw or place points to define a line of any shape to create a hole within the selected appliqué area. Select the desired Appliqué Piece so its points are displayed, then draw the hole.

# Freehand Tablet Appliqué Hole

Use Freehand Tablet Appliqué Hole 🥒 to draw a line of any shape to create a hole within the selected appliqué area.

Select the desired Appliqué Piece so its points are displayed, then draw a line to form the hole. Release the mouse button to complete the line. Any appliqué fabric is removed from the hole. Right-click to deselect.

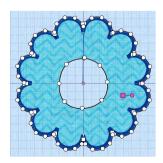

Hold down Ctrl to place a corner point when creating or editing a line. Click Delete to remove the lastplaced point.

#### Shortcuts

- Create, Appliqué Tab: 🥖
- Keys: Alt, A, AH, FT

#### Draw a Hole in an Appliqué Area

- 1 Click the Border tab, and click Add Appliqué.
- 2 Select the fabric of your choice, then use Border Shape on and draw an external border . See "Border Shape" on page 83.
- 3 Click the Appliqué tab.
- 4 In Appliqué Hole <sup>(</sup>), select Freehand Tablet Appliqué Hole <sup>(</sup>). If Appliqué Hole is not available, click Next Piece <sup>(</sup>) to select the appliqué piece, then click Appliqué Hole.
- 5 Draw a circle in the middle of your appliqué area. The hole is created.
- 6 The Right-click to deselect Freehand Tablet Appliqué Hole.

# Freehand Point Appliqué Hole

Use Freehand Point Appliqué Hole ≶ to place points to define a line of any shape to create a hole within the selected appliqué area.

Select the desired Appliqué Piece so its points are displayed, then place points to draw a hole. Right-click, and any appliqué fabric is removed from the hole.

Hold down Ctrl to place a corner point when creating or editing a line. Click Delete to remove the lastplaced point.

Shortcuts

- Create, Appliqué Tab:
- Keys: Alt, A, AH, FP

# Express Appliqué

Use Express Appliqué on automatically find appliqué stitches within the visible stitches of some existing embroideries, and apply an appliqué fabric to them.

Multiple appliqué areas can be detected in the same subdesign. Use the selection tools and Control Strip to hide areas where you don't want appliqué added.

In the Appliqué window, select an appliqué embroidery with no fabric, click Express Appliqué , then add a fabric in the Appliqué Selection dialog box. Optionally, adjust the overlap margin.

Express Appliqué detects the pattern of Stop and Color Change Commands used with appliqué placement stitches, and inserts appliqué fabric in that area. If an appliqué area is not detected automatically, use Freehand Tablet Appliqué Outline or Freehand Point Appliqué Outline to define it.

#### Shortcuts

- Create, Appliqué Tab: 🧶
- Keys: Alt, A, Q

### Add Appliqué to a Sun Embroidery

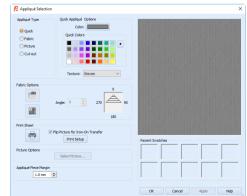

- 1 Click Change Hoop (). From the Universal Hoop Group, set the Hoop Size to 200mm x 200mm Universal Square Hoop 3. Click OK.
- 2 Click File, New To open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 Browse to the folder Documents\Premier+2\Samples\ Premier+2Emb\Stitch and load the embroidery 'Sunshine Applique Large with Lettering'. The design contains three subdesigns. Click You when told that the decign will be five

Click Yes when told that the design will be fixed as stitches. The lettering is the part of the design that will be fixed as stitches.

5 In the Home tab, click to select the first subdesign in the Design Select area (the sun embroidery). This is the part of the design with an appliqué

area.

6 Click the Appliqué tab.

Use Previous Piece < to select the previous Appliqué Piece in the stitchout order.

Previous Piece will select an appliqué piece even if no appliqué piece is currently selected.

Use Next Piece >> to select the next Appliqué Piece in the stitchout order. Next Piece will select an appliqué piece even if no appliqué piece is currently selected.

- 7 Click Express Appliqué 🥘. The Appliqué Selection dialog box opens so you can choose a fabric for your appliqué. Express Appliqué detects the pattern of Stop and Color Change Commands used by appliqué placement stitches and inserts appliqué fabric in that area.
- 8 In Appliqué Type, click Fabric.
- Click Load Previously Saved Fabric to load 9 a fabric in the Picture Viewer.
- 10 Browse to the folder General\Lattice.
- 11 Click the fabric Lattice 1 - 18, then click OK. The Picture Viewer will close and the fabric will be shown in the Appliqué Selection dialog box. If desired, adjust the Appliqué Piece Margin.
- Click OK to close the Appliqué Selection dialog box. The fabric is shown under the sun's face, as if you 12 had stitched it down as an appliqué.

Use Select Piece 🦱 to select an Appliqué Piece to alter its shape and preview or adjust its

Picture Viewer

General

Animals Bricks & Tiles Checkerboard Chevrons Circles Climate Cubes Diamonds Dots Feathers Fur & Leathers Halloween

- 13 In the Quick Access toolbar, click Life View 🗿.
- Move the Zoom Bar slider to the right so that you can see the 14 embroiderv clearly.

Note that the threads for the sun's face and lettering are white.

- 15 Click Solar Reactive 🥘. The white threads turn yellow and orange.
- In the Quick Access toolbar, click Save As 🔜 and save the 16 embroidery with the appliqué and background as 'Sunshine' Applique Large with Lettering and Applique'. The sun and lettering will be stored separately within this multipart embroidery, making further adjustment easier.

Click Select Piece 🥘, and then click the desired Appliqué Piece.

Select Piece

fabric.

### Select Appliqué Pieces

- 1 Open PREMIER+<sup>™</sup> 2 Embroidery Extra, and click the SuperDesign tab.
- 2 Select the Appliqué Category.
- 3 In the Children 1 SuperDesign set, select the 5th design, Blocks. Use Style 1, with a satin line border.
- 4 Click Apply to place the ABC blocks in the work area. The embroidery has green handles, indicating that it is a SuperDesign.
- 5 In the Home tab, click Copy 📄. The design is placed in the Clipboard block.
- 6 Open PREMIER+<sup>™</sup> 2 Modify.
- 7 In the Home tab, click Paste 🚔, then click Yes to continue. The blocks appear in the work area.
- 8 Click the Appliqué tab. Note that the Select Piece icon 💽 is available. This indicates that there is at least one apppliqué piece in the embroidery.
- 9 Click Select Piece , then click the A block. The points outlining the appliqué appear.
- 10 Click and drag one of the points to change the shape of the appliqué. Note that you can change the shape of the appliqué area, but this does not affect the satin border.
- 11 Click Undo y to return to the original shape. You can also use the Fabric Handle —• to change the position and rotation of the fabric.
- 12 Click Next Piece **>**. The letter C block is now selected.
- 13 Click Previous Piece < twice. First the A and then the B are selected.
- 14 Click Delete Piece 💽. The appliqué fabric for the B block is removed, leaving the border lines for the block.

#### **Insert Points**

Use Insert Points 🦧 to add new points into the currently selected Appliqué Piece.

Select the desired appliqué piece, then click Insert Points  $\mathcal{A}_{n}$ . The pointer changes to the plus pointer  $\mathbb{Q}_{0}$ . Click to add a point to the outline of the selected area. Right-click to finish adding points.

Hold down Ctrl to place a straight line or corner point. Click Undo 💋 to remove the new point.

#### Shortcuts

- Edit, Appliqué Tab: <sub>K</sub>
- Keys: Alt, A, I

### **Delete Points**

Use Delete Points 💥 to delete points from the currently selected Appliqué Piece.

Select the desired appliqué piece, then click Delete Points  $\mathbb{X}^{-}$ . The pointer changes to the minus pointer  $\mathbb{R}^{-}$ . Click to remove a point from the outline of the selected area. Right-click to finish deleting points.

Click Undo 💋 to replace a deleted point.

Shortcuts

- Edit, Appliqué Tab: 🗱
- Keys: Alt, A, DP

### **Delete Piece**

Use Delete Piece 🌏 to delete the currently selected Appliqué Piece with its outline.

Select the desired appliqué piece, then click Delete Piece Q. The appliqué piece is removed from the design.

Shortcuts

- Edit, Appliqué Tab: Q
- Keys: Alt, A, DE

# Select Fabric

Use Select Fabric 📂 to audition a fabric for the selected appliqué piece in the Appliqué Selection dialog box.

Select the desired appliqué piece, then click Select Fabric 📂 and the Appliqué Selection dialog box appears. See "Appliqué Selection" on page 91.

Shortcuts

- Edit, Appliqué Tab:
- Keys: Alt, A, SF

# Export Appliqué

Use Export Appliqué Pieces 🛃 in the File menu to save or print appliqué outlines ready for cutting.

There are five export methods: save as SVG, DXF of FCM files for use in fabric cutters, save as VP4 or VP3 stitch files for use with INSPIRA<sup>™</sup> Cutwork Needles, print as an outline template to cut around, print directly onto printable fabric or an iron-on transfer (this prints the image of the appliqué piece), or save as SVG files with the fabric image placed as the fill for each shape (for use with fully customized layouts).

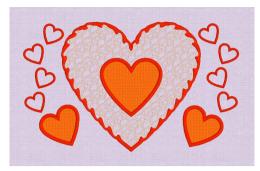

See "Export Appliqué Pieces" on page 23 for more information.

# Border and Appliqué Techniques

There are many ways the Border/Appliqué functions can be used creatively.

# **Decorative Shapes**

Use the Overlay option to simply add border or appliqué shapes as decorative additions to an embroidery. With the Overlay option, shapes can be added to the embroidery in any position. Hence, several small border or appliqué shapes can be added to the sides, such as the small hearts in the picture below.

Alternatively, add overlays within the embroidery to surround elements of the design.

# Appliqué Patch within Bordered Embroidery

First create an External Border around the embroidery. Then create either an Internal Border with appliqué or an Overlay Border with appliqué.

If an Overlay Border with appliqué had been used in the example above, the Curly Lace embroidery would also have stitched over the appliqué fabric in the center, giving a different effect. With other border shapes, it will also be effective to place the appliqué shape towards a corner or edge of the External Border.

# Multiple Appliqué Patches

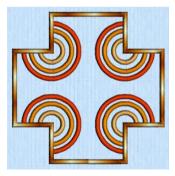

Create as many appliqué areas as desired. When stitching out, the appliqué fabric inserts are placed in the reverse order to the order the appliqué areas were created.

If you wish to have overlapping appliqué areas, it is recommended to select the second appliqué method in Appliqué Options, as this will show the changes to the shapes of overlapped areas when you stitch out the embroidery. It is also recommended to play through the embroidery, with Stitch Player, the slider bars, or the Design Player so that you can anticipate the order in which the appliqué areas will be created.

# Drawing Border Shapes as the Design

Start a New embroidery. Draw the first border shape as desired, then Create External Border. A new embroidery is created that only consists of the border. Add further border shapes as desired, generally using the Overlay Border option. Use the Select functions with Copy and Paste to make identical copies of the same shape. Use External and Internal border where you wish to cut through previously created border shapes.

A new embroidery is created each time a new border is created, so you can return to any stage of the creative process to try different ideas.

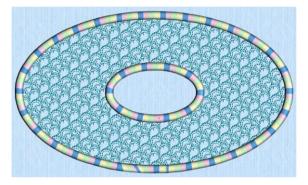

# Double Border

Create the same border shape twice, one around the other, to make a double border. This is effective as an alternative type of frame, and works best with simple border shapes. Create the inner border first. This effect looks best if the border width and the gap between the double borders are approximately the same.

# Border Donut

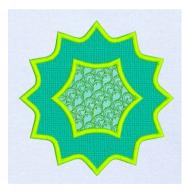

For this effect, create a small Internal Border and a large

External Border. Hence, a small hole is cut from the middle of the overall embroidery shape, like the hole in a donut. This is particularly effective with lightly stitched fill effects created using Object editing features, or in PREMIER+<sup>™</sup> 2 Create.

# Double Layer Appliqué

Use this to create double layers of appliqué fabric using a smaller inner appliqué shape over a large outer appliqué shape. Draw the inner appliqué shape first. This can be created with any of the appliqué options to give different effects. Then create the outer appliqué shape, usually as External Border with appliqué. When stitching out, the larger piece of appliqué fabric is stitched down first and trimmed, and then the inner piece is placed over it.

# Stamps on a Thick Border

This is ideal for adding text and simple stamps, while also framing an embroidery. Use a wide External Border, that is 8 to 10mm wide. Then use the text stamping (here Segoe Script, Regular 144) found on the Emboss tab to create writing on the border. Use other stamps and Freehand Tablet/ Point Emboss Line for additional decoration.

# Colors

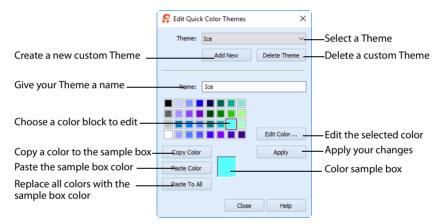

Use the Quick Colors palette to select the nearest matching color in the current range to the color that you pick. Use one of the theme palettes: Standard, Spring, Summer, Fall, Winter, or create your own palette.

Quick Colors

Quick Colors are used for thread colors, Felting Needle colors, and appliqué fabric colors.

# **Quick Color Themes**

Use Quick Color Themes for quick selection of colors using a related set of colors. Create your own Quick Color Themes, which are available for selecting thread colors in the Color Selection dialog box in most PREMIER+<sup>™</sup> 2 Embroidery System modules. Also use Quick Color Themes to set fabric colors in the Appliqué Selection dialog box.

# Select a Quick Color

- 1 Open a dialog box with the Quick Colors area, such as the Color Selection box.
- 2 Click the drop-down menu to the right of the Quick Colors to choose a Quick Color Theme. In this menu you can also select Edit Themes to create a new theme, or edit a Custom theme.
- Click the desired Quick Color. The nearest shade that is available from the current range will be selected.
   This is also a quick way to jump to threads or fabrics of that color (for example, click light yellow in the Standard Theme to jump to light yellow shades).

# Add a Quick Color Theme

You can add or customize your own Quick Colors themes in the Color Selection or the Appliqué Selection dialog box in most PREMIER+<sup>™</sup> 2 Embroidery System modules.

- 1 Open a dialog box with the Quick Colors area, such as the Color Selection box.
- 2 Click the drop-down menu to the right of the Quick Colors and select Edit Themes... The Edit Quick Color Themes dialog box opens.
  - Note that if one of the system Themes is selected, the editing options will be unavailable (grayed out).
- 3 Select a Theme from the drop-down menu at the top. Your new Theme will be based on the colors in this theme.
- 4 Click the Add New button. A new theme 'Untitled' appears.
- 5 Give your new theme a name, then click Apply. You can now select your new theme from the drop-down list at the top.
- 6 Select a color in the palette.
- 7 Click the Edit Color button. The Colors dialog box appears. See "Colors Dialog Box" on page 120.
- 8 Choose a new color from the Standard or Custom tab, then click OK. Your chosen color will replace the original color.
- 9 To copy a color, select a color in the palette, then click Copy Color. Your selected color will appear in the Color Box.
- **10** To paste the color in the Color Box, select a color in the palette, then click Paste Color. The color in the palette will be replaced.
- 11 To replace all colors in the palette, click Paste To All.
- **12** Click Apply to save the changes to your new Quick Color Theme.
- 13 Click Close to finish editing your new Theme. To make further edits to your theme, select Edit Themes in the Quick Colors Theme menu.

### **Edit Quick Color Themes**

#### Theme

Select a Theme from the drop-down list.

Any new Theme will be based on the colors in this theme.

#### Add New

Click Add New to create a new theme.

#### **Delete Theme**

Click Delete Theme to remove a custom Theme.

You cannot delete system Themes.

#### Name

Enter the desired theme name.

#### **Theme Colors**

Click a color in the grid and a box will appear around the selected color.

#### Edit Color

Click Edit Color to change the currently selected color in the Colors Dialog Box. Alternatively, double-click a color to change it in the Colors Dialog Box.

#### Apply

Click Apply to save the changes you have made.

#### Copy Color

Click Copy Color to place the color in the color sample box, to the right of the button.

Use the color sample box to copy a color from one theme to another.

#### Paste Color

Click Paste Color to replace the color in the currently selected grid position with the color in the sample box.

#### Paste To All

Click Paste To All to place the color in the sample box in all the grid positions. This is useful when starting a new Theme if you wish to vary the Theme around a single initial color.

#### Close

Click Close to finish editing the new theme. The new theme is added to the end of the Theme list.

You will be asked if you want to save any changes you have made, if you have not clicked Apply.

# Change a Quick Color Theme

Select an existing Quick Color Theme you wish to change from the Theme drop-down list, then click Edit Theme.

The predefined Quick Color Themes may not be edited. However, you may use any predefined theme as the basis for a new theme.

The options are the same as when you Add a Quick Color Theme. See "Edit Quick Color Themes" on page 118.

# Delete a Quick Color Theme

- 1 In the Edit Quick Color Themes dialog box, use the Theme drop-down list to select the Theme you wish to remove.
- 2 Click Delete Theme. A message will appear to remind you that this action may not be reversed.
- 3 Click Yes and the theme will be deleted. The predefined Quick Color Themes may not be deleted.

# **Colors Dialog Box**

The Colors dialog box is used to choose or change a color for a thread or fabric, or modify any color in a Quick Colors Custom theme.

When the Colors dialog box appears, it shows the Standard color selection. If desired, click one of the Standard colors. A highlight shows the selected color. The New/Current box shows the difference between the newly chosen color and the color currently used.

Click the Custom tab to be able to select any of the 16 million RGB colors.

Click in the blended color palette to choose a basic color, then use the slider at the side to choose the desired brightness level. The HSL and RGB values are updated as you change the color and the color is previewed in the New/Current box.

You can also directly enter Hue, Sat(uration), Lum(inance) (HSL) and/or Red, Green, Blue (RGB) values. Alternatively, use the up/down buttons on each of the HSL and RGB value boxes to make fine adjustments to the color.

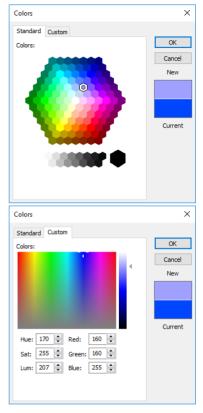

# Color Models

#### Hue, Saturation, Luminance (HSL) Color Model

Hue is the color (red, yellow, green, or blue) for the selected color, expressed as a value between 0 and 239. Saturation (Sat) is the strength or purity of color in a specified hue. This is related to the amount of gray in it and is measured from 0 (completely gray) up to a maximum of 240 (no gray). The higher the saturation, the purer or more vivid the color. Luminosity (Lum) is the intensity of lightness or darkness in a color, specified by a value between 0 (black) and 240 (white). If Saturation is 0, the Luminosity setting specifies a shade of gray.

#### Red, Green, Blue (RGB) Color Model

The RGB model, one of the Additive Color models, is used on computer monitors. It has three primary colors — red, green, and blue — that it creates by emitting light. These three colors are combined in various proportions to produce all the colors displayed on your screen. They are referred to as additive because they combine to produce white.

Primary colors are measured as a value from 0-255. The colors produced by combining the three primaries are a result of the amount of each of those shades present. For example, pure red has a red value of 255, a green value of 0, and a blue value of 0. Yellow has a red value of 255, a green value of 255, and a blue value of 0. If Red, Green and Blue are set to zero, the color is black; if all three are 255, they produce white.

# Morphing and Cutwork

# **Point Morphing**

The point morphing effects change the positions of stitches around the point where you click. You do not need to click directly on stitches in order to affect them.

The effect is strongest at the point clicked and gets weaker with distance. Only visible stitches are affected.

### Magnet

Use Magnet 🗞 to pull stitches in towards the point where you click.

Click Magnet, then click the required points on the embroidery to morph stitches around those points. Right-click to deselect.

#### Shortcuts

- Morphing, Modify Tab: 🗞
- Keys: Alt, M, MA

### Polarize

Use Polarize 💯 to push stitches away from the point where you click. This does not reverse the effects of a previously applied Magnet.

Click Polarize, then click the required points on the embroidery to morph stitches around those points. Right-click to deselect.

Shortcuts

- Morphing, Modify Tab: *j*
- Keys: Alt, M, P

#### Twirl

Use Twirl  $\sim$  to move stitches around the point where you click, like a swirling spiral. Twirl moves the stitches clockwise around the click point, or hold Shift and click for a counter-clockwise Twirl.

Click Twirl, then click or shift-click the required points on the embroidery to morph stitches around those points. Right-click to deselect.

Shortcuts

- Morphing, Modify Tab:
- Keys: Alt, M, TW

#### Wave

Use Wave  $\approx$  to move stitches in a wave pattern around the point where you click. The effect of Wave is usually clearest on straight lines of stitch points.

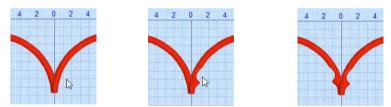

Click Wave, then click the required points on the embroidery to morph stitches around those points. Right-click to deselect.

### Twirl the Border of a Heart Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 Click Change Hoop ①. From the Universal Hoop Group, set the Hoop Size to 240mm x 150mm Universal Large Hoop 2. Set the Orientation to Rotated. Click OK.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Lace Heart' embroidery. Alternatively, you could use the embroidery you created in "Cut a Heart Border Shape from Lace" on page 83.
- 5 In the color worksheet on the Design Panel, click the check box for the first color to hide the thread color for the lace. This ensures the lace will not be affected by the Twirl function.
- 6 Click the Modify tab.
- 7 In the Morphing area, click the Twirl 🔁 icon.
- 8 Starting from the central top point of the heart, move the mouse pointer along the inside of the border, about two grid squares up and to the right. See the pictures below for more details.
- 9 Hold down the Shift key on the keyboard. Click once and the border next to the pointer will be twirled into a scallop-like shape. Release the Shift key on the keyboard.
- 10 Move the pointer horizontally across, so that it is just inside the border on the left, opposite the twirl that you placed on the right.
- 11 Click once and the border will be twirled into a scallop-like shape on the left side. However, the scallop is created in the opposite direction.

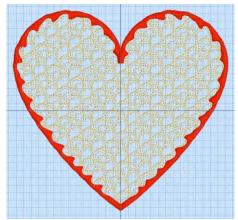

When you click, the stitches are twirled clockwise. When you hold down Shift and click, the stitches are twirled counter-clockwise. Twirl is the only morphing function that is affected by holding down the Shift key.

- 12 Hold down the Shift key. On the right side of the inside of the heart, move the pointer about two grid squares up and around the inside of the border from the first scallop and click again.
- 13 Keep the Shift key held down, and continue to click around the inside of the right half of the heart border.

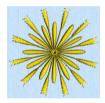

It is not important to twirl as frequently as in the example, as this is for practice with using the Twirl function. However, try to space the twirls evenly.

- 14 Click to place the last twirl a few grid squares from the point at the bottom of the heart, then release the Shift key. If you wish to undo a Twirl you have just made, click Undo and try again.
- **15** On the left side of the heart, move the pointer about two grid squares around the inside of the border from the first scallop and click. Continue to click around the inside of the left half of the heart border.
- 16 Click to place the last twirl a few grid squares from the point at the bottom of the heart.
- 17 Right-click to deselect the function.
- 18 Click Draw All Stitches

# **Global Morphing**

Use Global Morphing 👐 to move all the visible stitches to change the shape and size of the embroidery. Choose any of the following global effects:

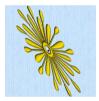

Pinch Pinch the stitches together in the center, while pulling the outer stitches away from each other

Ripple Apply a wave pattern radiating from the center, like dropping a stone into a pond.

Skew Horizontal Slant the stitches horizontally to the left or right.

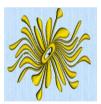

Skew Vertical Slant the stitches vertically up or down.

Spherize Stretch the stitches around an imaginary sphere.

Twirl Twist the stitches around the center, creating a swirling effect like a whirlpool

Wave Horizontal Move the stitches to follow a horizontal wave pattern.

Wave Vertical Move the stitches to follow a vertical wave pattern

Depending on the Morphing effect selected, move one or two slider bars, or type in a number, to adjust the intensity or height and frequency for the effect. The Before and After boxes show the original stitches and a preview of the effect.

All visible stitches are morphed by the chosen effect. Global Morphing may not be used when a block of stitches is selected.

Global Morphing effects are generally more pleasing when applied to an embroidery that is mainly or completely symmetrical.

The last effect used and the last settings for each effect are remembered for the current PREMIER+<sup>™</sup> 2 Modify session.

This function works on the entire visible area. Hide colors and use Draw Range to isolate an area of the embroidery if you do not wish to affect the whole embroidery.

Shortcuts

- Morphing, Modify Tab: w
- Keys: Alt, M, G

# Zoom Controls

Use the Zoom Controls to zoom in and out, zoom to fit and show the Before and After views at Real Size. The preview changes in real time when you adjust the settings.

#### Zoom In

Use Zoom In 🔁 to enlarge the view of an area of the Before and After views.

Click Zoom In O and move the pointer over the Before or After view. The mouse pointer changes to the zoom in pointer O. Then either click a point on the view you want to zoom in towards, or click and drag a rectangle around the area you want to zoom in to and release the mouse button to zoom.

When zoomed in, use the scroll bars to move around the Before and After views.

#### Zoom Out

Use Zoom Out *Q* to zoom out of the Before and After views, to show more of the embroidery in each view.

Click Zoom Out  $\bigcirc$  and move the pointer over the Before or After view. The mouse pointer changes to the zoom out pointer  $\bigcirc$ . Then click a point on the Before or After view you want to zoom out from.

#### Zoom To Fit

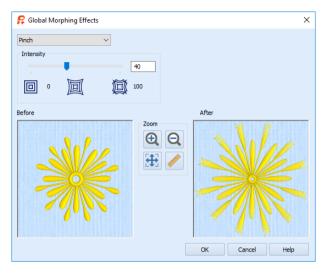

Click Zoom To Fit 🔠 to view all of the stitches in the Before and After views.

#### Real Size

Click Real Size *V* to show the Before and After views at the Real Size selected in PREMIER+<sup>™</sup> 2 Configure.

# Pinch

Pinch the stitches together in the center, while pulling the outer stitches away from each other.

#### Intensity

Adjust the Intensity from 0 to 100. The higher the number, the more the stitches are Pinched.

#### Morph a Flower with Pinch

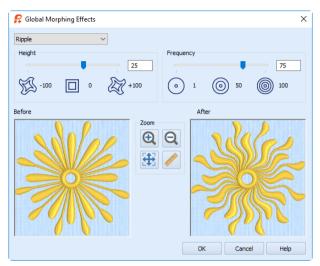

- 1 Click File, New T to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Pinch.
- 7 Click and drag the Intensity slider bar to 40. The Before and After boxes show the original stitches and a preview of the effect.

Alternatively, click in the Intensity box and enter a number. You can set Intensity between 0 and 100.

8 Click OK and the visible stitches will be pinched.

# Ripple

Apply a wave pattern radiating from the center of the visible stitches, like dropping a stone in a pond.

#### Height

Adjust the Height from -100 to +100. The higher the number, the larger the size of the ripples. Negative values reverse the peaks and troughs of the waves.

#### Frequency

Adjust the Frequency from 1 to 100. This changes the number of ripples radiating from the center.

# Morph a Flower with Ripple

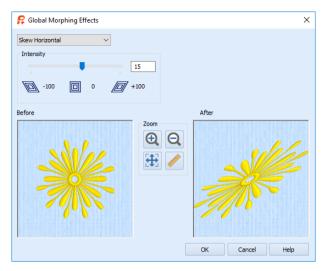

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Ripple.
- 7 Click and drag the Height slider bar to 25. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Height box. You can set the Height between -100 and +100.
- 8 Click and drag the Frequency slider bar to 75. The After preview will be updated as you move the slider bar.

You can set the Frequency between 1 and 100.

9 Click OK and the flower will be morphed.

# **Skew Horizontal**

Slant the stitches horizontally to the left or right.

#### Intensity

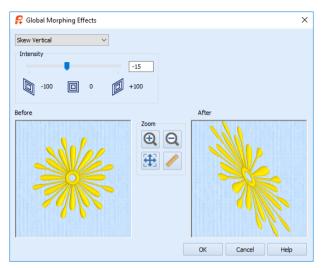

Adjust the Intensity from -100 to +100. The higher the number, the greater the slant. Negative values slant the stitches to the left and positive values slant the stitches to the right.

#### Morph a Flower with Skew Horizontal

- 1 Click File, New 👕 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Skew Horizontal.
- 7 Click and drag the Intensity slider bar to 15. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Intensity box. You can set the Intensity between -100 and +100.
- 8 Click OK and the flower will be morphed.

# **Skew Vertical**

Slant the stitches vertically up or down.

#### Intensity

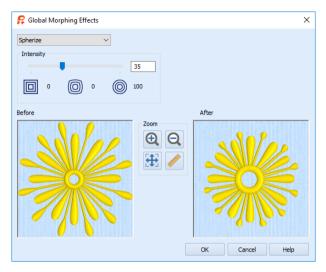

Adjust the Intensity from -100 to +100. The higher the number, the greater the slant. Negative values slant the stitches down and positive values slant the stitches up.

#### Morph a Flower with Skew Vertical

- 1 Click File, New 👕 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Skew Vertical.
- 7 Click and drag the Intensity slider bar to -15. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Intensity box. You can set the Intensity between -100 and +100.
- 8 Click OK and the flower will be morphed.

# Spherize

Stretch the stitches around an imaginary sphere.

#### Intensity

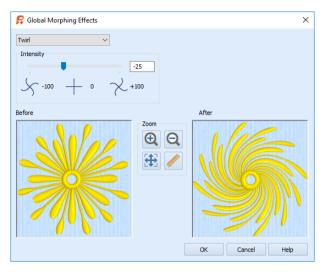

Adjust the Intensity from 0 to 100. The higher the number, the more rounded the stitches become.

#### Morph a Flower with Spherize

- 1 Click File, New T to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Spherize.
- 7 Click and drag the Intensity slider bar to 35. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Intensity box. You can set the Intensity between 0 and 100.
- 8 Click OK and the flower will be rounded.

# Twirl

Twist the stitches around the center of the visible stitches, creating a swirling effect like a whirlpool.

#### Intensity

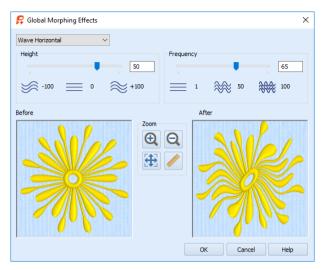

Adjust the Intensity from -100 to +100. The higher the number, the more extreme the swirling effect. Negative values twirl the stitches counter-clockwise, while positive values twirl the stitches clockwise.

#### Morph a Flower with Twirl

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing → and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Twirl.
- 7 Click and drag the Intensity slider bar to -25. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Intensity box. You can set the Intensity between -100 and +100.
- 8 Click OK and the flower will be twirled.

# Wave Horizontal

Move the stitches to follow a horizontal wave pattern.

#### Height

Adjust the Height from -100 to +100. The higher the number, the larger the size of the waves. Negative values reverse the peaks and troughs of the waves.

#### Frequency

Adjust the Frequency from 1 to 100. This changes the number of waves across the stitches.

#### Morph a Flower with Wave Horizontal

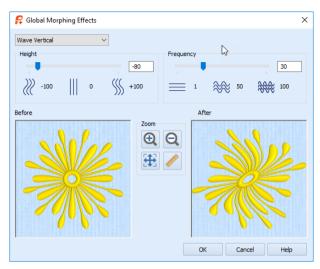

- 1 Click File, New 👕 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Wave Horizontal.
- 7 Click and drag the Height slider bar to 50. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Height box. You can set the Height between -100 and +100.
- 8 Click and drag the Frequency slider bar to 65. The After preview will be updated as you move the slider bar.

You can set the Frequency between 1 and 100.

9 Click OK and the flower will be morphed.

# Wave Vertical

Move the stitches to follow a vertical wave pattern.

#### Height

Adjust the Height from -100 to +100. The higher the number, the larger the size of the waves. Negative values reverse the peaks and troughs of the waves.

#### Frequency

Adjust the Frequency from 1 to 100. This changes the number of waves across the stitches.

#### Morph a Flower with Wave Vertical

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Yellow Twist' embroidery.
- 4 Click the Modify tab.
- 5 Click Global Morphing 👐 and the Global Morphing Effects dialog box will appear.
- 6 At the top left of the screen, click the drop-down arrow to the right of the currently selected effect and select Wave Vertical.
- 7 Click and drag the Height slider bar to -80. The After preview will be updated as you move the slider bar. Alternatively, enter the number in the Height box. You can set the Height between -100 and +100.
- 8 Click and drag the Frequency slider bar to 30. The After preview will be updated as you move the slider bar.

You can set the Frequency between 1 and 100.

9 Click OK and the flower will be morphed.

# Add Cutwork Needle Lines

Use the Cutwork IS features to draw a cutwork needle line within your design, optimized for the INSPIRA<sup>™</sup> Cutwork Needle Kit. There are two cutwork options:

- Freehand Tablet Cutwork Line *Ø*
- Freehand Point Cutwork Line 5

Use cutwork needle lines for reverse appliqué embroideries and free-standing lace, or simply to cut out a shape or design.

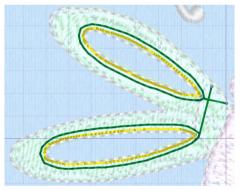

#### About Cutwork Needle Lines

The stitch points for cutwork needle lines are very close together (0.3mm).

Where two cutwork needles are used, the two lines are represented by the colors red and yellow. Where four needles are used, the four lines are red, yellow, green and blue. The gaps in these lines represent the secure points.

Surrounding the cutwork lines are the more widely spaced points for the stabilizing line. (As the points for the cutwork lines are placed on top of each other, you cannot see the separate lines.)

Use the Move and Merge functions for Color Blocks when changing the order of designs with multiple areas of cutwork and stabilizing lines, as ColorSort may occasionally merge stabilizing lines in these circumstances.

# Freehand Tablet Cutwork Line

Use Freehand Tablet Cutwork Line *to* draw a line to be cut using cutwork needles. Create two or four needle lines automatically, with secure points and stabilizing lines according to the settings in Cutwork options.

Draw a line, then release the mouse button to finish the line. The line is closed automatically to form a shape. Move the nodes to adjust the line. Click Delete to remove the last-placed point. Right-click to place the line on the work area.

If the desired line is not achieved when created initially, either redo the line or select and move the nodes as desired.

Shortcuts

- Cutwork, Modify Tab: *Ø*
- Keys: Alt, M, CL, FT

### Create a Freehand Tablet Cutwork Line

- 1 In the Quick Access toolbar, click Insert 🛐 and open a design.
- 2 Open the Modify tab.
- 3 In the Cutwork Line ∬ menu, click Freehand Tablet Cutwork Line **2**. The pointer changes to the draw pointer *𝗞*.
- 4 Draw a line on the work area, then release the mouse button. When you release the mouse button the line is drawn as a closed line (a loop) with nodes.
- 5 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer R<sub>B</sub>. Adjust the node as desired. Use Ctrl+click to change a round node to a square node, to make the line straight. Click Delete to remove the last–placed point.
- 6 Right-click to deselect Freehand Tablet Cutwork Line. The cutwork line is placed on the work area. The points for the cutwork needle and stabilizing lines are inserted automatically, along the line that you drew.

# Freehand Point Cutwork Line

Use Freehand Point Cutwork Line *s* to place points to define a line to be cut using cutwork needles. Create two or four needle lines automatically, with secure points and stabilizing lines according to the selected Cutwork options.

Click to insert points for the line, then adjust the nodes as desired, or place more points. Click Delete to remove the last-placed point. Right-click to place the line on the work area.

If the desired line is not achieved when created initially, either redo the line or select and move the group area of stitch points you wish to change.

#### Shortcuts

- Cutwork, Modify Tab: 5
- Keys: Alt, M, CL, FP

#### Create a Freehand Point Cutwork Line

- 1 In the Quick Access toolbar, click Insert <u>5</u> and open a design.
- 2 Open the Modify tab.
- 3 In the Cutwork Line 5 menu, click Freehand Point Cutwork Line 5. The pointer changes to the Freehand Point pointer  $k_0$ .
- 4 Click to place a series of points for the line. As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself.

The line may 'swing' while you place points. Just carry on, you can adjust it afterwards.

5 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer k<sub>B</sub>. Adjust the node as desired.

When the  $\overline{M}$  ove Node pointer is active you can adjust existing nodes.

Use Ctrl+click to change a node to a square node for a straight line.

If you click while the Freehand Point pointer  $k_0$  is active, another point will be added to the line. Click Delete to remove the last–placed point.

6 Right-click to deselect Freehand Point Cutwork Line. The cutwork line is placed on the work area.

The points for the cutwork needle and stabilizing lines are inserted automatically, along the line that you placed.

# **Cutwork Options**

The cutwork needle features allow you to draw a cutting line within a design, optimized for the INSPIRA<sup>™</sup> Cutwork Needles. Use two or four cutwork needles, add secure points for fabric stability, and add a stabilizing line.

OK	Cancel Help

# Method

Choose between:

- 2 Cutwork Needles
- 4 Cutwork Needles

Choose between 2 Cutwork Needles and 4 Cutwork Needles.

By default 2 needles is selected.

With 2 needles, a bladed needle set at one angle is used to cut around the shape, and then the second needle travels around the shape cutting at a different angle.

With 4 needles a more precise cutting method is used, where each needle is used for the section of the shape that closely matches its angle. This method is recommended for more delicate fabrics.

# Cutwork Line

#### **Include Secure Points**

Select Include Secure Points to create gaps in the cutwork needle line. By default Include Secure Points is selected.

This allows the cut fabric to remain attached for stability while all the cutwork needle lines are created. Afterwards it can be easily trimmed with scissors.

#### **Distance Between Secure Points**

Set the Distance Between Secure Points from 10mm to 100mm in steps of 1mm. The initial setting is 30mm.

# Stabilizing Line

Insert a stabilizing line of stitching before and/or after the cutwork line. This may be helpful for reverse appliqué or free-standing lace, but is not required if you are simply cutting out a shape.

Before Cutwork Line By default Before Cutwork Line is selected.

After Cutwork Line By default After Cutwork Line is selected.

Stitch Length

Set the Stitch Length from 1.0 to 6.0mm in 0.1mm steps. The default setting is 2mm.

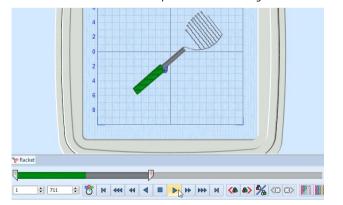

#### Distance from Cutwork Line

Set the distance of the stabilizing line from the cutwork line from 0.1 to 10.0mm in 0.1mm steps. The default setting is 1.0mm.

### **Cutwork Racket**

- 1 Click File, New 🛅 to open a new window.
- In the Quick Access toolbar, click Change Hoop O.
- 3 In the Universal Hoop Group, set the Hoop Size to 100mm x 100mm -Universal Standard Hoop 1. Click OK.
- 4 In the Quick Access toolbar, click Insert <u>5</u>.
- 5 In the folder Documents\Premier+2\Samples\Modify\Stitch, open the embroidery Racket.vp4.
- 6 Look at the Color Select area of the Control Panel. There are two thread colors in the worksheet.
- 7 In the Control Strip, click Start ➡ , and then click Play ► to use the Stitch Player to play through the embroidery as if it was being

stitched. The handle and shaft of the racket are stitched out before the strings and head. This will enable a cutwork line to be placed before the strings and head.

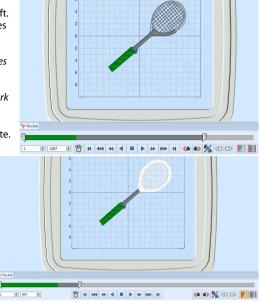

- 8 Click Draw All Stitches .
- 9 Slowly move the slider for the End to the left. As you move the slider, some of the stitches forming the head of the racket and the strings are hidden.

The Draw Range enables you to insert stitches (or in this case a cutwork line) into a design. However, to work accurately you need to be able to see where the stitches after the cutwork line will be placed.

- 10 Click Ghost Mode . The stitches that were hidden are now white.
- 11 Move the End slider to the left to where the stitches move into the strings for the racket, approximately stitch number 504. If needed, click the arrows on the number boxes below the slider bar to show or hide stitches one at a time. This is where the cutwork line will be inserted.

Stitch numbers are given as guides only. It is more important to ensure that the correct stitches are hidden or left showing than to follow the exact stitch numbers.

- 12 Click the Modify tab.
- 13 In the Cutwork area, click the Options button. The Cutwork dialog box appears.
- 14 In Method, ensure that 2 Cutwork Needles is selected.

With 2 needles, a bladed needle set at one angle is used to cut around the shape, and then the second needle travels around the shape cutting at a different angle.

4 Cutwork Needles is a little more precise, and is recommended for delicate fabrics, but takes longer to complete the cutwork process. In this design the cutwork line will be covered by a satin border, therefore it is not necessary to use four needles.

- 15 In Cutwork Line ensure that Include Secure Points is selected (checked), and that Distance Between Secure Points is set to 30mm. Secure Points prevent the fabric from lifting up while it is being cut. The secure points are trimmed away, and the fabric removed, after the cutwork line has been completed, and before washable stabilizer (or reverse appliqué fabric) is placed.
- **16** In Stabilizing Line ensure that both Before Cutwork Line and After Cutwork Line are selected (checked).
- 17 Ensure that Stitch Length is set to 1.5mm, and set Distance from Cutwork Line to 1.0mm. The line cut through the fabric may have a sharper edge if a stabilizing line of stitching is placed before the cutwork line. This can prevent the fabric from shifting when the cutting needle moves in and out.

	×
Method © 2 Cutwork Needles © 4 Cutwork Needles	
Cutwork Line Include Secure Points Distance Between Secure Points	30 mm ≑
Stabilizing Line           Ø         Before Cutwork Line           Ø         After Cutwork Line	
Stitch Length Distance from Cutwork Line	1.5 mm 🔶
ОК	Cancel Help

A stabilizing line placed after the cutwork line may also add security. Stabilizing lines may not always be suitable when embroidering on delicate fabrics, or if you are simply cutting out a shape.

- 18 Click OK to close the Cutwork dialog box.
- 19 Click the View tab, then click 2D View with Stitch Points 2D. The individual stitches are now visible.
- 20 Click Zoom to Rectangle 强. The pointer changes to the zoom pointer 🕄 .
- 21 Click and drag to draw a rectangle around the racket head, then release the mouse button to zoom in.
- 22 Click the Modify tab.
- In the Cutwork Line menu, click Freehand Point Cutwork Line . The pointer changes to the Freehand Point pointer ointer .
- 24 Click to place points around the inside edge of the racket head, a short distance from the edge of the satin stitch. As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself. The line may 'swing' while you place points. Continue, and you can adjust it afterwards if required.
- **25** Place points until you are near to your starting point, then right-click to finish.

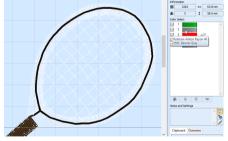

The points for the cutwork needle lines and the stabilizing lines are inserted automatically.

The stitch points for the cutwork lines are very close together (0.3mm).

The gaps in this line represent the secure points.

Surrounding this cutwork lines are the more widely spaced points for the two stabilizing lines. (As the points for the two cutwork lines and the two stabilizing lines are placed on top of each other, you cannot see the separate lines.)

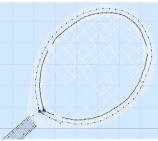

- 26 Look at the Control Panel. There are now five thread colors in the color worksheet. The gray for the racket shaft and head is now in two parts, with the bright red and yellow for the Inspira Cutwork needles in between.
- 27 Ensure that Ghost Mode 🚩 is still selected.
- 28 Move the End (right) slider on the Draw Range to the beginning of the racket head stitching, approximately stitch number 504. This will enable you to distinguish between the thread colors more clearly.
- 29 Hover the mouse pointer over the first gray thread in the Color Worksheet. The thread in the embroidery is highlighted, and a tooltip displays the name of the thread (Robison-Anton Rayon 40, 2585 Banner Gray). *As well as the gray stitching in the racket shaft, a*

ring of stitching around the head of the racket is highlighted. This is the first stabilizing line. Hover the mouse pointer over the colors below, in turn.

The bright red is the cutwork line for Inspira Cutwork Needle 1, and the bright yellow is for Inspira Cutwork Needle 2. The satin of the racket head uses Banner Gray.

30

- 31 Click Save As 🔣 and the Save As dialog box will appear.
- 32 In the Save As Type box, ensure .vp4 is selected. Browse to the folder Documents\Premier+2\MyDesigns. In the File Name box, change the name to 'RacketCutwork', then click Save. The preferred file format for saving embroideries is .vp4, as this will preserve background and appliqué information, thread color information and notes.

When inserting washable stabilizer (or appliqué fabric), insert it after needle color 2 - red, and before the second stabilizing line. The stitch line will then hold the stabilizer or fabric in place. When the racket embroidery has been stitched out, wash the fabric to remove the washable stabilizer that the racket strings were stitched on.

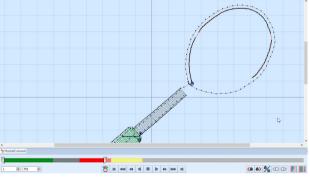

### View the Stitching Order in Detail

- 33 Click Draw All Stitches .
- 34 Click Ghost Mode 🚩 so it is no longer selected.
- 35 Move the slider on the Zoom Bar to zoom out until you can see the top of the green for the racket handle.
- 36 Move the End (right) slider on the Draw Range to the beginning of the racket shaft stitching, approximately stitch number 374.
- 37 Slowly move the End slider on the Draw Range to the right. The shaft of the racket is drawn.
- 38 Move the slider further to the right. A circle is drawn. This is the stabilizing line stitched before the cutwork line is placed.
- 39 Move the slider again to the right. The first circular line is completed, and a second heavier circular line is placed within the first. This is the line for the first cutwork needle (the red in the color worksheet).

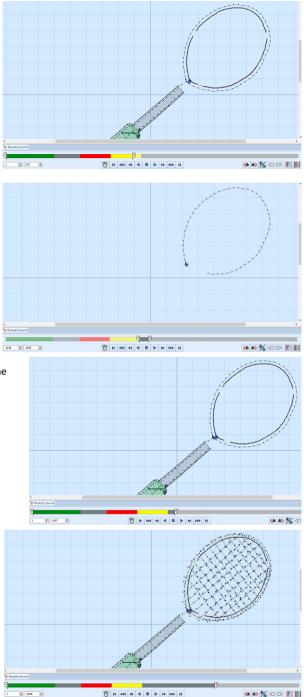

The closely spaced (0.3mm) needle points are shown as a heavy line. The secure points (gaps) are shown as a thin red line.

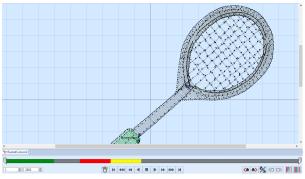

- 40 Move the slider further still to the right. A second cutwork line (the yellow in the color worksheet) is placed directly on top of the first. The best way to detect the added line is that the lines in the *gaps for the secure points* change from red to yellow. You could also see the changes by deselecting (unchecking) the check box next to the red in the color worksheet after drawina the yellow (first) cutwork line. The red cut line will disappear.
- **41** Move the slider to the right to the end of the yellow color in the Control Strip.
- **42** Drag the Start (left) slider to the right to the last of the yellow cutwork line stitches, so that it touches the other slider.
- **43** Now move the End (right) slider to the right again to draw the second stabilizing line.
- 44 Drag the Start (left) slider back to the start point to view all of the stitching and the cutwork lines.

45 Move the End (right) slider to the right. The mesh for the racket strings is displayed.

46 Finally, move the slider the rest of the way, and the satin for the racket head is placed over the stabilizing and cutwork lines.

# Use a Cutwork Line for Dragonfly Wings

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch, open the Perky Dragonfly embroidery to load it.
- 4 On the Home tab, use Box Select 🛄 to select the dragonfly, then click Resize 🏪. The handles on the selection box become blue.
- 5 Click Modify Block C and in the dialog box change the Height and Width to 125%, then click Apply and Close. See "Resize a Dragonfly Embroidery" on page 68 for full instructions, if desired.
- 6 Left-click outside the select box to deselect the stitches.
- 7 In the Stitch Player section of the Control Strip, click Start 
  . The Draw from End handle moves to the far left, and none of the embroidery can be seen.
  The Draw Range enables you to insert the cutwork line into this design, but to work accurately you must be able to see where the stitches after the cutwork line will be placed.
- 8 Click Ghost Mode 🚩 . A pale version of the embroidery can now be seen.
- 9 Click Play ► to play through the embroidery as if it was being stitched. The wings of the dragonfly are stitched out before the body.
- **10** Click Stop when the body is all or partially shown. The stabilizing stitch line and the cutwork line can be placed before the rest of the embroidery.
- In the Control Strip, click Start raggin.
   This enables you to insert the cutwork stitches at the beginning of the embroidery.
- 12 Click the Modify tab.
- 13 In the Cutwork area, click the Options button. The Cutwork dialog box appears.

14 In Method, ensure that 2 Cutwork Needles is selected. With 2 needles, a bladed needle set at one angle is used to cut around the shape, and then the second needle travels around the shape cutting at a different angle.

15 In Cutwork Line ensure that Include Secure Points is selected (checked), and that Distance Between Secure Points is set to 30mm.

Secure Points prevent the fabric from lifting up while it is being cut.

- In Stabilizing Line, ensure that Before Cutwork Line is selected.
  Deselect (uncheck) After Cutwork Line.
  In this design there will be several cutwork areas, and the color blocks for the cutwork lines will be merged. Frequent needle changing would be necessary if there was a stabilizing line after each cutwork line.
- 18 Ensure that Stitch Length is set to 2mm, and set Distance from Cutwork Line to 1.0mm.

The line cut through the fabric may have a sharper edge if a stabilizing line of stitching is placed before the cutwork line. This can prevent the fabric from shifting when the cutting needle moves in and out.

异 Cutwork	×
Method © 2 Cutwork Needles © 4 Cutwork Needles	
Cutwork Line V Indude Secure Points

OK	Cancel Help

- 19 Click OK to close the Cutwork dialog box.
- 20 Click Zoom To Rectangle 🗟. Click and drag to draw a rectangle around the top left wing, then release the mouse button to zoom in.
- 21 In the Cutwork Line  $\int menu, click Freehand Point Cutwork Line <math>5$ . The pointer changes to the Freehand Point pointer  $k_0$ .
- 22 Starting at the base of the 'hole' in the top left wing, click to place a series of points just inside the edge of the satin stitch line. As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself. The line may 'swing' while you place points. Continue, and you can adjust it afterwards if required.
- 23 Click points to complete the line around the edge of the hole.
- 24 Move the pointer over one of the nodes on the line. The pointer changes to the Move Node pointer 战略. Adjust the node as desired.

When the Move Node pointer is active you can adjust existing nodes.

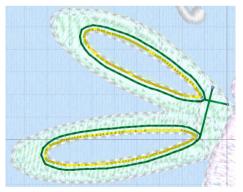

If you click while the Freehand Point pointer  $k_0$  is active, another point will be added to the line.

25 Right-click to place the cutwork line and deselect Freehand Point Cutwork Line. The cutwork line is placed on the work area.

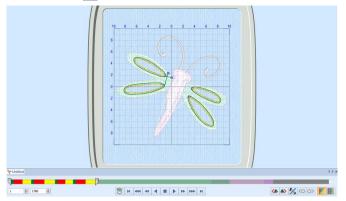

The points for the cutwork needle and stabilizing lines are inserted automatically.

Surrounding the cutwork lines are the more widely spaced points for the stabilizing line. (As the points for the two cutwork lines are placed on top of each other, you cannot see the separate lines.)

- 26 In the Design Panel, click the Overview tab.
- 27 Click and drag in the overview window to position the lower left wing in the center of the screen.
- 28 Click Freehand Point Cutwork Line 5, and starting at the base of the lower left wing, place points around the inner edge of the wing, finishing back where you started.
- 29 Adjust the points as desired, then right-click to place the cutwork line and deselect.

- 30 Click and drag in the overview window to view the top wing on the right.
- 31 Using Freehand Point Cutwork Line *s* and starting at the base of each wing, place points to set cutwork areas for first the upper, and then the lower wing on the right.

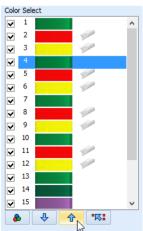

Note that new stitches (bright red and yellow) for the cutwork line, and for the stabilizing line (green) are visible on the colored slider bar in the Control Strip. The handle to the right moved as these stitches were inserted.

The bright red is the cutwork line for Inspira Cutwork Needle1, and the bright yellow is for Inspira Cutwork Needle 2. The green used for the stabilizing line is the green used in the wings. It is now in several places.

- 33 Click the View tab.
- 34 Click 2D View with Stitch Points 20 to go to 2D view, so you can see the individual stitches more clearly.
- **35** Use the slider on the Zoom Bar to zoom in a little.
- 36 Click Draw All Stitches .
- 37 Click Draw Next Color Block (a) once. The stabilizing line for the top left wing is drawn. The green for the stabilizing line is the only selected color in the color worksheet.
- 38 Click Draw Next Color Block a again. The closely spaced (0.3mm) needle points are shown as a heavy line. The secure points (gaps) are shown as a thin red line.
- **39** Click Draw Next Color Block **a** third time.

A second cutwork line (the yellow in the color worksheet) has been placed directly on top of the first. The lines in the gaps for the secure points are now yellow, not red. This may be easier to see if Ghost Mode is temporarily turned off.

- 40 Click Draw Next Color Block 
  a few more times. The same structure is used for the cutwork and stabilizing lines in the other wings.
- 41 Click Zoom To Fit 🔠, and then click Draw All Stitches 🎆.
- 42 Click 3D View <u>30</u> to return to a realistic view of the embroidery.
- 43 In the color worksheet, scroll down the list of color changes. There are now 18, but many of them are the same colors repeated. Change the color order yourself when optimizing the order of designs with multiple areas of cutwork and stabilizing lines. ColorSort may occasionally merge stabilizing lines in these circumstances.
- 44 Click the green color block in position 4.
- 45 Click Move Color Up ☆ twice. What was green block number 4 is now below green block number 1. Alternatively, right-click the color block and select Move Color Up from the context menu.
- 46 Move the green color blocks at numbers 7 and 10 in turn to just below the green block that is now number 2. This places the stabilizing lines for the four wings together at the top of the embroidery.

- 47 Click the red color block in position 7.
- 48 Click Move Color Up 🏠 once. The red block that was number 7 is now below red block number 5.
- 49 Move the red blocks numbers 9 and 11 in turn to just below block number 6 (the block you just moved).
- 50 Click the green color block in position 4.
- 51 Click Merge into Previous Color States 3 times. There is now one green block at the top. Alternatively, right-click the color block and select Merge into Next Color or Merge into Previous Color, as appropriate.

Do not move the green color block that is now in position 10. This is for the outlines of the wings and is stitched after the cutwork is placed.

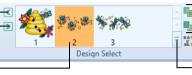

- 52 Click the red color block in position 5.
- 53 Click Merge into Previous Color 🚾 3 times. There is now one red block.
- 54 Click the yellow color block in position 6 and merge the four yellow color blocks. There are now 9 colors in the color worksheet.

# Modifying an Embroidery

# Select, Move and Merge Designs

Use the Design Select area on the Home tab to view the different sections or subdesigns of a multipart design. The selected section is displayed in the work area. You can change the order of the subdesigns, and select designs to merge together.

Move design up or down the stitch order Merge design with the one above View all subdesigns

Click to select a design -

Automatic Ghost Mode is used to show the position of the other parts of the design in the work area. To see all subdesigns, click the arrow at the bottom right of the Design Select area.

Use Merge Design if you are confident you will not wish to move the subdesigns separately, and if there are few or no overlapping stitches.

Decoration subdesigns cannot be merged with others. Alignment subdesigns cannot be moved from the beginning of the design or merged with others unless they are changed to standard stitches using the Alignment  $\square$  function.

To remove overlapping stitches when combining designs (unless any of the designs contain appliqué), use Export with the Combine and Remove Overlap option checked. See "Export" on page 18.

### Move and Merge Designs

- 1 In the Quick Access toolbar, click Change Hoop , and ensure that the hoop is set to 240mm x 150mm Universal Large Hoop 2, and that Rotated is selected in Orientation. Click OK.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 In the folder Documents\Premier+2\Samples\Premier+2Emb\Stitch2\Butterflies and Bugs, insert the following embroideries in this order: 'Floral Beehive', 'Three Bees' and 'Three Dragonflies'. The embroideries are loaded into the center of the work area.

The embroideries will be shown in the Design Select area in the order that you loaded them. This is also the stitching order.

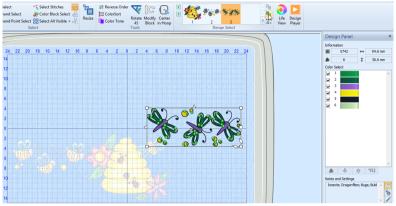

- 5 In the Design Select area, click the beehive. The dragonflies and bees are shown in automatic ghost mode.
- 6 Click Select All Visible 🔡. The beehive is surrounded by a selection box.
- 7 Drag the beehive embroidery to the bottom of the hoop.
- 8 In the Design Select area, click Next Design 🔊. The three bees are selected.

Click a design in the Design Select area to select it, or use Previous Design  $\leq$  and Next Design  $\triangleright$ , or the Tab key, to browse through the sections of a multipart design.

- 9 Click Select All Visible 🔡. The bees are surrounded by a selection box.
- 10 Drag the bees down and to the left of the hoop, so that the antennae of the bee on the right overlap the red and yellow flower by the hive.
- 11 Select the dragonflies, as above, and drag them to the right so that the yellow bubbles underneath the dragonfly on the left overlap the wings of the bee to the right of the beehive.
- 12 Click Life View 🗿. This shows the whole project as it will be stitched out.

The hive was loaded first, so it is stitched out before the bees and dragonflies. This works well for the overlapping antennae on the left, but on the right it would be better if the bee by the hive was placed over the yellow bubbles.

- 13 Click Cancel to close Life View.
- 14 In the Design Select area, click the dragonflies.
- 15 Click the Move Backwards icon 惧 to the right of the Design Select area twice to move the dragonflies to the top of the stitching order.

The dragonflies are now above the hive in the Design Select area, and will be stitched out first.

Use Move Forwards 📹 to move a design down the stitching order. Alternatively, right-click the design in the Design Select area, and choose Move Forwards or Move Backwards from the context menu.

16 In the Design Select area, click the bees to make them the active subdesign, then click Combine with Previous . The bee and hive designs are merged, and are both now fully visible in the work area. Alternatively, you could right-click the beehive in the Design Select area and choose Combine with Previous from the context menu.

### **Previous Design**

Use Previous Design < to select the previous design in the stitchout order.

### **Combine with Previous**

Use Combine with Previous 🐩 to merge the design with the previous design in the stitchout order.

#### Shortcuts

- Design Select, Home Tab: <a>the select</a>
- Keys: Alt, H, CW

# **Compensate Stitches**

Use Compensate Stitches 😫 to make a stitch block appear 'bolder' by increasing the relative size of the stitches by a factor of 1 to 15. Stitch lengths are increased at the edges of areas by the compensation factor. Only visible stitches are affected.

Compensation allows for the effects of stitches' tendency to pull in, which varies according to fabric weight and type. A common use is to 'thicken up' lettering in an embroidery when it is being embroidered on knitwear, as lettering tends to have thinner columns relative to the rest of the embroidery.

#### Shortcuts

- Modify Design, Modify Tab:
- Keys: Alt, M, CS

### Using Compensate Stitches

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>57</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Racket' embroidery.
- 4 Click the Modify tab.
- 5 In the Modify Design area, click Compensate Stitches 🛱 . The Compensate Stitches dialog opens.
- 6 If the dialog covers the racket embroidery, move it to one side.

🔗 Compensate Stitches	×
Compensation Value 💈 🖨	ОК
	Cancel
	Help

- 7 Enter 15 in the Compensate Stitches dialog box.
- 8 Click OK. Compensation thickens the handle and the edge of the racket head. Compensate Stitches works on the entire visible area. Hide colors and use Draw Range to isolate an area of the embroidery if you do not wish to affect the whole embroidery.

# **Break Up Stitches**

Use Break Up Stitches 📰 to add extra stitch points to the embroidery so that no stitches are longer than the specified maximum length. This is useful to reduce the length of stitches if they are causing any difficulties during embroidery, however it does increase the number of stitches in the embroidery. Only visible stitches are affected.

It is recommended to use Break Up Stitches if some very long stitches are left when the Remove Needle Points in Fill function is used before stamping. If these long stitches are not broken up, they may be too loose when the embroidery is stitched out.

Set the maximum length of visible stitches in the current embroidery to between 2mm and 12mm. The initial setting is 8mm. Change the Length in steps of 0.1mm.

Use the Extreme setting to break up stitches that are hidden in 3D but visible in 2D. The Extreme setting is off by default and reset when the module is restarted again.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

#### Shortcuts

- Modify Design, Modify Tab: 🧱
- Keys: Alt, M, BU

### **Using Break Up Stitches**

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Girl with Rose' embroidery.
- 4 In the Control Strip, click Draw Next Color Block 
  once so that the background color behind the girl's head is shown.
- 5 Click the Emboss tab.
- 6 Click Remove Needle Points in Fill 🟪. The stitches making the flat fill pattern are removed.
- 7 In Stamps in the Category drop-down menu, select Games, then select stamp 11, a heart.
- 8 Click Single Stamp 1, then click on the background area to place stamps in a few locations where a full stamp can be fitted.
- 9 Click the Modify tab.
- 10 Click Break Up Stitches 🧱 .
- 11 Enter the desired Length in the Break Up Stitches dialog box. 8mm is a good length to maintain the patterns that have been stamped, but removing long, loose stitches.
- 12 Click OK to break up the stitches. Extra stitch points are inserted on the areas with stitches longer than your selected length.

🔑 Break Up Stitches	×

Extreme	Cancel
	Help

This function works on the visible stitches. Hide colors and use Draw Range to isolate an area of the embroidery if you do not wish to affect the whole embroidery.

# **Design Separator**

Use Design Separator 0 to break an embroidery into two parts. Click Design Separator and the pointer changes to the add point pointer 0. Place a line to enclose the area of the embroidery you wish to split. Two new embroideries are automatically created, one for each part of the split. The new embroideries are shown as separate subdesigns in the Design Select area of the Home tab.

The original embroidery

A separated section

Design Separator can be used to cut out a section of an embroidery you wish to keep, or to cut away a section of an embroidery you wish to discard. This may be preferable to making a selection and then using Cut, as Design Separator creates a clean split with traveling stitches where it is necessary to move along the split line. Design Separator may also be used to split an embroidery into two subdesigns for stitching out.

To automatically split an embroidery for stitching out multiple hoopings in a particular hoop, it is recommended to use PREMIER+m 2 Embroidery Extra or PREMIER+m 2 Design Aligner. If you want to keep the split sections then you must save them.

#### Shortcuts

- Modify Design, Modify Tab: 🐠
- Keys: Alt, M, DS

# Separating for Cutting Out

Use these steps when separating an embroidery to cut out or cut away a section.

- 1 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Lion' embroidery.
- 2 Click Draw All Stitches **III**.

This is recommended as Split Design cuts through all stitches whether or not they are visible.

Alternatively, ensure Ghost Mode 🗾 is selected.

3 If desired, in the View tab, select 2D View with Stitch Points 29, so you can see any movement stitches.

You can also use Grid Off # to aid in seeing movement stitches.

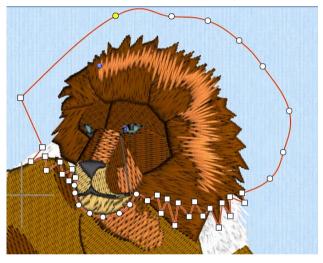

- 5 On the Modify tab, click the Design Separator icon 2. The pointer changes to the place point pointer  $\mathbb{R}_{0}$ .
- 6 Click the desired start point for your cut line. If possible, choose a start point in clear space as this will make it easier to see where you started.

7 Click to place more points. This is the line along which the embroidery will be cut. As you click the third point on the line, the line becomes closed (it becomes a loop). As you place more points the line adjusts itself.

The line may 'swing' while you place points. Just carry on, you can adjust it afterwards.

- Use Ctrl+click to place square nodes for straight lines. *Click Delete to remove the last-placed point.* When you cross stitching in the embroidery, try to avoid following outlining stitches as this may fragment the outline.
   Move the pointer over one of the podes on the line. The pointer changes to the Move Node.

If you click while the Freehand Point pointer  $k_0$  is active, another point will be added to the line. Click points until you are at or near the start point again.

Notice that the dark thread color has been hidden and shown in Ghost Mode. This makes it easier to see where to place the cut line.

- 11 Right-click to cut the embroidery. When the split has been calculated, the design has been cut in two, with the head of the lion as the active embroidery.
- **12** Click the Home tab. In the Design Select area you can see the two parts of the embroidery as separate subdesigns.
- 13 If desired, select one of the sections and Delete  $\times$  it.
- 14 Use Save As 🔜 to save the split sections under a new name.

### Separating for Stitching Out

Use these steps when splitting an embroidery for stitching out in sections. In the example the embroidery Documents\Premier+2\Samples\Modify\Stitch\Large Flower is used.

1 Click File, New T to open a new window.

10

- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Large Flower' embroidery.
- 4 Click Hoop 🕕 to select a hoop size large enough for the embroidery, or use Enter Size to set a temporary custom hoop size. Click OK after selecting your hoop.

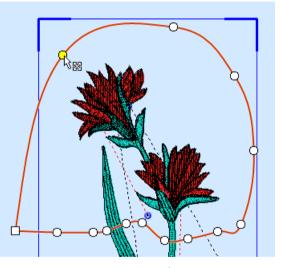

If a message appears asking if you wish to change the hoop size for all open embroideries, click No.

- Click Draw All Stitches .
   This is recommended as Split Design cuts through all stitches whether or not they are visible.
- 6 If desired, in the View tab, select 2D View with Stitch Points 20, so you can see any movement stitches. You can also use Grid Off *to* aid in seeing movement stitches. It is particularly useful to see movement stitches when splitting for stitching out in sections, as this may help avoid creating unnecessary short stitches.
- 7 If desired, Zoom In 🗟 to the end of the hoop where you will place the cut line. Once you have started to place the cut line, you can use mouse wheel zoom (hold Ctrl and move the mouse wheel) if you wish to change the zoom level.
- 8 On the Modify tab, click the Design Separator icon
- 9 Click to place the first point outside the hoop. Click on one side of the section of the embroidery where you wish to cut across.

This ensures that you cut as few movement stitches as possible.

- 10 Click points to place a cut line across the embroidery to the opposite side of the hoop. When you cross stitching in the embroidery, try to follow the angle of the stitches. Also, avoid following outlining stitches as this may fragment the outline.
- 11 Click two or three points around the outside of the hoop to go around one end of the hoop in long steps and return to the start point.

- 12 Adjust the nodes with the Move Node  $k_{\mathbb{R}}$  pointer as desired.
- **13** Right-click to close the area.
- 14 Click the Home tab to view the two subdesigns in the Design Select area.
- 15 Click Select All Visible 🔡. The top half of the embroidery is selected.
- 16 Click Copy 📄. The copied section appears in the Clipboard block.
- 17 In the Paste drop-down menu, select Paste Into New Window 💼.
- 18 Click the first tab at the bottom of the work area.
- 19 In the Home tab, select the bottom half in the Design Select area.
- 20 Click Select All Visible 🔡. The bottom half of the embroidery is selected.
- 21 Click Copy 📄. The copied section appears in the Clipboard block.
- 22 In the Paste drop-down menu, select Paste Into New Window 💼. There are now three tabs at the bottom of the work area.
- 23 Click Change Hoop 🕕 to change the hoop size to the hoop you will use to stitch out the sections.

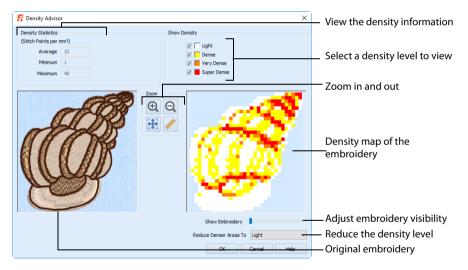

- 24 Click OK after selecting your hoop. A message appears asking if you wish to change the hoop size for all open embroideries. Click Yes.
- **25** Click Center in Hoop 🖳. The split section is in the center of the new hoop.
- 26 Click the tab for the other section at the bottom of the work area.
- 27 Click Center in Hoop 🖳. The other split section is now also in the center of the hoop.
- 28 Use Save As 🔜 to save the two subdesigns with their own names, for example Large Flower Top and Large Flower Bottom.
- 29 Print 🖶 a worksheet for each subdesign at 100%, to use as a template when stitching out the second area.

# **Density Advisor**

Use the Density Advisor *(Modify tab)* to view the density of the embroidery and, if desired, reduce the density where stitch points are tightly packed together.

View an embroidery with Density Advisor to determine if a particular embroidery may be troublesome when it is stitched out. Extensive areas of Very Dense or Super Dense stitching may cause difficulties such as thread and needle breakage. Isolated spots of dense stitching are unlikely to need adjustment.

The embroidery is shown in 3D on the left, and a density preview on the right shows the density of stitch points in the embroidery.

Click OK to reduce the density as desired. Click Cancel to close the Density Advisor without making changes, after viewing the density map.

Only visible stitches are affected. It is not available if a block is selected.

If the Density Advisor does not give you the desired results, use Undo to reverse the effect of Density Advisor.

# Using the Density Advisor

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.

- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Hermit Crab Shell Dense' embroidery.
- 4 Click the Modify tab.
- 5 Click Density Advisor *M*. The dialog box appears.
- 6 In the Show Density area, use the checkboxes to view where the dense areas of stitching are.
- 7 Use the Reduce Denser Areas drop-down list to reduce the density of dense areas of stitching.
- 8 Close the dialog box to view your changes.

If you are not satisfied with the result, click Undo 👩 and try again.

#### Shortcuts

- Keys: Alt, M, DA

# **Density Statistics**

This shows the density of the stitches, per square millimeter. Average is the overall density of the stitches, Minimum is the lowest density and Maximum is the highest density.

This is not affected by the Show Measurements setting in PREMIER+™ 2 Configure.

# Show Density

Check and uncheck the desired options to show where the density is Light (up to 10 stitch points per mm<sup>2</sup>), Dense (up to 17 stitch points per mm<sup>2</sup>), Very Dense (up to 25 stitch points per mm<sup>2</sup>) or Super Dense (over 25 stitch points per mm<sup>2</sup>).

# Zoom Controls

Use the Zoom Controls to zoom in and out, zoom to fit and zoom to Real Size.

### Zoom In

Use Zoom In 🕘 to enlarge the view of an area of the 3D and density views.

Click Zoom In 1 and move the pointer over the 3D or density view. The mouse pointer changes to the zoom in pointer 1. Then either click a point on the view you want to zoom in towards, or click and drag a rectangle around the area you want to zoom in to and release the mouse button to zoom.

When zoomed in, use the scroll bars to move around the 3D and density views.

### Zoom Out

Use Zoom Out to zoom out of the 3D and density views, to show more of the embroidery in each view.

Click Zoom Out  $\bigcirc$  and move the pointer over the 3D or density view. The mouse pointer changes to the zoom out pointer  $\bigcirc$ . Then click a point on the 3D or density view you want to zoom out from.

### Zoom To Fit

Click Zoom To Fit 🔠 to view all of the stitches in the Before and After views.

Zoom

#### Real Size

Click Real Size 🧪 to show the Before and After views at the Real Size selected in PREMIER+<sup>™</sup> 2 Configure.

# **Reduce Denser Areas To**

This is a drop-down list with options for Light, Dense and Very Dense. This determines the level of density reduction to apply when you click OK.

The density is reduced to the maximum allowed for the option you choose. For instance, if you choose Dense, then Very Dense and Super Dense areas will be reduced to 17 stitch points per mm<sup>2</sup>.

# Stitch Optimizer

Click Stitch Optimizer <br/>
 to improve the stitchout of the embroidery, both in speed and<br/>
quality. One of the effects of the Stitch Optimizer is to remove unnecessary short stitches.<br/>
The Stitch Optimizer only affects visible stitches. A confirmation message appears that<br/>
shows the number of stitches removed from the embroidery.

Feel free to try using the Stitch Optimizer on most embroideries, especially after changes have been made to an embroidery, before saving the final result. However, the Stitch Optimizer only optimizes an embroidery once, rather than making progressive changes to the embroidery.

Use Optimizer Preferences is to change the settings used by Stitch Optimizer. This is recommended only if you feel that stitches have been removed that affect the look of the embroidery. Changes to Optimizer Preferences are very rarely needed.

By default, Stitch Optimizer is also used automatically after using Resize. Cutwork Needle lines in the Inspira Cutwork Needle "thread range" and Felting Needle Colors in the Inspira Felting Needle "thread range" are unaffected by Optimize Stitch Length. Use Stitch Optimizer before using Export [5], or as part of the Export process. See "Export" on page 18.

# **Basting Line**

Use a basting line to secure your fabric before beginning embroidery. Basting Line for Visible Stitches I places a line around visible stitches, and Basting Line for All Designs a places a line around all designs on the screen.

# **Basting Line for Visible Stitches**

Use Basting Line for Visible Stitches 🕘 to insert a rectangular basting line automatically around the visible stitches. This will secure the fabric and stabilizer before beginning embroidery.

Set the margin and stitch length in the Basting Line section of Preferences 🚞.

The basting line is automatically created immediately before the visible stitches using a medium gray color.

#### Shortcuts

- Modify Design, Modify Tab: 🔯
- Keys: Alt, M, BL, BL

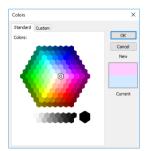

# Add a Basting Line to Sweet Rose Border

- 1 Click PREMIER+ $^{\text{M}}$  2 Configure  $\frac{1}{100}$ , then click the Appearance tab.
- 2 To change the Background, click the drop-down arrow and then click More Colors on the drop-down panel. The Colors dialog box appears, with the Standard tab selected.
- 3 In the hexagonal matrix, click the medium pink hexagon sixth from the right (just to the right of the central white hexagon). The color sample on the right will show the old and new colors.
- 4 Click OK. The new color is shown on the Color button. This background color is similar to the fabric to be used for the embroidery.
- 5 Click Apply and the new color will be seen on the Clipboard in PREMIER+<sup>™</sup> 2 Modify. Click OK to close PREMIER+<sup>™</sup> 2 Configure.
- 6 In PREMIER+<sup>™</sup> 2 Modify <sup>™</sup>, click File, New <sup>™</sup> to open a new window.
- 7 In the Quick Access toolbar, click Insert <u>5</u>.
- 8 Browse to the folder Documents\Premier+2\Samples\Modify\Stitch, then select the embroidery 'Sweet Rose Border'.

The embroidery is loaded into the work area.

Alternatively, you could use the embroidery you created in "Add a Satin Border to the Sweet Rose Embroidery" on page 87.

9 Hover the pointer over the colors in the worksheet. All of the colors are Sulky, except the 13th color which is Robison-Anton. Use Color Tone to change the thread range.

- 10 In the Home tab, click Color Tone 🚺 . The Color Tone dialog box appears.
- 11 In the Thread Range drop-down list, select Robison-Anton Rayon 40. The thread shades change a little.
- 12 Click OK to close the Color Tone dialog box. The embroidery background would match the fabric background better if it used a paler shade.
- **13** Double-click the first color in the color worksheet (Robison-Anton Rayon 40 2203 Gold). The Color Selection dialog box appears.
- 14 Browse for thread number 2374 (Emily Pink) in the list and select it, or type 2374 in the Find Thread box.
- 15 Click OK to close the Color Selection dialog.
- 16 Click File, Preferences 📃.
- 17 In Basting Line, ensure that Stitch Length is set to 4mm, and that Margin is set to 5mm.

- 18 Click the Modify tab.
- 19 Under Basting Line, click Basting Line for Visible Stitches 🔯. A basting line is placed around the embroidery.

This will secure the fabric and stabilizer before beginning the embroidery.

Note that the basting line is created using a grey color to contrast with the background fabric.

After placing the basting line around this embroidery, use the Appearance tab of PREMIER+ $^{m}2$  Configure to set the Background Color back to the default blue (RGB 211, 233, 255) in the Colors dialog box Custom tab. See the instructions at the beginning of this section.

# Basting Line for All Designs

Use Basting Line for All Designs 🔝 to insert a rectangular basting line automatically around all designs on the screen. This will secure the fabric and stabilizer before beginning embroidery, and is useful for an embroidery project with multiple sections.

Set the margin and stitch length in Preferences.

The basting line is automatically created as the first subdesign, using a medium gray color.

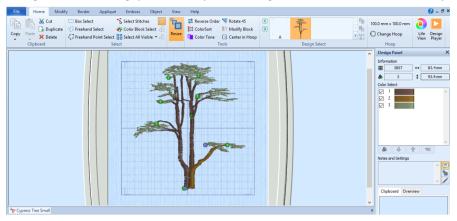

Shortcuts

- Modify Design, Modify Tab: <a>[8]</a>
- Keys: Alt, M, BL, BF

# **Alignment Stitches**

Use Alignment Stitches 🕂 to mark the first or last subdesign as an alignment stitch subdesign.

Use Alignment Stitches to align your embroidery with the background fabric, or with another embroidery.

Select the alignment stitch section on the work area using the select tools in the Home tab, then click Alignment Stitches 🕂 in the Modify tab to flag it as a set of alignment stitches.

To mark a set of alignment stitches as a normal subdesign, select the section in the Home tab, and then deselect Alignment Stitches 듺 in the Modify tab.

### **Alignment Stitch Sections**

Either the first or last subdesign in a design can be marked as Alignment Stitches. In the Home tab an Alignment Stitch subdesign is shown by the letter 'A' in the Design Select gallery, rather than the number used for standard subdesigns.

Most editing functions are not available for Alignment Stitch subdesigns. To edit the subdesign, change it to a normal subdesign, edit it, then change it back again after editing.

- When a .vp4 design with alignment stitches is Opened <sup>20</sup>/<sub>2</sub>, the alignment stitches are retained.
- When a .vp4 design with alignment stitches is Inserted sinto a project, the alignment stitches are discarded.

To change the alignment stitches in a .vp3 format embroidery into an alignment stitch subdesign, use Design Separator to create two different subdesigns; one for the embroidery, and one for the alignment stitches. Then in the Design Select area on the Home tab, move the alignment stitches to the front (or back) of the design. With the alignment stitches selected, click Alignment Stitches  $\fbox{}$  in the Modify tab to change them into an 'A' alignment stitch subdesign.

#### Shortcuts

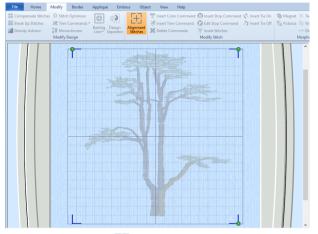

- Modify Tab: +
- Keys: Alt, M, A

### **Using Alignment Stitch Sections**

- 1 Click Change Hoop ①. From the Universal Hoop Group, set the Hoop Size to 100mm x 100mm Universal Square Hoop 1. Click OK.
- 2 Ensure that the Home tab is selected.
- 3 Click File, Open P to open an existing design in a new window.
- 4 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Small Cypress' embroidery. The embroidery is opened with the second subdesign selected, the tree, as the first subdesign is alignment stitches.
- 5 In the Design Select area, click design 'A' the alignment stitches. Most of the editing functions become unavailable (grayed out).

You cannot edit the stitches in an alignment stitch subdesign.

6 Click the Modify tab. Alignment Stitches 🕂 is enabled, but all other functions are disabled.

- 7 Click Alignment Stitches 🕂. The editing functions are now available.
- 8 Click the Home tab. In the Design Select area the alignment stitch section is now subdesign 1, and the tree has been renumbered to 2.
- 9 Close the window without saving your changes.
- 10 Click File, New 🛅 to open a new window.
- 11 In the Quick Access toolbar, click Insert 🛐.
- 12 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Small Cypress' embroidery.
- 13 Look at the Design Select area. This time there is no Alignment Stitch subdesign.

When you Open  $\mathbb{P}^2$  an existing embroidery the alignment stitches are retained, as they are part of a complete design. However, when you Insert  $\mathfrak{F}_2$  a design into an existing project, any alignment stitches are not needed, so they are not retained.

### Convert the Alignment Stitches in a .VP3 Embroidery

To change the alignment stitches in a .vp3 or other format embroidery into an alignment stitch subdesign, do as follows:

- 1 Load the embroidery to be converted.
- 2 Click the Modify tab.
- 3 Use the Design Separator of to create two different subdesigns; one for the embroidery, and one for the alignment stitches.
- 4 Click the Home tab.

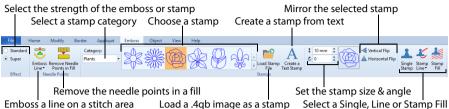

- 5 In the Design Select area of the ribbon bar, move the alignment stitches to the front (or back) of the design.
- 6 Click the Modify tab.
- 7 With the alignment stitches selected, click Alignment Stitches 🕂 to change them into an 'A' alignment stitch subdesign.

Return to the Home tab to check that the alignment stitches are now an Alignment Stitch subdesign.

# Embossing

Use the Emboss features to add beautiful patterns to your embroideries.

#### Emboss Tab

# Effect

Use Effect to change the prominence of embossed or stamp effects. Select from Standard or Super.

The Super effect creates a heavier impression as more needle points are removed surrounding the stamp or embossed line.

#### Standard

When needle points are added, they are not placed close to existing needle points.

#### Shortcuts

- Effect, Emboss Tab
- Keys: Alt, E, ST

#### Super

When needle points are added, if an existing needle point is found close by, it is removed before adding the new needle point. This creates a heavier impression in the stitched area.

#### Shortcuts

- Effect, Emboss Tab
- Keys: Alt, E, SU

# **Needle Points**

Use the Emboss Line 📚 functions (Freehand Tablet Emboss Line 🖋 and Freehand Point Emboss Line 🏈 ) to emboss lines on areas of stitching. Use Remove Needle Points in Fill 🎬 to remove stitch points before embossing.

# Freehand Tablet Emboss Line

Use Freehand Tablet Emboss Line 🥒 to draw a line to emboss on an area of stitching. To move the points in the line after drawing, place

To change a round (curved line) point to a square (straight line) point, hold down the Ctrl key and click the point while moving it.

Each line you place, as ended by a right-click, is treated separately by Undo.

#### Shortcuts

- Needle Points, Emboss Tab: *I*
- Keys: Alt, E, E, FT

### Draw an Embossed Line on a Petal

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Pink' embroidery.
- 4 Click the Emboss tab.
- 5 Zoom in on one of the petals.
- 6 In the Emboss Line 🕇 drop-down menu, click Freehand Tablet Emboss Line  $\mathbb{Z}$ . The pointer changes to the draw pointer  $\mathbb{V}$ .
- 7 Draw a curved line along the length of the petal. The first point appears automatically as a small square.
- 8 Release the mouse pointer to complete the line. The emboss line will appear with the first point as a square and later points as circles, except for a yellow square final point.
- 9 Place the pointer over a node. The Move Node pointer  $k_{\mathbb{R}}$  appears.
- 10 Click and drag to move the node, and adjust the line.
- 11 Use Ctrl+click to change a round node to a square node while moving it. Round nodes form a curved line, and square nodes form an angular line. Click Delete to remove the last-placed point.
- **12** Right-click to emboss the line on the petal.
- 13 Repeat to place as many embossed lines as desired. Once an embossed line has been placed it can be removed with Undo, but it cannot be further edited.

# Freehand Point Emboss Line

Use Freehand Point Emboss Line ≶ to place points to emboss a line on an area of stitching.

Each line you place, as ended by a right-click, is treated separately by Undo.

#### Shortcuts

- Needle Points, Emboss Tab: <a>5</a>
- Keys: Alt, E, E, FP

### Place Points to Emboss a Line on a Petal

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Flower Pink' embroidery.
- 4 Click the Emboss tab.
- 5 Zoom in on one of the petals.
- 6 In the Emboss Line 🐯 drop-down menu, click the Freehand Point Emboss Line ≶ icon. The pointer changes to the Freehand Point pointer  $k_0$ .
- 7 Click to place your first point. The point appears automatically as a small hollow square.
- 8 Click to place a second point.

The second and subsequent points are round.

- 9 Continue placing points along the desired path.
- **10** Curved lines are created automatically. For corners and straight sections, hold down the Ctrl key. *Click Delete to remove the last–placed point.*
- 11 To move one of the nodes, move the pointer over the node. The pointer changes to the Move Node pointer  $k_{BB}$ .
- 12 Adjust the position of the node as desired.
- **13** Right-click to end the line and deselect the function. The emboss line will appear on the selected petal.
- 14 Repeat to place as many embossed lines as desired.

# Remove Needle Points In Fill

Use Remove Needle Points In Fill To remove most of the needle points within an area of stitches, leaving the area blank so that the stamp you apply will show clearly. Only visible stitches are affected.

If underlay stitches are not hidden, they will also have their stitch points removed. If desired, use the Draw Range slider bars to hide underlay stitches so they are not affected.

Use this function to prepare areas with existing patterns for stamps or embossed lines.

1. Original pattern in 2D

2. Needle points removed in 2D

Not all stitch points are removed. If you find it necessary to have all stitch points removed from inside an area then use Delete  $\times$ . Select a block within the bounds of an area using one of the Select functions. Ensure you do not select any part of the edge of the area or the shape of the area will be lost or distorted. For instance, if you have a rectangle then use Box Select to make a block that is just inside the stitches along the edges of your rectangle. Delete the stitch points with Delete and you will be left with the shape of the area with stitches going across it, but no stitch points inside the area.

#### Shortcuts

- Needle Points, Emboss Tab:
- Keys: Alt, E, RN

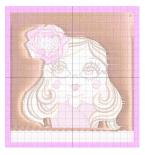

### Remove the Stitch Points from an Embroidery Background

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Girl with Rose' embroidery.
- 4 In the Control Strip, click Draw Next Color Block **▶** once so that the background color behind the girl's head is shown.
- 5 Click Ghost Mode W. The stitches that were hidden are now shown in pale colors.
- 6 Move the Draw To End handle at the right of the slider bar to approximately stitch number 3114. This hides the background areas between the girl's head and hair, and below her portrait. To adjust stitch by stitch, use the arrows in the stitch number boxes.

- 7 Click the Emboss tab.
- 8 Click Remove Needle Points in Fill . The stitches making the flat fill pattern will be removed.

It is recommended to use Remove Needle Points in Fill before stamping an area of stitches. This is so that the new pattern or series of stamps is clearly visible, rather than adding to an existing fill pattern.

# Stamps

Stamps are used to place extra stitch points on existing threads to make a predefined symbol or pattern. Stamps can be placed individually, in lines or used to fill all visible stitches with the selected pattern. The Stamp functions are found on the Emboss tab.

# Select a Stamp

There are 7 named categories of stamps.

Select a set of stamps by name from the drop-down list to the left of the Stamp samples.

Category: Plants • Animals Climate FoodAndDrink Games People Plants Tiles

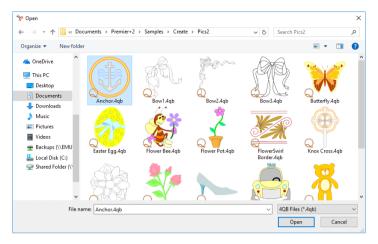

Use the arrows at the right of the Stamp box to scroll through the stamps within a set, or click the drop-down arrow to view the stamps gallery.

When you see the desired stamp, click it. It will be highlighted with a different shade of blue and it will be shown in the sample box at the current Size and Angle.

# Load Stamp File

Use Load Stamp File 📄 to load a .4qb file to use as a stamp. Load Stamp File opens the Open dialog box that shows thumbnails of .4qb files.

Load a 4qb file as a stamp by clicking the corresponding thumbnail.

Make your own .4qb files in PREMIER+™2 Create or 5D™ QuiltDesign Creator.

To see details about a file, position the arrow pointer over the desired thumbnail. A label showing the file information will appear.

#### Shortcuts

- Stamps, Emboss Tab: <a>Planet</a>
- Keys: Alt, E, L

### Load a Picture to Stamp an Area

- 1 On the Emboss tab, click Load Stamp File ᢪ and the Open dialog box appears.
- 2 Browse to the desired folder.
- 3 Scroll down to see further designs, if available.
- 4 Click on a picture to highlight the .4qb design
- 5 Click Open to load the design, and close the viewer.

# Create a Text Stamp

With Create a Text Stamp  $\underline{\Lambda}$  you can use the TrueType<sup>®</sup> or OpenType<sup>®</sup> fonts on your computer to create a stamp with your selection of letters.

Only the outlines will be used to create needle points.

Choose from Regular, Bold, Italic or Bold Italic styles, and adjust the font size in points.

🔗 Create Text				×
Georgia	∼ Regular	~ 144	~	
SWEET ROSE			Ok	(
			Can	cel
			Hel	ρ

Enter the desired text and click OK. The text then appears in the preview in the Emboss tab. Adjust the Size and Angle as desired.

Create multi-line text by pressing ENTER while typing in the Text box.

#### Shortcuts

- Stamps, Emboss Tab: A
- Keys: Alt, E, C

### Add a Name Below the Sweet Rose Embroidery

- 1 Click File, New 👕 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Girl with Rose Background' embroidery.

Alternatively, you could use the embroidery you created in "Stamp the Background of the Sweet Rose Embroidery" on page 176.

- 4 In the Control Strip, click Draw Next Color Block 
  → . The complete background is shown. It is not necessary to isolate the visible stitches with the draw range handles, as no needle points will be removed.
- 5 Leaving the flat fill background unchanged, set Effect to Super. The Super effect creates a heavier impression as more needle points are removed surrounding the stamp.
- 6
- 7 Click Create a Text Stamp A. The Create Text dialog box will appear.
- 8 In the left drop-down list, select Georgia as the font.
- 9 In the style (center) drop-down list, select Bold.
- 10 In the furthest right (font size) drop-down list, ensure that 144 is selected. The font size does not matter, as the stamp's height can be changed before it is used.
- 11 Click inside the text box. The pointer changes to an I-bar T.
- 12 In the text box, enter the words: SWEET ROSE
- 13 Click OK. The stamp preview box now contains your text.
- 14 Click Single Stamp 2, then move the pointer over the work area. The pointer is now the text "SWEET ROSE".
- **15** The lettering is slightly too large to fit in the space at the bottom of the picture. Set the Size to 6mm.
- 16 Move the stamp so that the letter 'T' is over the center grid line.
- 17 Click to place the stamp.
- **18** Right-click to deselect your text stamp.
- 19 In the Control Strip, click Draw All Stitches

🔗 Create Text			×
Georgia	∼ Regular	~ 144 ~	]
SWEET ROSE			ОК
			Cancel
			Help

To add stamp buttons to the jacket, see "Make Diamond Stamp Buttons for the Sweet Rose Embroidery" on page 173.

# Stamp Size

Set the stamp Size from 2 to 50mm in 1mm steps. The default setting is 10mm.

To see how big a stamp will be, select Single Stamp and move the mouse pointer over your embroidery.

# Stamp Angle

Rotate the stamps to any angle from 0 to 359 degrees. One reason for changing the angle is to get the best result from a stamp, so that any straight lines in the stamp are at a different angle to threads in the embroidery. When you have parallel or nearly parallel lines between the stamp and the threads then fewer stitch points will be placed and the stamp will be less noticeable.

Stamp [b]

0 degrees

45 degrees

The stamp sample to the right of the Size and Angle boxes shows how the stamp will look. Use Single Stamp to see how

the stamp will be used on the embroidery and as a check against parallel lines between the stamp and threads.

# Vertical Flip

Use Vertical Flip  $\leq$  to mirror the selected stamp from top to bottom.

Shortcuts

- Stamps, Emboss Tab: 🚄
- Keys: Alt, E, V

# Horizontal Flip

Use Horizontal Flip 🗼 to mirror the selected stamp from left to right.

Shortcuts

- Stamps, Emboss Tab: 🛝
- Keys: Alt, E, H

# **Applying Stamps**

The following methods are available to place stamps onto your embroidery.

Single Stamp Use Single Stamp 1 to place individual stamps.

Stamp Line Use the Stamp Line 炎 functions to create a line of stamps.

Freehand Tablet Stamp Line Use Freehand Tablet Stamp Line *g* to draw a line of stamps in any direction.

Freehand Point Stamp Line Use Freehand Point Stamp Line 5 to place points for lines of stamps in any direction.

Stamp Fill Use Stamp Fill 3 to fill all visible stitches with the currently selected stamp.

# Single Stamp

Use Single Stamp 1 to place the currently selected Stamp one at time with each click of the mouse. The mouse pointer will become the shape of the selected stamp when the mouse is over the work area. Use this to see how big the stamp will be on the embroidery. Click to place the stamp.

Select different stamps and change the stamp size or angle without deselecting Single Stamp. Right-click to deselect Single Stamp. Only visible stitches are affected.

#### Shortcuts

- Stamps, Emboss Tab: 1
- Keys: Alt, E, SS

### Add a Single Stamp to a Thick Border

- 1 Isolate the stitches you want to stamp by hiding colors and/or using Draw Range.
- 2 If required, click the Remove Needle Points In Fill icon 😴 to remove any existing pattern.
- 3 In the Stamps area, select the desired stamp.
- 4 Select the size for the stamp using the Size box. In the example on the right, a star in the Climate stamp category was used.
- 5 Enter the Angle to which you want to rotate the stamp.
- 6 Click the Single Stamp icon 2. When you move the mouse pointer into the work area it will show the shape, size and angle of the stamp as it will be used.

- 7 Click on a stitched area to place the stamp. Stitch points will be inserted each time you click. If you click in a blank area or on hidden stitches then there will be no effect. If desired, select different stamps and change the size or angle while Single Stamp is active.
- 8 When you have placed all the required stamps, right-click to deselect Single Stamp. If you use Undo after placing Single Stamps then each Undo will undo one stamp at a time.

# Freehand Tablet Stamp Line

Use Freehand Tablet Stamp Line *for the place lines of the currently selected stamp across an embroidery in any direction. Click and drag to draw the line, then release the mouse button to preview the line of stamps. Adjust the nodes on the line as desired to change the direction of the line. Right-click to place the line of stamps. Only visible stitches are affected.* 

Select Freehand Tablet Stamp Line again to place another stamp line.

#### Shortcuts

- Stamps, Emboss Tab: *Ø*
- Keys: Alt, E, SL, FT

### Draw a Line of Stamps Across an Embroidery

- 1 Isolate the stitches you want to stamp by hiding colors and/or using Draw Range.
- If required, click the Remove Needle Points In Fill icon To remove any existing pattern.
- 3 Select the desired stamp.
- 4 Select the size for the stamp using the Size box.
- 5 Enter the Angle to which you want to rotate the stamp.
- 6 In the Stamp Line drop-down list, click the Freehand Tablet Stamp Line icon *2*.
- 7 Click and drag across a visible area of stitches. As you drag the mouse, a line at the selected size and angle will be shown.
- 8 Release the mouse button to view the stamp line.
- 9 To adjust the nodes on the line, move the pointer over a node. The pointer changes to the move node pointer k<sub>BB</sub>. Drag the node as desired.

Use Ctrl+click to replace a round node with a square node to make an angular line. Click Delete to remove the last-placed point.

- **10** If desired, select different stamps and change the size or angle while Freehand Tablet Stamp Line is active.
- **11** Right-click when the line of stamps is placed as desired. Stitch points will be inserted according to how you have placed the line of stamps.
- **12** To place other lines, reselect Freehand Tablet Stamp Line. If you are not satisfied with a particular line of stamps, use Undo to undo one line of stamps at a time.

# Freehand Point Stamp Line

Use Freehand Point Stamp Line *S* to place lines of the currently selected stamp across an embroidery in any direction. Click and drag to preview the stamp outlines, then release the mouse button to place the line of stamps.

Select different stamps and change the stamp size or angle without deselecting Stamp Line. Right-click to deselect Stamp Line. Only visible stitches are affected.

Shortcuts

- Stamps, Emboss Tab: 5
- Keys: Alt, E, SL, FP

### Make Diamond Stamp Buttons for the Sweet Rose Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.

- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Girl with Rose and Name' embroidery. Alternatively, you could use the embroidery you created in "Add a Name Below the Sweet Rose Embroidery" on page 169.
- 4 In the Emboss tab, select the Games stamp Category, then click the diamond stamp (number 9).
- 5 Set the stamp size to 4mm.
- 6 Set the Angle to 30 degrees. The preview changes to show the new angle.
- 7 In the Stamp Line drop-down list, click Freehand Point Stamp Line 5.
- Click and drag the slider on the Zoom Bar at the bottom of the Design Panel to zoom in on the picture of the girl. Alternatively, click the plus icon to increase magnification 10% each time.
- 9 Click to place points for a line of buttons down the front of the girl's jacket.
- **10** Right-click to finish the line of buttons.
- 11 Click Zoom To Fit 🔠.

If you are not satisfied with the line of stamps, use Undo to undo one line of stamps at a time. Right-click to deselect the Stamp Line function before using Undo.

You can select Freehand Point Stamp Line *s* again to place other lines. If desired, select different stamps and change the size or angle while Stamp Line is active.

To add a border to the embroidery, see "Add a Satin Border to the Sweet Rose Embroidery" on page 87.

# Stamp Fill

Use Stamp Fill 3 to fill all visible stitches with the currently selected stamp. It is recommended to use Remove Needle Points In Fill from the visible stitches before using Stamp Fill.

1. Original pattern in 2D with Stitch Points

3. Rose used for Stamp Fill in 2D

2. Needle points removed in 2D

4. Roses in 3D

To use Stamp Fill, isolate the stitches you want to stamp by hiding colors and/or using Draw Range, then use Remove Needle Points In Fill 🚰 to remove any existing pattern. Select your desired stamp and its Size and Angle, then click Stamp Fill 🦗. An animation will play while the fill is calculated. When the process is complete, the visible stitches will be shown with the new pattern stamped in.

If you are not satisfied with the result, use Undo to undo the fill, then reselect Stamp Fill.

#### Shortcuts

- Stamps, Emboss Tab: 4/2
- Keys: Alt, E, SF

## Stamp the Background of the Sweet Rose Embroidery

- 1 Change the background color to pink. See "Add a Basting Line to Sweet Rose Border" on page 158.
- 2 Click File, New 🛅 to open a new window.
- 3 In the Quick Access toolbar, click Insert <u>5</u>.
- 4 Browse to the folder Documents\Premier+2\Samples\Modify\Stitch.
- 5 Load the 'Girl with Rose' embroidery.
- 6 In the Control Strip, click Draw Next Color Block a once so that the background color behind the girl's head is shown.
- 7 Click Ghost Mode 🚩 . The stitches that were hidden are now shown in pale colors.
- 8 Move the Draw To End handle at the right of the slider bar to approximately stitch number 3114. This hides the background areas between the girl's head and hair, and below her portrait. Stitch numbers are given as guides only. It is more important to ensure that the correct stitches are hidden

or left showing than to follow the exact stitch numbers.

To adjust stitch by stitch, use the arrows in the stitch number boxes.

Click in the space on the slider bar on either side of the handle to move it in that direction and change the stitch number by 50 at a time. You can also click and hold to change the number more rapidly, but the handle will stop when it reaches the arrow pointer.

- 9 Click the Emboss tab.
- 10 Click Remove Needle Points in Fill . The stitches making the flat fill pattern will be removed.

It is recommended to use Remove Needle Points in Fill before stamping an area of stitches. This is so that the new pattern or series of stamps is clearly visible, rather than adding to an existing fill pattern.

- 11 Set Effect to Standard.
- 12 In the stamps area, select Plants in the Category drop-down menu.
- 13 Click the rose stamp (number 3) and it will be shown in the preview box for the stamps.
- 14 Click Single Stamp 1, then move the pointer over the work area. The pointer is now a rose.

You can change the stamp and stamp options while Single Stamp is selected. You can also do this when using Freehand Tablet Stamp Line 🖉 and Freehand Point Stamp Line ≶ .

- 15 Place the rose pointer over the area between the girl's shoulders and hair. At the default size (10mm) the stamp is a little large to be used in this area; a smaller size would look better.
- **16** Set Size to 8mm and move the pointer back over the work area. The pointer is now smaller. *The pointer uses the size and angle that you choose in the Stamps area of the ribbon bar.*
- 17 Click Stamp Fill J. The new stitch points are calculated, then the new fill pattern will be shown, giving a sculpted rose background behind the girl's head and shoulders.
- 18 Click Draw All Stitches 🔛.
- **19** Click Draw Next Color Block **(b)** . Only the background color is shown.
- 20 Move the Draw From Start slider at the left of the slider bar to approximately stitch number 7231, so that only the background showing between the girl's hair and body is visible. The end number should be about 7586.

If this isolates a different part of the design, check that Effect is set to Standard, and stamp size is set to 8mm.

- 21 Click Remove Needle Points in Fill 🚟.
- 22 Ensure that Standard is selected.
- 23 Click Stamp Fill 24 Click Stamp Fill 24 Click Stamp Fill 25 Click Stamp Fill 26 Click Stamp Fill 27 Click Stamp Fill 27 Click Stamp Fill 27 Click Stamp Fill 28 Cli

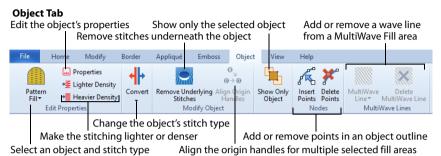

The end number has now changed to approximately 7922. The start and end numbers change as needle points are added and removed.

The movement stitch between these two small background areas is concealed by the girl's jacket. It is recommended to hide any visible movement stitches before stamping, to ensure that they are not turned into normal stitches. In 2D view, movement stitches appear as dashed lines of stitches.

- Click Draw All Stitches .
   To add a name to the embroidery, see "Add a Name Below the Sweet Rose Embroidery" on page 169.
- 25

# **Editing Objects**

You may want to edit areas and lines as objects, changing their properties; for example a fill type, density or pattern. Select the Object tab, click inside the desired area to select the object, then change the outline of the object, or right-click to access and change its properties.

If an object is difficult to select, use the Control Strip features. Alternatively, use Show Only Object 🏨 to hide other objects, then select it.

# Select Objects

In the Object window in PREMIER+<sup>™</sup> 2 Modify, designs are made up of a sequence of lines and areas (e.g. stitch lines, fills and columns). Each area, line or column is defined by a number of points.

# Select an Object to Edit

In the Object window move the pointer over the embroidery and you will see the points and outlines of the different areas. Click  $\mathbb{Q}_{\Omega}$  inside a line or an area to select the object. The Edit Properties section of the Object tab will show what object type it is.

To select multiple areas, hold down the Ctrl key when selecting. It is often helpful to use Draw Previous Color Block 🐢 or Draw Next Color Block 🔊 to isolate areas for object editing.

After locating the desired object, click and drag its points to change the shape of the object. You can insert extra points a or delete unwanted points a in the selected object.

Alternatively, click the Properties button or right-click the object to access a dialog box to alter properties such as Fill Pattern or Stitch Length.

# **Change Object Settings**

## Change the Settings for an Object

- 1 Open an embroidery.
- 2 Click the Object tab. The pointer changes to the Object Select  $\stackrel{\text{log}}{\longrightarrow} \Omega$  pointer.

3 Move the pointer until the desired area is highlighted, then click to select the object. You can use Ctrl + click to select more than one object at a time.

The object type is displayed in the Edit Properties and Convert sections of the Object tab.

- Right-click the object. A context menu is displayed.
   If you have selected more than one object type, you can choose the desired type in the context menu.
- 5 Select the stitch type properties from Edit... at the top of the context menu. The properties dialog box for that stitch type is displayed.
- 6 In the properties dialog box make the desired changes, and click OK to save the changes.

## Convert an Object and Change its Settings

- 1 Open an embroidery.
- Click the Object tab. The pointer changes to the Object Select <sup>k</sup>∩ pointer.
   To make it easier to select the desired object, use the color worksheet and slider bars to hide other objects.
- 3 Move the pointer until the desired area is highlighted, then click on the desired object. To change the properties of the selected object, right-click on the work area and select the object type from the context menu. The properties dialog box for the object type will appear.
- 4 To convert the selected object, choose the desired object type from the Convert drop-down menu.

Alternatively, right-click the object and select a new stitch type from the context menu. The properties dialog for the converted object will appear. Make any desired changes.

- 5 To further change the properties for a converted object, click Properties while that object is still selected, or right-click and select the stitch type. The properties dialog box for the object type will appear.
- 6 Change the settings in the properties dialog box then click OK to apply the new settings. Click Cancel if you decide not to save the new settings.

The settings are remembered in that session. After closing and reopening the program, lightly stitched fill types such as Contour Fill and MultiWave fill will be detected as running or double stitch lines, not as fills.

# **Edit Properties**

The stitch type for the currently selected object is shown in the Edit Properties area.

If more than one object is selected, further stitch types can be seen in the stitch type drop-down list.

### Properties

To change the properties for the selected stitch type, click the Properties ... button, or select Properties from the right-click context menu. The Properties dialog box for the stitch type will appear.

Shortcut

Keys: Alt, O, P

# Lighter Density

Use Lighter Density  $\sqrt{2}$  to make the stitches in the currently selected object(s) more open. When clicked, the density value is increased by 1.

### Shortcuts

- Object Tab, Edit Properties: +
- Keys: Alt, O, L

## **Heavier Density**

Use Heavier Density 📲 to make the stitches in the currently selected object(s) more closed. When clicked, the density value decreases by 1.

#### Shortcuts

- Object Tab, Edit Properties: +
- Keys: Alt, O, H

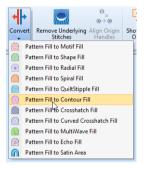

## Convert

Use the Convert function to change the currently selected object to another stitch type.

Select the object that you want to convert, then click Convert + and select a new stitch type from the drop-down menu. The stitch type properties dialog box will appear.

If more than one object is selected, there may be more than one stitch type to convert from.

Select the desired properties and click OK to change the stitch type. See "Change Bumblebee Wings to Contour Fill" on page 227.

Alternatively, right-click and select the stitch type to convert to from the context menu.

## Stitch and Area Types

Stitch types in the following two groups may be changed to any other stitch type in either of these groups:

When converting to a Satin Area, any holes in the fill area will be lost.

#### Columns

Objects in this group may be changed to any other stitch type in the group:

Satin Column 🌈	Feathered Satin 🕍
Richelieu Bars 💕	Tapered Motifs 💒

Any Column can be changed into a Satin Area, but it cannot be changed back.

## Area Types

Pattern Fill areas contain small stitches with repeating patterns, which can be selected from the system fill patterns.

Contour Fill areas use contour stitch lines. Vary the gap between stitch lines and the length of the stitches, use running, double or triple stitch.

Radial Fill 💽 areas use a

pattern of radiating lines

from an origin point that

can be moved. Vary the

stitch density.

Spiral Fill improved a reas use a spiral pattern from an origin point that can be moved. Use constant or gradient density.

MultiWave Fill areas use a wave pattern defined by a line, or lines, drawn on the fill area. Vary the density, or use a motif for the stitch lines.

Shape Fill areas use one of 75 different shapes. Vary the stitch density, use running stitch or motif lines for the fill.

in curved or straight lines. Vary the gap between stitch lines, use running or triple stitch.

QuiltStipple Fill

areas use stipple stitch

Crosshatch Fill (areas use diamond, square and parallel crosshatch patterns, or select the angles. Set the gap, style,

angles. Set the gap, style, line angle, stitch type and stitch length. Crosshatch fill is often used for lace designs.

on alternating lines.

Curved Crosshatch

Fill a areas use a mesh of curving lines. Vary the curve and the gap between the lines, and use running, double, triple or motif lines.

echo lines within or around a shape. Use rounded, square and diagonal corners, and set the gap between the echo lines.

Echo Fill 🔘 areas use

# Satin Areas

Satin Areas a contain zigzag stitches that fill the area from one end to the other at the same density. The stitch angle changes with the shape of the area, and can be adjusted as desired. Choose automatic edge walk and/or zigzag underlay.

Convert Satin Areas into any type of fill area.

# Columns

Columns may be converted into Satin Areas, but Satin Areas cannot be converted into any type of column.

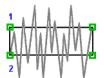

## Satin Column

Use Satin Column *(* to create a straight or curved column of parallel stitches. The column may be of any length.

The recommended maximum length for satin stitches is around 8-10mm, otherwise the stitches may be loose and not lie flat. To create satin wider than this, either overlap satin columns, or use a satin area.

## Feathered Satin

For lifelike realistic feathers or fur, use Feathered Satin we where the start and end points of the stitches are random rather than all parallel. Feathered satin may also be created with only one side feathered – the side where the first (A) or second (B) point was placed.

Feathered Both Sides

## Feathered Side A

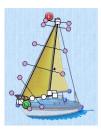

## Feathered Side B

## **Richelieu Bars**

Use Richelieu bars **\*** to create a column of short sections of satin perpendicular to the direction of the column. Choose the number of bars, and the width of the satin.

Richelieu bars are typically used for cutwork designs.

## Tapered Motifs

Use Tapered motifs  $x_{1}^{**}$  to create a line of motifs that vary in size according to the width of the column.

Tapered motifs are often used in lace designs.

# Line Types

## Running, Double and Triple Stitches

Set Running Stitch / from 0.3-12mm in 0.1mm steps. Set Double /, Double Zigzag / and Triple / stitch to any length from 1mm to 12mm.

Running may also be set to cutwork needles.

Double Zigzag is a special stitch type, recommended for lace. A running stitch line is retraced in a zigzag pattern to create a mesh.

### Motif Line

Motif lines *f* are lines of the chosen Universal or machine motif patterns.

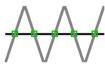

## Satin Line

Create Satin lines where a line or border of satin stitches of constant width is desired. The line will be created along the center of the chosen line.

## Single Stitch

Single stitches are embroidered at whatever length they are created. Alternatively, if you select to Break Up into Smaller Stitches they will be broken up into stitches of Running Stitch at any length from 1mm to 12mm.

Single stitches cannot be converted to any other line type.

# **Edit Lines and Areas**

The shape of a line or area can be changed in the Object window by moving the points that define its outline.

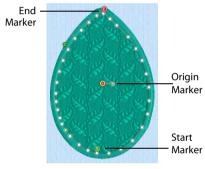

Move the pointer until the desired area is highlighted then click to select it on the work area. When the desired line or area is selected, its points can be moved. The points are shown as small circles or squares.

Square points are used for straight sections and corners. Round points are used for curves.

Objects such as fill areas, running stitch and satin lines, can have any number of points, and points may be inserted and deleted, allowing greater control over their shapes. The start and end points for fill and satin areas

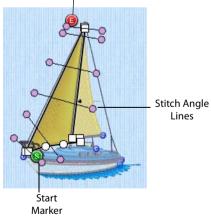

can be changed, typically to reduce the need for trimming. Satin areas have angle lines that are used to control the satin angle.

Fill areas have as many points as needed to define their outlines, and also have moveable start, end and origin markers

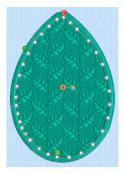

Satin areas have moveable start and end markers and adjustable stitch angle lines

## **Move Points**

The points that define the currently selected stitch object (satin column, fill area, running stitch, etc.) are shown as small squares and circles.

The object type is shown in the Edit Properties area of the Object tab. The points used to start and end fill and satin areas are shown by the start (a) and end (a) markers. Some types of fill areas also have an origin, marked by an orange circle (a), or for Pattern Fill an orange circle with a handle (a) - a. Satin areas also have stitch angle lines with hexagonal ends.

Move the pointer until the desired area is highlighted, then click it on the work area. When selecting an object, click near one of the points that define it.

Once the points are shown, click and drag the squares or circles to move them. The first point is shared with the previous object, and last point is shared with the next object, so moving these will also change the shape of those objects.

When a different point is selected for the start or end of a fill or satin area, a movement stitch (trim) may be added to prevent the previous or next object changing shape.

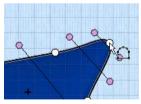

Moving the points that define a satin area may also affect the stitch angle lines, but moving the stitch angle lines does not affect the shape of a satin area.

# Make Lines Straight or Curved

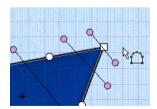

The outlines defining most types of lines and areas can have both curved and straight sections:

To have any curves, lines must be defined by at least four points. The first point of a fill or satin area is always a 'corner' (square) point. The first and last pair of points for a column are always square.

To change a curve (round) point to a square point, hold down the Ctrl key and click the point without moving it. When adjacent points are corners, the line between them will be straight. This is useful if, for instance, a point was not added as a corner at the desired place on a fill area or stitch line.

Point is a curve

Point is a corner after Ctrl + click

To change a corner point to a curve (round) point, simply click the point without moving it. There must be at least two round points next to each other to make the lines curved, so if there is one round point between two square points then the lines to the round point will be straight.

If a line does not have enough points to make the desired section curved, use Insert Points K to add an extra point to use for the curve.

# Move the Start and End Points for Areas

The start and end points for fill and satin areas are shown by circular markers. The start marker (3) is on the inside of the object, and the end marker (3) is on the outside of the object.

Click and drag the desired marker. Move the marker to the point that you wish to use as the new start or end point of the area. Drop at the desired point and the position of the marker will change.

The marker snaps to the nearest point on the edge of the object. If an area does not have a point in the desired position, use Insert Points  $\mathcal{A}$  to add an extra point.

# Move the Origin for Areas

Some types of fill areas have an origin, marked by a orange circle (a). This is used to move the center point for Radial fill, Spiral fill and Shape fill types, or the start point for the pattern in a Pattern Fill. For Pattern Fill, the origin marker also has an adjustment handle to set the angle of the pattern ().

This means you can control how the pattern is repeated in a pattern fill area. For Radial fill, Spiral fill and Shape fill areas, the origin can be moved. This sets the start point for the fill, such as the point from which stitches radiate on a Radial fill.

Use Align Origin Handles 🔧 to align the origin for multiple fill areas.

# Change the Stitch Angle for Satin Areas

Satin areas have stitch angle lines that show and adjust the angle of the stitches across the area. The stitch angle lines have pink handles at each end that are used to adjust each line individually.

Click and drag the desired pink handle. Drop at the desired point and the position of the angle line will change. If the line does not move, this is because the new end point is not usable. This will happen if, for example, you attempt to force two angle lines to cross each other within the area.

## **Delete Angle Lines**

To delete angle lines, click Delete Points 💥 then click the hexagon at either end of the line to be deleted. Right-click when you have finished deleting angle lines and/or points.

A satin area must have at least one angle line. Therefore, the last angle line may not be deleted.

# Nodes

## **Insert Points**

Use Insert Points 🧝 to add a new point to the currently selected line.

Points may be inserted into all line and area types. They may also be inserted into MultiWave lines. Click the Insert Points icon  $\mathcal{K}$ , then click the position on the selected object where you want to add the point.

A pair of points is inserted when Insert Points is used on a column.

Shortcuts

- Object Tab, Nodes:
- Keys: Alt, O, I

## Change the Shape of the Bumblebee's Wing

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Move the pointer until the upper wing is highlighted, then click to select it.
- 6 Zoom in ⊕ so you can see the points with space between them.
- 7 Click the Insert Points icon A<sup>C</sup>, The pointer changes to the add points pointer k₀. The Insert Points icon is only available for objects that can have points inserted.
- 8 Click an empty place along the line defining the outline of the wing. A new round point is inserted, and the wing changes slightly.
- 9 Click to place a point well outside the area of the wing. The fill area changes to include the new point.
- 10 Click to place any further desired points.
- 11 Right-click to deselect Insert Points. The Object Select pointer reappears.
- 12 Click and drag to move any of the points in the wing to further alter its shape.
- 13 If desired, click the Insert Points icon 🕰 again and repeat.
- 14 Close without saving.

# **Delete Points**

Use Delete Points 💥 to delete points from the currently selected line.

Points may be deleted from all line and area types. Points may also be deleted from MultiWave lines. Click the Delete Points icon **\***, then click the points on the selected object that you want to delete. Stitch angle lines can be removed from satin areas by clicking the hexagonal control point at either end of the line. Right-click to finish.

You may not delete all the points for an object. A fill or satin area must have at least three points. Satin border, motif lines and running, double and triple stitch lines must have at least two points. A satin area must also have at least one angle line.

#### Shortcuts

- Object Tab, Nodes: X<sup>\*</sup>
- Keys: Alt, O, DP

## Remove Points from the Wing Outline

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 🛐.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer.
- 5 Move the pointer until the upper wing is highlighted, then click to select it.
- 6 Zoom in ⊕ so you can see the points with space between them.
- 7 Click the Delete Points icon ¥<sup>\*</sup>. The pointer changes to the delete points pointer k=. The Delete Points icon is only available for objects that can have points deleted.
- 8 Click the points you wish to delete. They are removed and the wing changes shape accordingly. You cannot remove the Start and End points for an object.

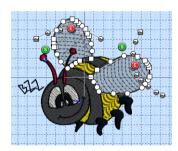

To remove an angle line for a satin area, click the triangular control point at either end of the line.

- 9 Right-click to deselect the function.
- 10 Click and drag to move any of the points in the object to alter its shape.
- 11 If desired, click the Delete Points icon 💥 again and repeat.
- 12 Close without saving.

# **MultiWave Lines**

## Freehand Tablet MultiWave Line

Use Freehand Tablet MultiWave Line 🖉 to draw a line that shapes the wave patterns in a MultiWave Fill.

MultiWave Fill areas, using two MultiWave Lines to shape the flow of the fill within the wings. See "Change Bumblebee Wings to MultiWave Fill with a MultiWave Line" on page 214.

MultiWave Fill, using a short MultiWave Line to add texture to an embroidery

Use a long line to position the stitch lines in an embroidery, or use a short line to add texture to the stitching. The lines do not have to be within the fill area, however they should not cross each other. Vary the density or use a motif to change the effect.

#### Shortcuts

- Object Tab; MultiWave Lines: *I*
- Keys: Alt, O, ML, FT

## Draw a MultiWave Line on a MultiWave Fill Area

- 1 With a MultiWave Fill area selected, click the Freehand Tablet MultiWave Line 🖉 icon.
- 2 Draw a line over or near the selected area. The MultiWave line will appear on the fill, with the first and last points as a squares. The other points will be circles if the line is curved, and square if the line is straight. The wave patterns in the fill will follow this line.

You can move points after the line has been created. To add or remove points, use Insert Point  $\mathbb{X}_{0}^{d}$  or Delete Point  $\mathbb{X}_{0}^{d}$ .

3 Repeat to place as many MultiWave lines as desired.

Use Delete MultiWave Line 💥 to remove a MultiWave line. See "Delete MultiWave Line" on page 190.

## Freehand Point MultiWave Line

Use Freehand Point MultiWave Line *s* to place points to form a line that shapes the wave patterns in a MultiWave Fill.

#### Shortcuts

- Object Tab; MultiWave Lines:
- Keys: Alt, O, ML, FP

## Place Points for a MultiWave Line on a MultiWave Fill

- 1 With a MultiWave Fill area selected, click the Freehand Point MultiWave Line ≶ icon.
- Click to place your first point.
   The point appears automatically as a small hollow yellow square.
- Click to place a second point.
   The new point is a yellow circle, the first point is now white.
   Yellow is used for the most recently placed point.
- 4 Continue placing points along the desired path. Curved lines are created automatically. For corners and straight sections, hold down the Ctrl key.
- 5 Right-click to end the line. The MultiWave line will appear on the fill, and the wave patterns in the fill will follow this line.

You can move points after the line has been created. To add or remove points, use Insert Point  $\mathbb{X}_{0}^{d}$  or Delete Point  $\mathbb{X}_{0}^{d}$ .

6 Repeat to place as many MultiWave lines as desired.

Use Delete MultiWave Line 💥 to remove a MultiWave line. See "Delete MultiWave Line" on page 190.

## Delete MultiWave Line

Use Delete MultiWave Line 💥 to delete one or more MultiWave lines from the currently selected MultiWave Fill area. Click the square (node point) at either end of the line to be deleted. Right-click when you have finished deleting MultiWave lines.

#### Shortcuts

- Object Tab; MultiWave Lines: X
- Keys: Alt, O, DM

## Remove a MultiWave Line

- 1 With a MultiWave Fill area selected containing one or more MultiWave lines, click the Delete MultiWave Line icon XX.
- 2 Click a node point (square or circle) on the line you wish to delete. The MultiWave line will be deleted.
- 3 Right-click to deselect the function.
- 4 If desired, click the Delete MultiWave Line icon 💥 again and repeat.

# **Modify Object**

## **Remove Underlying Stitches**

Use Remove Underlying Stitches **m** to remove all visible stitches within the area of the selected object, excluding stitches in the object itself, and those stitched out after it.

Use Remove Underlying Stitches to remove the packing stitches under a fill before converting it to a lightly stitched fill such as MultiWave Fill.

See "Change Bumblebee Wings to MultiWave Fill with a MultiWave Line" on page 214. Remove Underlying Stitches can be used to remove existing underlying stitches before adding new underlay.

#### Shortcuts

- Object Tab; Modify Object:
- Keys: Alt, O, R

## Align Origin Handles

Use Align Origin Handles 🔧 to align the patterns or focal points of multiple fill areas. It places the orange origin 🔞 handles of the fill areas in the same position as the handle of the object that is last in the stitching order.

Align Origin Handles is useful when aligning fill patterns for Pattern Fill or focal points for Shape, Radial and Spiral Fill.

#### Shortcuts

- Object Tab; Modify Object: 遇
- Keys: Alt, O, A

## Align the Stitching in Bumblebee Wings

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer.
- 5 Move the pointer until the upper wing is highlighted, then click to select it.
- 6 In the Modify Object area, click Remove Underlying Stitches <a>[m]</a>.
- 7 Then click the lower wing to select it and click Remove Underlying Stitches a The end stitch number in the Control Strip is now lower.

Remove Underlying Stitches removes any underlay stitches, or other stitches, under a fill area. This will enable you to see the stitch lines in the Spiral Fill you are about to create clearly.

- 8 Select the upper wing, then use Ctrl + click to select the lower wing.
- 9 In the Convert drop-down list, select "Pattern Fill to Spiral Fill". The Spiral Fill properties dialog box appears.
- 10 In the Options tab, set Density to 15 and click OK. The bumblebee's wings now use spiral fill.
- 11 Click Align Origin Handles to align the origin handles for the selected areas.
- 12 Move the orange origin handle (1) above the lower wing. The spiral pattern for both areas follows the origin point.

# Display

## Show Only Object

Use Show Only Object 📜 to move the handles on the slider bar so that only the selected object can be seen.

## Select a Racket Handle

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Racket' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer.
- 5 Look at the Control Strip. All of the colors in the embroidery can be seen, and the stitch count is over 1500.
- 6 Move the pointer over the racket handle until its points appear, then click to select it. The points defining the handle appear.
- 7 Click Show Only Object <sup>1</sup>/<sub>4</sub>. Only the handle of the racket can now be seen. Only the stitches in the handle are selected.
- 8 Click Ghost Mode *m*. You can now see the rest of the stitches in pale colors. Using Ghost Mode enables you to work with part of the embroidery, without affecting other parts.

#### Shortcuts

- Object Tab; Display: <sup>1</sup>/<sub>15</sub>
- Keys: Alt, O, S

# Stitch Types and Properties

# Stitch Type

You can change the properties for many line and fill types using the Object tab.

Select a line or area and click Properties. The properties dialog box for that stitch type will appear. Alternatively, convert it to another line or fill type, then change its properties.

# Fills

You can use Convert to change between the Fill stitch types:

- Pattern Fill
- Motif Fill
- Crosshatch Fill
- Curved Crosshatch Fill
- MultiWave Fill
- Shape Fill
- Radial Fill
- Spiral Fill
- QuiltStipple Fill
- Contour Fill
- Echo Fill

You can also convert to Satin Area.

# Pattern Fill

A pattern fill area is an area of stitching where the threads all lie parallel to each other, and that has stitch points inserted to create different types of patterns. The density and color can also be changed with single gradient density and multigradient density.

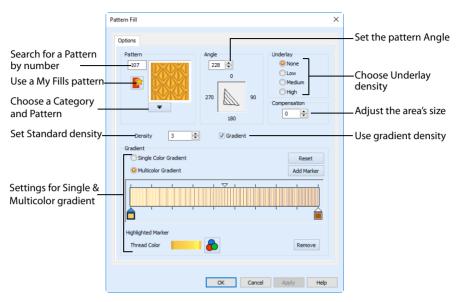

Add new patterns using Manage My Fills in PREMIER+<sup>™</sup> 2 Create (if PREMIER+<sup>™</sup> 2 ULTRA is owned).

The patterns may be simple textures or decorative shapes. A satin-effect pattern (pattern number 36 in Standard 3) is also available.

Pattern Fill Area with Pattern 107 from Diamonds Constant density creates a uniform fill at the chosen density. Gradient density creates a fill with varying density or color.

Use the Pattern Fill properties dialog box to change the pattern, density and stitch angle used for fill areas.

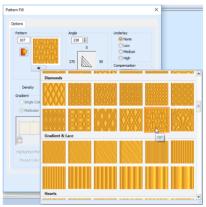

## Pattern Fill — Pattern

Use the Pattern area to select the desired pattern category and number.

Select the desired pattern number. There are several ways to select patterns:

- Click the drop-down arrow below the pattern sample and scroll down to choose a pattern Category, and a pattern. Click the desired pattern sample and the Pattern number is shown.
- Enter a favorite Pattern number directly in the Pattern box. As you type the number, the correct pattern sample is selected immediately.

- Use a My Fill pattern created with Manage My Fills in PREMIER+<sup>™</sup> 2 Create (if PREMIER+<sup>™</sup> 2 ULTRA is owned).
- View the patterns in the Pattern Gallery. See "Fill and Satin Patterns" on page 248.

## Add a Pattern to a Bumblebee Stripe

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.

- 4 Click the Object tab. The pointer changes to the Object Select All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Move the pointer until the lower part of the middle yellow stripe on the bumblebee is highlighted, then click to select it.

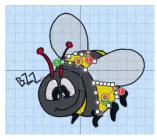

Notice the Pattern Fill icon in the Edit Properties area. If other parts of stitching, such as lines, are selected, the icon for their stitch type will appear. Click again to select the desired area.

6 Hold down Ctrl and click to select the upper part of the yellow stripe.

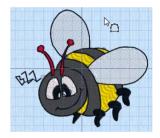

The points defining most of the striped areas appear, together with the colored fill pattern origin ()—) marker, and start () and end () points.

The front and back stripes are too small to show a pattern, therefore do not select them.

- 7 In Edit Properties, click the Properties button. The Pattern Fill properties dialog box appears. The Pattern Fill properties dialog enables you to set the properties for the pattern fill.
- 8 The fill pattern is currently set to Pattern 3. Click the drop-down arrow below the sample and in the Patterns gallery scroll down to 'Waves 1' in the list.
- 9 Click the pattern sample in row 1, column 2. The pattern number will change to 230. Patterns may also be selected directly by entering the desired pattern number in the Pattern box.
- 10 Click OK to see the new pattern in the bumblebee stripe.
- 11 Click outside the bumblebee to see the pattern clearly.

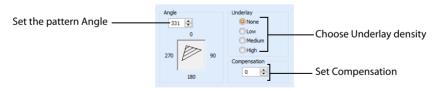

## Pattern Fill — Options

Use the Options area to see and change the settings for fill angle, underlay and compensation.

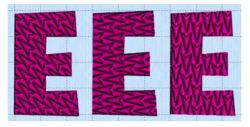

## Angle

The angle of the fill pattern, as shown by the arrow. The thread is at a right angle to the fill pattern. Set the Angle from 0 to 359 degrees. The initial setting is 0.

Alternatively, adjust the angle of the fill pattern with the handle on the Origin marker 0.

The fill angle will also affect the orientation of the gradient.

The example shows pattern number 56 with the fill angle set to 315, 270 and 180 degrees.

## Underlay

Choose from None, Low, Medium or High density underlay. Underlay is a low density fill that is perpendicular to the stitches of the actual fill area. Underlay is useful for stabilizing large fill areas. Underlay is initially set to Low.

Underlay stitches are not generated for areas using gradient density, although the property can be selected in case you switch the area back to a standard density area.

## Compensation

Compensation is used to make an area 'bolder' by increasing its relative size. Set Compensation from 0 to 20. The higher the number, the bolder the area appears. The initial setting is 0.

## Pattern Fill — Density

Use the Density area to see and change the density settings and the color Gradient of the fill.

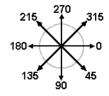

The color on a fill area can change over a range, or have multiple color changes across the fill. This is ideal for gradual color changes such as sunsets, subtle shadow effects and so on.

Gradient is not initially selected.

Embroidery on thicker fabrics usually looks better with more stitch coverage, or a low density setting. Choose a low value such as 2 or 3 for heavy knit fabrics, a higher value such as 5 or 6 for a light material like linen or satin.

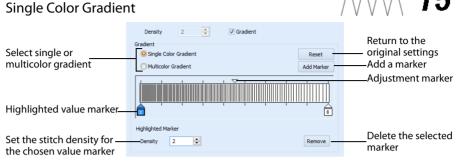

## Standard Density

Density 2 🖨 Gradient

Set the standard Density from 2 to 80. The lower the number, the closer together the stitches and the more stitches are produced.

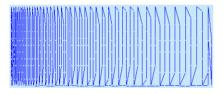

The initial setting is 2.

Use Single Color Gradient to change the density across a fill with only one color. Set a value for the start and end density markers for the fill, and the density gradually changes between the two values. Add multiple markers for a more complex pattern.

The markers can each take a value of 2 to 80, which means you can reverse the gradient simply by swapping the start and end values.

The example shows a Gradient of 2 to 15, with a fill angle of 90°.

Use Density Gradient for loosely stitched areas so that the traveling stitches will go around the outside of the fill area. Set the start and end densities to the same number. If the Density Gradient option was not used the traveling stitches would cross the fill area and show through.

Use the adjustment marker above the gradient bar to change the gradient across the fill.

#### Reset

Reset your changes and use the initial settings.

### Add Marker

Click Add Marker to add a value marker below the gradient bar, and an adjustment marker above the gradient bar. The initial value for the marker will be between the existing markers. Edit the density value, and move the value and adjustment markers as desired.

This means that you can have any combination of density values across the fill area. Remember, a higher value means the fill is less dense.

### Density

Density is used to change the density of the stitching. Set Density from 2 to 80. The higher the number, the less dense the fill. The initial start marker setting is 2, and end marker setting is 8.

### Remove

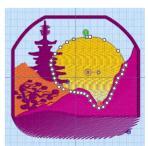

Click Remove to delete the highlighted marker.

## Use Single Gradient Fill on a Landscape Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert 37.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'SunsetGarmentBagOriginal' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select <sup>1</sup>G<sup>2</sup> pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Move the pointer until the sun is highlighted, and click to select it.

Notice the Pattern Fill icon in the Edit Properties area. If other parts of stitching, such as lines, are selected, the icon for their stitch type will appear. Click again to select the desired area.

- 6 In Edit Properties, click the Properties button. The Pattern Fill properties dialog box appears.
- 7 Click (check) the Gradient checkbox. The Gradient box will become available.
- 8 Select Single Color Gradient.
- 9 In the Gradient area, ensure that the value marker on the left below the gradient bar is selected.
- 10 Click the value marker and change the value in the Density box to 2.
- 11 Click the value marker on the right below the gradient bar and change the value in the Density box to 40.
- 12 Click OK to view your changes.
- **13** With the sun still selected, click Properties again to open the Pattern Fill dialog box.
- 14 Move the adjustment marker above the gradient bar to vary the change in density across the fill.
- **15** Click OK to view your changes as desired. Open the dialog box again to make further changes.
- 16 Click Add Marker to add another value marker and adjustment marker.

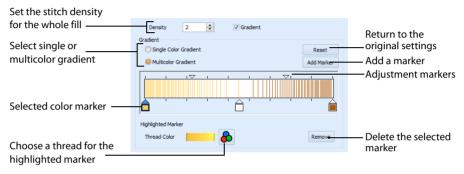

#### 17 Change the density of the fill as desired.

Gradient	
Single Color Gradient	Reset
O Multicolor Gradient	Add Marker
	1 3 1
Highlighted Marker	
Density 2	Remove

18 Click OK to close the properties dialog box.

## **Multicolor Gradient**

Gradient

Use Multicolor Gradient to change the color across a fill with only one density. Set colors for the start and end markers for the fill, and the color gradually changes between the two values.

Use the marker above the gradient bar to change the color gradient across the fill.

#### Reset

Reset your changes and use the initial settings.

## Add Marker

Click Add Marker to add a color marker below the gradient bar, and an adjustment marker above the gradient bar. The initial color for the marker will be the same as the currently highlighted marker. Change the color and move the color and adjustment markers as desired. This means that you can have any combination of colors across the fill area.

### Thread Color

Use Thread Color local to change the color of the currently highlighted marker. The Color Selection box will be displayed.

See "Change an Existing Thread Color" on page 33.

#### Remove

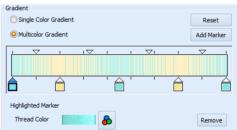

Click Remove to delete the highlighted marker.

## Use a Multicolor Gradient Fill

- 1 Open an embroidery.
- 2 Click the Object tab. The pointer changes to the Object Select C pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 3 Click to select the an area of pattern fill in the embroidery.

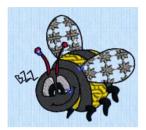

Notice the Pattern Fill icon in the Edit Properties area. If other parts of stitching, such as lines, are selected, the icon for their stitch type will appear. Click again to select the desired area.

- 4 In Edit Properties, click the Properties button. The Pattern Fill properties dialog box appears.
- 5 Click the Gradient option. The Gradient box will become available.
- 6 Select Multicolor Gradient.
- 7 Click a color marker (the marker below the gradient bar) and click the button to the right of the Thread Color to open the Color Selection dialog box. See "Change an Existing Thread Color" on page 33.
- 8 Change the color to the required color and click OK.
- 9 Move the adjustment marker above the gradient bar to vary the change in color across the fill.
- **10** Click Add Marker to add another color marker and adjustment marker.
- 11 Change the color of the fill as desired.
- 12 Click OK to close the properties dialog box.

# **Motif Fill**

Motif fill areas contain repeated small stitches placed using one of the Universal or machine motif patterns. Motif patterns typically have spaces between the stitches. The motifs can be at any angle and at different sizes, and different motifs can be used on alternating lines.

The bumblebee wings use a Motif Fill Area with motif 44 from Candlewicking 1

## Motif Fill — Motif 1

The Motif Fill properties dialog box has tabs for setting all the properties on a motif fill area.

	Motif Fill	
	Motif 1 Motif 2 Spacing Options Motif Group Universal Category General Motifs 1	
Select a motif Group, Category and pattern —	Pattern 5 ~	
Select the motif size	Height 8.0 mm Proportional 🖉	
Flip the motif vertically or horizontally	Reverse Mirror	
Preserve motif Height / Width ratio		
	OK Cancel Apply	Help

The Motif 1 tab is always shown first when the Motif Fill properties dialog box appears. Use Motif 1 to select the first motif and its size.

### Motif

Use Motif to select the first motif and its size.

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

#### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

### Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

#### Reverse

Use this option to reverse the direction of the motif along the lines of the motif fill. Some motifs are symmetrical and will have no apparent change when they are reversed.

#### Mirror

Use this option to mirror the motif across the line of motif fill. Some motifs are symmetrical and will have no apparent change when they are mirrored.

## Motif Fill — Motif 2

Motif Fill	×

Category General Motifs 1 V	
Pattern 5 ~	
Height 8.0 mm + Propo	ortional 🔽
Reverse Mirror	
OK	Cancel Apply Help

Use Motif 2 to select a second optional motif and its size.

## Use Motif 2

Select this option to use a second motif in the motif fill. The second motif will be placed on alternating lines with the first motif.

### Motif

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

#### Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

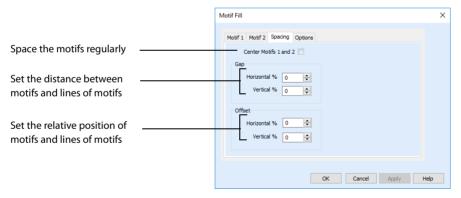

#### Reverse

Use this option to reverse the direction of the motif along the lines of the motif fill. Some motifs are symmetrical and will have no apparent change when they are reversed.

#### Mirror

Use this option to mirror the motif across the line of motif fill. Some motifs are symmetrical and will have no apparent change when they are mirrored.

# Motif Fill — Spacing

## Center Motifs 1 and 2

When this option is selected the narrower of the two motifs has extra stitches added at either side to make it the same width as the wider motif. This is so that the motifs can be centered, or so the horizontal offset between them will remain constant.

#### Gap

The Horizontal gap adds or removes space between motifs along the line. The Vertical gap adds or removes space between lines of motifs.

Set the Horizontal and Vertical gap from -50% to +100%.

## Offset

The Horizontal offset moves the motifs along each line, relative to the previous line. The Vertical offset adjusts the position of every other line of motifs, so that it is nearer to one line than the next or previous line.

Set the Horizontal and Vertical offset from -50% to 50%.

The offset is limited to 50% each way because, for instance, a 75% offset would be the same as a -25% offset.

## Motif Fill — Options

Use the Options tab to see and change the settings for fill angle, stitch type and length.

	Motif Fill	×
Adjust the motif angle	Motif 1 Motif 2 Spading Options Angle 0 270 90 180	
Select a line type	Stitch Running Triple Length 2.0 mm 🜩	
Set the stitch length		
	OK Cancel Apply Help	)

### Angle

The angle of the motif fill pattern, as shown by the arrow. Set the Angle from 0 to 359 degrees.

## Stitch

Select Running or Triple stitch for stitching out the motifs. Set the maximum stitch Length from 1 to 12mm in steps of 0.1mm.

# **Crosshatch Fill**

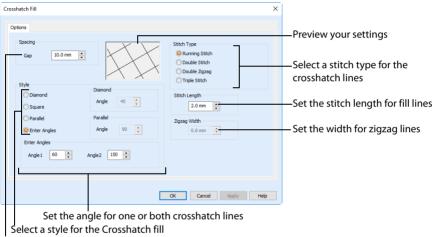

Crosshatch fills are used in quilting, and to create free-standing lace.

The bumblebee wings are in Crosshatch Fill, using Enter Angles style and Angles of 60 and 150 degrees.

# **Crosshatch Fill Properties**

The Crosshatch Fill properties dialog box enables you to set the gap, style, line angle, stitch type and stitch length for the crosshatched lines of stitching in the fill. The preview changes according to the options chosen.

Adjust the gap between the stitch lines

## Spacing

Set the Gap to the preferred distance between lines of stitching.

Set the Gap from 1mm to 20mm in steps of 0.1mm. It is initially set to 5mm.

### Style

Choose from Diamond, Square, Parallel and Enter Angles. Diamond is selected by default, and creates a symmetrical crosshatch pattern (balanced horizontally). Choose Enter Angles to create an asymmetrical crosshatch pattern, if desired.

#### Diamond

Enter an Angle for the Diamond fill. The Angle is initially set to 45 degrees.

#### Square

There are no additional options for the Square fill which creates a crosshatch pattern of lines set at 90 degrees.

#### Parallel

Enter an Angle for the Parallel fill. The Angle is initially set to 90 degrees.

The Pattern Fills 257 to 264 provide banded fill patterns that combine with crosshatch parallel fills to create a weave effect. Set Spacing for the parallel fill at 2.4mm to combine with Pattern 257, 2.8mm to combine with Pattern 258, and so on.

#### **Enter Angles**

Enter an angle for each of the two line directions in the crosshatch. Angle1 is initially set to the same angle as the Diamond style previously used, and Angle2 is initially set to this angle plus 90 degrees.

### Stitch Type

Select a stitch type for the crosshatch fill. Choose from:

- Running Stitch
- Double Stitch
- Double Zigzag
- Triple Stitch

### Stitch Length

Set the Stitch Length from 1 to 12mm in steps of 0.1mm. The initial setting is 2.0mm.

## Zigzag Width

Set the Zigzag width for Double Zigzag stitch from 0.1 to 6mm in steps of 0.1mm. The initial setting is 0.6mm.

Double Zigzag is a special stitch type, recommended for lace. A running stitch line is retraced in a zigzag pattern to create a mesh. After embroidering on water soluble stabilizer, the mesh of stitches provides strength when the stabilizer is washed away.

# **Curved Crosshatch Fill**

Curved Crosshatch fills use curving lines in the crosshatch, which can be used to create a feeling of depth. They are used in quilting, and to create free-standing lace.

The bumblebee wings are in Curved Crosshatch Fill, using Square style and a Gap of 4.0mm.

# **Curved Crosshatch Fill Properties**

The Curved Crosshatch Fill properties dialog box enables you to set the curve, gap, style, line angle, stitch type and stitch length for the curved crosshatched lines of stitching in the fill.

Curved Crosshatch Fill		×	
Curved Crosshatch Fill Options Modif Gap Gap 4.0 mm Curved Crosshatch Lines 1	Style Diamond Square Parallel Enter Angles Enter Angles	Diamond Angle 45 0 Paralle Angle 90 0	Use a Motif with the fill Select a style for the Curved Crosshatch fill Set the angle for one or both curved crosshatch lines

			•

Set the curve for the curved crosshatch lines Adjust the gap between the stitch lines

You can also change the curves in the crosshatch lines using the handles in the work area.

## Spacing

Set the Gap to the preferred distance between lines of stitching.

Set the Gap from 1mm to 20mm in steps of 0.1mm. It is initially set to 5mm.

## Style

Choose from Diamond, Square, Parallel and Enter Angles. Diamond is selected by default, and creates a symmetrical crosshatch pattern (balanced horizontally). Choose Enter Angles to create an asymmetrical crosshatch pattern, if desired.

#### Diamond

Enter an Angle for the Diamond fill. The Angle is initially set to 45 degrees.

#### Square

There are no additional options for the Square fill which creates a crosshatch pattern of lines set at 90 degrees.

#### Parallel

Enter an Angle for the Parallel fill. The Angle is initially set to 90 degrees.

The Pattern Fills 257 to 264 provide banded fill patterns that combine with crosshatch parallel fills to create a weave effect. Set Spacing for the parallel fill at 2.4mm to combine with Pattern 257, 2.8mm to combine with Pattern 258, and so on.

#### **Enter Angles**

Enter an angle for each of the two line directions in the crosshatch. Angle1 is initially set to the same angle as the Diamond style previously used, and Angle2 is initially set to this angle plus 90 degrees.

### Stitch Type

Select a stitch type for the curved crosshatch fill. Choose from:

- Running Stitch
- Double Stitch
- Triple Stitch
- Motif Line

### Stitch Length

Set the Stitch Length from 1 to 12mm in steps of 0.1mm. The initial setting is 2.0mm.

## **Curved Crosshatch**

Use Lines 1 and 2 to change the curve on the crosshatch lines.

You can also change the curves in the crosshatch lines using the handles in the work area.

Lines 1

Change the position of the origin for one of the sets of curved lines.

Set percentage Curve In and Curve Out from -100 to 100. The initial setting for Curve In % and for Curve Out % is 50.

Lines 2

Change the position of the origin for the other set of curved lines.

Set percentage Curve In and Curve Out from -100 to 100. The initial setting for Curve In % and for Curve Out % is 50.

# Curved Crosshatch Fill — Motif

The selected Motif is only used by the Curved Crosshatch Fill if the Motif Line option is selected on the Options tab.

Curved Crosshatch Fill X

	<ul> <li>Select a stitch type for the motif lines</li> </ul>
OK Cancel Apply Help	

## Motif

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

#### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

#### Minimum Gap

The Minimum Gap is the minimum amount of extra stitching that is placed between the motifs along the line. This is in addition to any spacing that is part of the selected motif.

#### Fit Motif To Line

Select this option to make the shape of the motifs follow the curves of the line.

When Fit To Line is off, the ends of each motif are placed on the line.

When Fit To Line is on, each motif is adjusted to fit along the line.

#### Reverse

Use this option to reverse the direction of the motif along the line. Some motifs are symmetrical and will have no apparent change when they are reversed.

#### Kern

Use Kern to automatically increase the space between adjacent motifs where necessary, so that the motifs fit along the line without overlapping.

#### Mirror

Use this option to mirror the motif across the line of motif fill. Some motifs are symmetrical and will have no apparent change when they are mirrored.

## Size

## Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

## Stitch

Select Running or Triple stitch for stitching out the motifs. Set the maximum stitch Length from 1 to 12mm in steps of 0.1mm. Length is initially set to the recommended value for each motif.

## Change Bumblebee Wings to Curved Crosshatch Fill

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Click the upper wing to select it. Note the end stitch number in the Control Strip.
- 6 In the Modify Object area, Click Remove Underlying Stitches 🔜. The number of stitches is reduced, as shown by a lower end stitch number in the Control Strip.
- 7 Click the lower wing to select it, then click Remove Underlying Stitches 🔚. The number of stitches drops again.

Remove Underlying Stitches removes any underlay stitches, or other stitches, under a fill area. The wings are Pattern Fill, which uses an underlay. With Curved Crosshatch Fill the fabric should be visible underneath the lines of stitching.

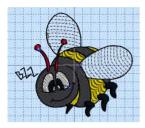

- 8 Use Ctrl + click to select both wings.
- 9 In the Convert drop-down menu select "Pattern Fill to Curved Crosshatch Fill". The Curved Crosshatch Fill properties dialog box appears.
- **10** In the Curved Crosshatch area, note the settings for Lines 1 and Lines 2.
- 11 In Spacing, set the Gap to 4.0mm.
- 12 Click OK to close the dialog box.
- **13** With the wings still selected, move the pink handles for the wings. This changes the curve on the lines in the fills.
- 14 Ensure that both wings are still selected, then right-click and select Edit Curved Crosshatch Fill in the context menu.
- **15** Look at the settings in the Curved Crosshatch area. They have changed. You can change the curve on the crosshatch lines with the handles, or with the Lines 1 and Lines 2 settings.
- 16 In Stitch Type, select Motif Line.
- 17 Click the Motif tab.
- **18** Set the Motif Group to Universal and the Category to Hand Stitches 1.
- 19 Set the Pattern to 6.
- 20 With Proportional selected (checked), set Height to 1.8mm.
- 21 Click OK to close the dialog box. The lines on the wings now use the motif.
- 22 Click outside the bumblebee to deselect the wings.

# MultiWave Fill

MultiWave fill areas use a wave pattern defined by a line, or lines, drawn on the fill area by the designer. Vary the density, or use a motif for the stitch lines.

The bumblebee wings are in MultiWave Fill, using a density of 20

# MultiWave Fill — Options

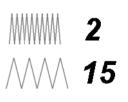

MultiWave Fill	×
MultiWave Fill Options Mot Density Use Mot	Select a motif     Set the stitch line density for the fill     Use a motif line
OK Cancel Apply Help	

#### Density

Set Density from 2 to 40. The lower the number, the closer together the stitches and the more stitches are produced.

Use Motifs

Click Use Motifs if you would prefer to use motifs instead of a plain line to follow the line angle selected for the fill. Click the Motif tab to choose a motif.

# MultiWave Fill — Motif

The selected Motif is only used by the MultiWave Fill if the Use Motifs option is selected on the Options tab.

MultiWave Fill	×

#### Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

## Stitch

Select Running or Triple stitch for stitching out the motifs. Set the maximum stitch Length from 1 to 12mm in steps of 0.1mm. Length is initially set to the recommended value for each motif.

## Change Bumblebee Wings to MultiWave Fill with a MultiWave Line

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Click the upper wing to select it. Note the end stitch number in the Control Strip.
- 6 In the Modify Object area, Click Remove Underlying Stitches . The number of stitches is reduced, as shown by a lower end stitch number in the Control Strip.
- 7 Click the lower wing to select it, then click Remove Underlying Stitches 🔚. The number of stitches drops again.

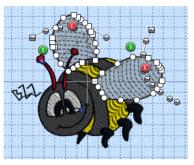

Remove Underlying Stitches removes any underlay stitches, or other stitches, under a fill area. The wings are Pattern Fill, which uses an underlay. With MultiWave Fill the fabric should be visible underneath the lines of stitching.

- 8 Use Ctrl + click to select both wings.
- 9 In the Convert drop-down list click "Pattern Fill to MultiWave Fill". The MultiWave Fill properties dialog box appears.
- 10 Click OK to close the dialog box.

- 11 With the wings still selected, in the MultiWave Line dropdown menu, click Freehand Point MultiWave Line <u>5</u>.
- 12 Starting on the work area to the left of the upper wing, click a series of points to draw a curved line that runs below the top of the wing, but follows its line.
- 13 Right-click to finish the line on the work area to the right of the wing. The node points on the line will be displayed. The stitch lines within the wing will change to follow the direction

- The stitch lines within the wing will change to follow the direction of the line that you drew.
- 14 Ensure that the wings are still selected, and select Freehand Point MultiWave Line 💲 again.
- 15 Starting above and to the right of the lower wing, click a series of points to draw a line that intersects the wing, then curves down and back.
- **16** Right-click to finish the line. The node points on the line will be displayed.

- 17 Adjust the nodes on the two MultiWave lines as desired.
- 18 Click outside the bumblebee to deselect the wings.

# Echo Fill

The bumblebee wings are in Echo Fill using 5 echo lines, a spacing of 2mm, rounded corners, and are embroidered in running stitch.

Echo Fill places echo lines within or around a shape. Choose from rounded, square and diagonal corners, and set the gap between the echo lines and the number of lines, and select the stitch type and length.

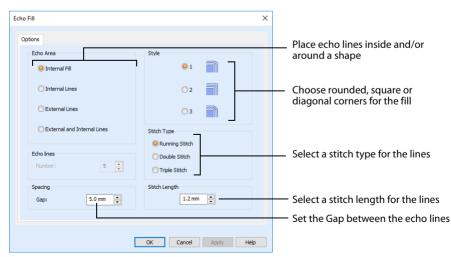

Rounded corners

Square corners

**Diagonal corners** 

# **Echo Fill Properties**

The Echo Fill properties dialog enables you to place echo lines within or around a shape. Set the style, gap, stitch type and stitch length.

## Style

Choose from 1, 2 or 3. For a square shape:

- 1 📄 creates rounded corners
- 2 🗐 creates square corners
- 3 📄 creates diagonal corners

Rounded corners (1) is initially selected.

#### Stitch type

Select a line type for the echo lines in the fill. Choose from:

- Running Stitch
- Double Stitch
- Triple Stitch

#### Spacing

Set the Spacing to the preferred distance between lines of stitching.

Set the Spacing from 2mm to 20mm in steps of 0.1mm. It is initially set to 5mm.

#### Stitch Length

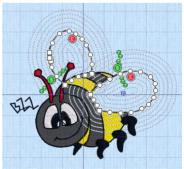

Set the stitch length for the echo lines from 1 to 12mm in 0.1mm steps. The initial setting is 2mm.

# Create Echo Fill Wings for a Bumblebee

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Click the upper wing to select it. Note the end stitch number in the Control Strip.
- 6 In the Modify Object area, Click Remove Underlying Stitches 🔜. The number of stitches is reduced, as shown by a lower end stitch number in the Control Strip.
- 7 Click the lower wing to select it, then click Remove Underlying Stitches . The number of stitches drops again.

Remove Underlying Stitches removes any underlay stitches, or other stitches, under a fill area.

- 8 Use Ctrl + click to select both wings.
- 9 In the Convert drop-down list click "Pattern Fill to Echo Fill". The Echo Fill properties dialog box appears.
- 10 In Echo Area, select External and Internal Lines.
- 11 Ensure that Echo Lines is set to 5.
- 12 Set Spacing to 2mm.
- **13** Click OK to close the dialog.
- 14 Click outside the bumblebee to deselect the wings.

# Shape Fill

Shape fill areas use one of 75 different shapes. Vary the stitch density and use motif lines for the fill.

The bumblebee wings are in Shape Fill using Shape 16 and Density 8

The Shape Fill properties dialog box has tabs for setting all the properties on a shape fill area.

# Shape Fill × Options Motif Select a motif for the fill Density \* Shapes 11 × Select a shape for the fill Use motif lines in the fill Use motif lines in the fill

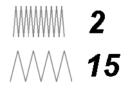

# Shape Fill — Options

#### Density

Set Density from 2 to 40. The lower the number, the closer together the stitches and the more stitches are produced.

#### Shapes

Click the drop-down arrow and select the desired shape from the list.

#### Use Motifs

Click Use Motifs if you would prefer to use motifs instead of a plain line to follow the shape selected for the fill. Click the Motif tab to choose a motif.

# Shape Fill — Motif

The selected Motif is only used by the Shape Fill if the Use Motifs option is selected on the Options tab.

Shape Fill	×

#### Motif

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

#### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

#### Minimum Gap

The Minimum Gap is the minimum amount of extra stitching that is placed between the motifs along the line. This is in addition to any spacing that is part of the selected motif.

#### Fit Motif To Line

Select this option to make the shape of the motifs follow the curves of the line.

When Fit To Line is off, the ends of each motif are placed on the line.

When Fit To Line is on, each motif is adjusted to fit along the line.

#### Reverse

Use this option to reverse the direction of the motif along the line. This is useful, for instance, if you have placed a QuickStitch<sup>™</sup> Motif Line and wish to reverse the motif direction. Some motifs are symmetrical and will have no apparent change when they are reversed.

#### Kern

Use Kern to automatically increase the space between adjacent motifs where necessary, so that the motifs fit along the line without overlapping.

#### Mirror

Use this option to mirror the motif across the line of motif fill. Some motifs are symmetrical and will have no apparent change when they are mirrored.

## Size

#### Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

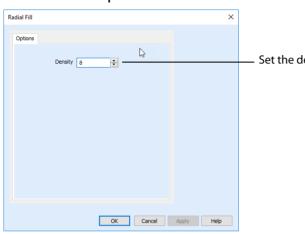

## Stitch

Select Running or Triple stitch for stitching out the motifs. Set the maximum stitch Length from 1 to 12mm in steps of 0.1mm. Length is initially set to the recommended value for each motif.

# **Radial Fill**

Radial fill areas use a pattern of radiating lines from an origin point. The stitch density can be varied.

# Radial Fill — Options

- Set the density from 2 to 40

#### Density

Set Density from 2 to 40. The lower the number, the closer together the stitches and the more stitches are produced.

The initial setting is 20.

///// **2** ///// **15** 

# **Spiral Fill**

Spiral fill areas use a spiral pattern from an origin point. Use constant or gradient density.

The bumblebee wings are in Spiral Fill using Gradient Density

# Spiral Fill — Options

#### Density

The density on a spiral fill area can change over a range, or have multiple density changes from the origin to the edge of the fill. Choose from two density options: Standard and Gradient.

Embroidery on thicker fabrics usually looks better with more stitch coverage, or a low density setting. Choose a low value such as 2 or 3 for heavy knit fabrics, a higher value such as 5 or 6 for a light material like linen or satin.

## Standard Density

Options		— Set the density from 2 to 80
Density	Gradient	Select Gradient fill

Set the standard Density from 2 to 80. The lower the number, the closer together the stitches and the more stitches are produced.

AAAA 45

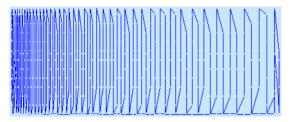

The initial setting is 2.

Gradient Density		
	Spiral Fill	×
	Options	
	Density 6 🗘 🗹 Gradient Gradient	Return to the original settings
	Add Marker	Add a marker Adjustment marker
Highlighted value marker-		, i i i i i i i i i i i i i i i i i i i
Set the stitch density for – the chosen value marker	Highlighted Marker Density 6 Remove	Delete the selected marker
	OK Cancel Apply Hel	lp

Use Gradient Density to change the density across the Spiral Fill. Set a value for the start and end density markers for the fill, and the density gradually changes between the two values. The start value is used at the origin of the spiral fill, and the end value is used at the edge.

The markers can each take a value of 2 to 80, which means you can reverse the gradient simply by swapping the start and end values.

The example shows a Gradient of 2 to 15, with a fill angle of 90°.

Use the marker above the gradient bar to change the gradient across the fill.

## Add Marker

Click Add Marker to add a marker. The initial value for the marker will be between the existing markers. Edit the value and move the marker as desired.

This means that you can have any combination of density values across the fill area. Remember, a higher value means the fill is less dense. The marker furthest to the left affects the spiral fill at the origin, then from left to right to the edge of the spiral fill.

#### Remove

Click Remove to delete the highlighted marker.

## Use Spiral Fill with a Gradient

- Click File, New 1 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>3</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'SunsetGarmentBagOriginal' embroidery.
- Click the Object tab. The pointer changes to the Object Select <sup>1</sup>G pointer.
   All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Click to select the sun.
- 6 In the Convert drop-down list select "Pattern Fill to Spiral Fill". The Spiral Fill properties dialog box appears.

Alternatively, right-click and a context menu appears. Select "Convert from Pattern Fill to Spiral Fill...".

- 7 Click to select the Gradient checkbox. The Gradient area will become available.
- 8 In the Gradient area, ensure that the value marker on the left below the gradient bar is selected.
- 9 Click the value marker and change the value in the Density box to 2.
- 10 Click the value marker below the gradient bar on the right and change the value in the Density box to 8.

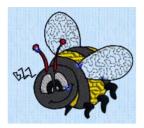

You can move the adjustment marker above the gradient bar to vary the change in density across the fill, and click Add Marker to add another value marker and adjustment marker.

#### 11 Click OK to view your changes.

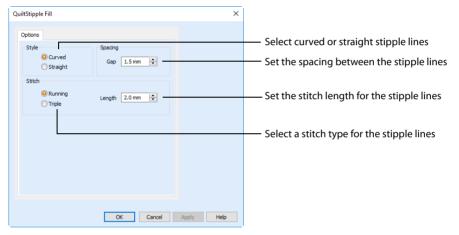

# QuiltStipple Fill

QuiltStipple fill areas use stipple stitch in a curved or straight lines. Vary the gap between stitch lines and use running or triple stitch.

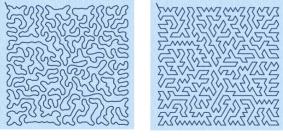

The bumblebee wings are in QuiltStipple Fill using a curved style

# QuiltStipple Fill — Options

#### Style

Choose between curved or straight.

Curved

Straight

#### Spacing

Set the Gap to the preferred distance between lines of stitching. This also, where possible, is the border inside the area, between the edge of the area and the fill pattern.

Set the Gap from 1 to 20mm in steps of 0.1mm. It is initially set to 5.0mm.

#### Stitch

Select Running or Triple stitch for stitching out the fill. Set the Length of stitches from 1 to 12mm in steps of 0.1mm. Length is initially set to 2mm.

# **Contour Fill**

Contour fill areas use contour stitch lines. Vary the gap between stitch lines and the length of the stitches, and use running, double or triple stitch.

The bumblebee wings are in Contour Fill, using Double Stitch and a 1.4mm gap

# Contour Fill — Options

Contour Fill	×	
Options		
Spadng Gap 2.0 mm 🖨		Set the space between the lines in the fill
Stitch Running Double Length 2.0 mm 🗼		Set a stitch length for the contour lines
		——Select a stitch type for the contour lines
OK Cancel	Apply Help	

#### Spacing

Set the Gap to the preferred distance between lines of stitching. This also is the border inside the area, between the edge of the area and the fill pattern.

Set the Gap from 0.2 to 5mm in steps of 0.1mm. It is initially set to 2.0mm.

Stitch

Select Running, Double or Triple stitch for stitching out the fill. Set the Length of stitches from 1 to 12mm in steps of 0.1mm. Length is initially set to 2mm.

## Change Bumblebee Wings to Contour Fill

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch load the 'Bumblebee 2' embroidery.
- 4 Click the Object tab. The pointer changes to the Object Select pointer. All of the icons are unavailable (grayed out) as no area of stitches is selected.
- 5 Click the upper wing to select it. The points defining the wing appear. Note the end stitch number in the Control Strip.

6 In the Modify Object area, Click Remove Underlying Stitches . The number of stitches is reduced, as shown by a lower end

The number of stitches is reduced, as shown by a lower end stitch number in the Control Strip.

7 Click the lower wing to select it, then click Remove Underlying Stitches 2. The number of stitches drops again.

Remove Underlying Stitches removes any underlay stitches, or other stitches, under a fill area. The wings are Pattern Fill, which uses an underlay. With Contour Fill the fabric should be visible underneath the lines of stitchina. You can use Draw Previous Color Block I or Draw Next Color Block I to isolate areas for object editing, or rightclick the color block in the worksheet, and select Show only

8 Use Ctrl + click to select both wings.

this Color.

- 9 In the Convert drop-down list, select "Pattern Fill to Contour Fill". The Contour Fill properties dialog box appears. Alternatively, right-click and a context menu appears. Select "Convert from Pattern Fill to Contour Fill...".
- 10 On the Options tab, set Gap to 1.4mm.
- 11 Click OK. The bumblebee's wings now use contour fill.

# Satin Area

Satin areas contain zigzag stitches that fill the area from one end to the other at the same density. The stitch angle changes with the shape of the area, and can be adjusted as desired. Choose automatic edge walk and/or zigzag underlay.

## Satin Area — Options

Use the Satin Area Options to set pattern, underlay, compensation and density for satin areas.

Satin Area	×
Options Pattern 0 Zgzag Edge Walk	Search for a pattern by number Select an underlay type for the satin
Compensation	Adjust the area's size
Density 4 호 OK Cancel Apply Help	Set the stitch density for the satin Click to use no pattern

## Pattern

Choose from more than 250 patterns for satin (for areas wider than around 8-10mm). Click a pattern sample or enter the Pattern number to select a pattern. Set the Pattern number to 0 for standard satin with no pattern, or click No Pattern **1**. The initial setting is 0.

Add new patterns using Manage My Fills in PREMIER+ $^{\text{m}}$  2 Create (if PREMIER+ $^{\text{m}}$  2 ULTRA is owned). View the patterns in the pattern gallery. See "Fill and Satin Patterns" on page 248.

## Underlay

Set the Underlay option that will be used for the satin area. Zigzag creates zigzag lines of running stitch as underlay. Use zigzag underlay for wide areas of satin. Edge walk places lines of running stitch just inside the edges of the satin areas. Use edge walk when the satin areas have both wide and narrow sections. For very wide areas of satin, select both underlay types.

Zigzag is initially selected.

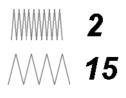

## Compensation

Compensation is used to make an area 'bolder' by increasing its relative size. Set Compensation from 0 to 30. The higher the number, the bolder the area appears.

## Density

Set Density from 2 to 80. The lower the number, the closer together the stitches and the more stitches are produced.

The initial setting is 4.

# Columns

You can use Convert to change between the Column stitch types:

- Satin Column
- Feathered Satin
- Richelieu Bars
- Tapered Motifs

You can also convert to Satin Area, but you cannot convert back to a satin column.

# Satin Column

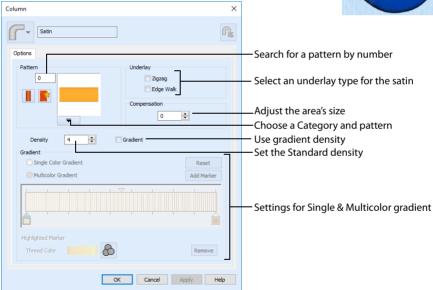

Satin Column forms a column of straight or curving satin.

Satin lines, and satins created using earlier methods such as Straight Satin and Curved Satin, are treated as Satin Column.

## Satin Column Options

Use the Satin Column Options to set underlay, compensation and density.

#### Pattern

Choose from more than 250 patterns for satin (for areas wider than around 8-10mm). Click a pattern sample or enter the Pattern number to select a pattern. Set the Pattern number to 0 for standard satin with no pattern, or click No Pattern **1**. The initial setting is 0.

Add new patterns using Manage My Fills in PREMIER+ $^{\text{m}}$  2 Create (if PREMIER+ $^{\text{m}}$  2 ULTRA is owned). View the patterns in the pattern gallery. See "Fill and Satin Patterns" on page 248.

Patterns should only be used for columns wider than about 8-10 mm.

#### Underlay

Set the Underlay option that will be used for the satin column. Zigzag creates zigzag lines of running stitch as underlay. Use zigzag underlay for wide areas of satin. Edge walk places lines of running stitch just inside the edges of the satin column. Use edge walk when the satin columns have both wide and narrow sections. For very wide satin columns, select both underlay types.

#### Compensation

Compensation is used to make an area 'bolder' by increasing its relative size. Set Compensation from 0 to 30. The higher the number, the bolder the area appears. The initial setting is 0.

#### Standard Density

Set Density from 2 to 80. The lower the number, the closer together the stitches and the more stitches are produced.

MMM 2
∧√√∧ 15

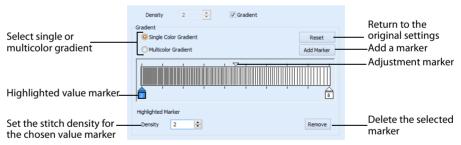

The initial setting is 4.

#### Gradient

Use the Gradient settings to see and change the density settings and the color Gradient of the satin.

The color on a satin column can change over a range, or have multiple color changes across the area. This is ideal for gradual color changes such as subtle shadow effects. Gradient is not initially selected.

#### Single Color Gradient

Use Single Color Gradient to change the density across a satin column with only one color. Set a value for the start and end density markers for the fill, and the density gradually changes between the two values. Add multiple markers for a more complex pattern.

The markers can each take a value of 2 to 80, which means you can reverse the gradient simply by swapping the start and end values.

Use the adjustment marker above the gradient bar to change the gradient across the area.

Use Reset to cancel your changes and use the initial settings.

Click Add Marker to add a value marker below the gradient bar, and an adjustment marker above the gradient bar. The initial value for the marker will be between the existing markers. Edit the density value, and move the value and adjustment markers as desired. This means that you can have any combination of density values across the area. A higher value means the fill is less dense.

Density is used to change the density of the stitching. Set Density from 2 to 80. The higher the number, the less dense the satin. The initial start marker setting is 4, and end marker setting is 4.

Click Remove to delete the highlighted marker.

#### **Multicolor Gradient**

Use Multicolor Gradient to change the color across a satin column with only one density. Set colors for the start and end markers for the area, and the color gradually changes between the two values.

Use the marker above the gradient bar to change the color gradient across the area.

Use Reset to cancel your changes and use the initial settings.

Click Add Marker to add a color marker below the gradient bar, and an adjustment marker above the gradient bar. The initial color for the marker will be the same as the currently highlighted marker. Change the color and move the color and adjustment markers as desired. This means that you can have any combination of colors across the area.

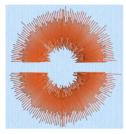

Use Thread Color **&** to change the color of the currently highlighted marker. The Color Selection box will be displayed.

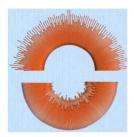

See "Change an Existing Thread Color" on page 33. Click Remove to delete the highlighted marker.

# Feathered Satin

Feathered Satin forms a column of satin that is feathered on one or both sides. A Feathered Satin column uses zigzag stitches where the start and end points of the stitches are random rather than all parallel.

Choose whether one or both sides of the column will be feathered, and set the stitch length and density.

Feather Both Sides

Feather One Side

## Feathered Satin Options

Use the Feathered Satin Options to set density, Feather Type, and Stitch Length.

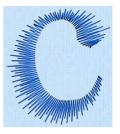

Column	×	
Feathered Satin	R	
Options		
Density Feather Type SideA SideB Stitch Length 30 mm		<ul> <li>Set the density for the feathered satin</li> <li>Select which side of the column to feather</li> <li>Set the length of the feathering stitches</li> </ul>
OK Cancel Apply	Help	

#### Density

Set Density from 2 to 40. The lower the number, the closer together the stitches and the more stitches are produced. The initial setting is 15.

#### Feather Type

#### Stitch Length

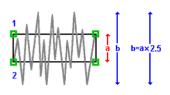

Set the Length of feathering stitches from 2 to 30mm in steps of 1mm. The initial setting is 30mm.

#### Feather Both Sides

Create a satin column with both edges feathered.

The start and end points of the stitches are random rather than all parallel. The final width of the section is 2-2.5 times larger than it is for standard satin, as shown.

The maximum stitch lengths of the feathered satin may be from 2 to 30mm and the satin density may be from 2 to 40.

#### Feather One Side

Create curved satin with one edge feathered.

If desired, the feathered side may be altered in the properties dialog box.

One edge is feathered, so the start and end points of the stitches on the feathered are random rather than all parallel. The final width of the section is 1.5 to 1.75 times larger than it would be for standard satin, as shown.

The maximum stitch lengths of the feathered satin may be from 2 to 30mm and the satin density may be from 2 to 40.

# **Richelieu Bars**

Richelieu Bars forms bars in the work area. Richelieu bars are often used in lace designs.

## **Richelieu Bars Options**

Use Richelieu Bars Options to set the width and density of the satin bars, the gap between the bars, and the number of bars.

Column	×	TIMN
Richelieu Bars		40.
Options		
Satin Width 2.0 mm		Set the width for the bars
Density 4		——————————————————————————————————————
Method       Image: Minimum Gap Size     6 mm		Set the minimum distance between the bars
Number of Bars 6		Set the number of bars
Include Additional First and Last Bar		Use a bar at both ends of the column
Underlay		
☑ Edge walk		
		Set underlay for the Richelieu bars
OK Cancel Apply	Help	

#### Satin

Set the Width of the satin bars from 1mm to 6mm in steps of 0.1mm. The initial setting is 2mm.

Set the Density of the satin bars from 2 to 15. The initial Density is 4.

#### Method

Select a method for setting the number of bars.

Select Minimum Gap Size to set the distance between the bars from 1mm to 50mm in steps of 1mm. The initial setting is 6mm.

Select Number of Bars to set the number of bars from 1 to 50. The initial number is 6.

Turn off Include Additional First and Last Bar if the edges of the Richelieu bars area are to be covered in satin. This option is initially selected.

#### Underlay

Choose from Edge walk, Center link with zigzag return, and Web double with zigzag return. All three options are initially selected.

Edge walk places lines of running stitch just inside the edges of the satin bars.

- Center link with zigzag return places a central line of running stitch, with a zigzag return line.
- Web double with zigzag return places a crosshatch pattern of stitching with a zigzag return line.

Vary the combination of underlay, depending on the type of design. It is recommended to use all three types for free-standing lace.

# **Tapered Motifs**

Tapered Motifs form columns of motifs that vary in size according to the width of the column. Tapered motifs are often used in lace designs.

## **Tapered Motifs Options**

Use the Tapered Motifs Options to set the motif type, stitch type, and placement method.

Column	×	
Tapered Motifs		
Options Motif Group Universal Category General Motifs 1 Pattern 5 ~ Reverse Mirror Method Minimum Gap Size 0.0 mm Number of Motifs 6 0 Proportional Width 15.0 mm 0 Fit To Line	Stitches Running Triple Length 6.0 mm	Select a motif and its orientation Set a stitch type for the motifs Set the stitch length for the motifs Set the gap between the motifs Number of motifs in the column Retain proportions within column Set the motif width Adjust the position in the column
OK Cancel	Apply Help	

## Motif

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

#### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

#### Stitches

Select Running or Triple stitch for stitching out the motifs. Set the Length of stitches from 1 to 20mm in steps of 0.1mm. Length is initially set to the recommended value for each motif.

#### Method

#### Minimum Gap Size

The Minimum Gap is the minimum amount of extra stitching that is placed between the motifs along the line. This is in addition to any spacing that is part of the selected motif.

#### Number of Motifs

Set the number of Motifs from 2 to 50. The initial number is 6.

#### Fit To Line

Select this option to make the shape of the motifs follow the curves of the line.

When Fit To Line is off, the ends of each motif are placed on the line.

When Fit To Line is on, each motif is adjusted to fit along the line.

#### Proportional

Use this option to keep the relative height and width of the motif in proportion when the column width is changed. This option is selected by default.

#### Width

The Width is initially set according to the chosen motif. The maximum and minimum values for Width are individual to each motif.

## Create Textured Antennae for a Dragonfly Embroidery

- 1 Click File, New 🛅 to open a new window.
- 2 In the Quick Access toolbar, click Insert <u>5</u>.
- 3 In the folder Documents\Premier+2\Samples\Modify\Stitch, open the Perky Dragonfly embroidery to load it.
- 4 Click the Object tab.
- 5 Use Ctrl + click to select both of the antennae. The main stitch type in the antennae is Satin Column.

6 In the Convert drop-down list, select "Satin Column to Tapered Motifs". The Tapered Motifs properties dialog box appears.

If any stitch type other than Satin Column is listed as the stitch type to convert from, deselect and select again.

- 7 Set the Motif Group to Universal and the Category to Hand Stitches 1.
- 8 Set the Pattern to 4, a blanket stitch.
- **9** Leave the other settings unchanged, and click OK to close the dialog box.
- **10** Click outside the dragonfly to view the changed antennae.

Some of the underlay lines may still be present. However, this is not a problem as it adds a texturing effect.

Column	×

# Line Types

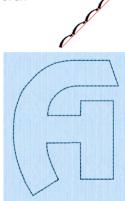

The following line types are available:

- Running Stitch
- Double Stitch
- Double Zigzag
- Triple Stitch
- Satin Line
- Motif Line

# **Running Stitch**

Running stitch is a row of small stitches going forward. Running Stitch is also the preferred option for traveling stitches between sections of an embroidery.

Lines of running stitch are used for light markout or as underlay.

## **Running Stitch Properties**

Running Stitch	×	
		— Set the stitch length
Line	Cutwork Create Cutwork Needle Line Method 2 Cutwork Needles	— Create a cutwork line
	4 Cutwork Needles	Select 2 or 4 cutwork needles
	Secure Points       Include Secure Points       Distance Between       Secure Points	<ul> <li>Create stability gaps in the cutwork line</li> <li>Set the distance between the gaps</li> </ul>
	OK Cancel Apply Help	

Cutwork settings are dimmed (grayed out) as this stitch property is not available in PREMIER+™2 Modify.

#### Length

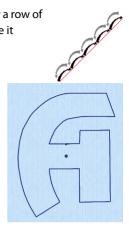

Set the Length of Running stitch from 0.3 to 12mm in steps of 0.1mm.

The initial setting is 2mm.

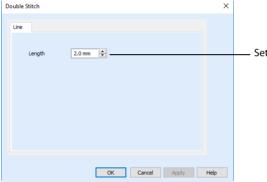

# Double Stitch

Double stitch is a row of small stitches going forward, followed by a row of small stitches going backward, so it ends at the same point where it began.

Double stitch is used for markout and for branching outlines that need to return to their starting points.

## **Double Stitch Properties**

— Set the stitch length from 1mm to 12mm

#### Length

Set the Length of Double stitch from 1 to 12mm in steps of 0.1mm.

The initial setting is 2mm.

# Double Zigzag

Double Zigzag stitch is a row of small stitches going forward, followed by a zigzag row of small stitches going backward, so it ends at the same point where it began.

Double Zigzag is a special stitch type, recommended for lace. A running stitch line is retraced in a zigzag pattern to create a mesh if sections are placed together. Alternatively, use this stitch type for crosshatch fill.

## **Double Zigzag Properties**

Double Zigzag	×	
Line Length 2.0 mm		<ul> <li>Set the stitch length</li> <li>Set the width of the zigzag line</li> <li>Use a linking stitch between sections of Double Zigzag</li> </ul>
OK Cancel Apply	/ Help	

#### Length

Set the Length of Double Zigzag stitch from 1 to 12mm in steps of 0.1mm.

The initial setting is 2mm.

#### Zigzag Width

Set the Width of the Zigzag part of the stitch from 0.2 to 6mm in steps of 0.1mm.

The initial setting is 0.6mm.

Include a Linking Stitch

Use a linking stitch between sections of Double Zigzag stitch.

# **Triple Stitch**

Triple stitch is a row of small three-part stitches, each composed of one stitch going forward, one going backward then one going forward. The stitch length can be changed from 1mm to 12mm for individual lines in the properties dialog box.

Use triple stitch for heavy markout or as heavy joining lines between sections of a character or SuperDesign.

# **Triple Stitch Properties**

Triple Stitch	
Length 2.0 mm 🗢	Set the stitch length
OK Cancel Apply H	3

#### Length

Set the Length of Triple stitch from 1 to 12mm in steps of 0.1mm.

The initial setting is 2mm.

# Satin Line

Satin Line is a line of constant-width satin stitch. It can be used alone, or as a border to a fill. The width of the line can be set from 1 to 12mm.

## Satin Line Properties

Set width and density for satin line.

	Satin Line	$\times$
	Line	
Set the satin line width Set the stitch density for the line Use edge walk underlay inside each edge of the line	Width k.0 mm 文 Start Point End Point Density 4 🗘 V 45 $\bigcirc$ V 45 $\bigcirc$	J
Taper the ends of the satin line		
	OK Cancel Apply He	lp

#### Width

Set Width for satin border from 1 to 12mm. The initial setting is 4mm.

## Density

Set Density from 2 to 15. The lower the number, the closer together the stitches and the more stitches are produced. The initial setting is 4.

Embroidery on thicker fabrics usually looks better with more stitch coverage, or a low density setting. Choose a low value such as 2 or 3 for heavy knit fabrics, a higher value such as 5 or 6 for a light material like linen or satin.

## Underlay

Use this option to place edge walk underlay inside each edge of the satin border. Underlay will not be generated if the Border Width is set below 2mm.

#### **Tapered Ends**

The Start Point and End Point settings can be used to taper the ends of your satin lines.

Use these options to create mitered or pointed ends for your satin lines.

Start Point

Use these options to change the type of line beginning for the satin line. Select a taper type, then set the angle of the taper.

- No Taper
- Left Taper
- Central Point
- Right Taper

To set the Taper Angle ⊮, click the up and down arrows or enter a number.

#### End Point

Use these options to change the type of line end for the satin line. Select a taper type, then set the angle of the taper.

- No Taper
- Left Taper 📕
- Central Point
- 🔹 Right Taper 💐

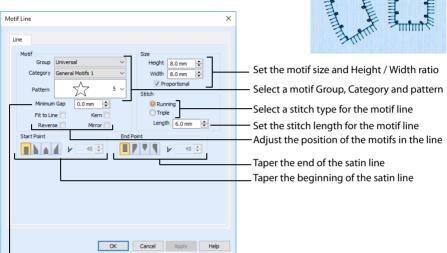

To set the Taper Angle ⊮, click the up and down arrows or enter a number.

# **Motif Line**

Motif line is used for decorative stitches and details.

## **Motif Line Properties**

The Motif Line properties dialog box appears when you select a motif line.

Set the gap between the motifs in the line

#### Motif

#### Group

Click the drop-down arrow to select the desired group of motif patterns.

#### Category

Click the drop-down arrow to select the desired category of motif patterns.

#### Pattern

Click the drop-down arrow to select the desired motif visually. Motifs are also numbered for convenient reference.

#### Minimum Gap

The Minimum Gap is the minimum amount of extra stitching that is placed between the motifs along the line. This is in addition to any spacing that is part of the selected motif.

Fit To Line

Select this option to make the shape of the motifs follow the curves of the line.

When Fit To Line is off, the ends of each motif are placed on the line.

When Fit To Line is on, each motif is adjusted to fit along the line.

#### Reverse

Use this option to reverse the direction of the motif along the line. Some motifs are symmetrical and will have no apparent change when they are reversed.

#### Kern

Use Kern to automatically increase the space between adjacent motifs where necessary, so that the motifs fit along the line without overlapping.

#### Mirror

Use this option to mirror the motif across the line of motifs. Some motifs are symmetrical and will have no apparent change when they are mirrored.

#### Size

#### Height and Width

The Height and Width are initially set according to the chosen motif. The maximum and minimum values for Height and Width are individual to each motif.

#### Proportional

Use this option to keep the relative Height and Width in proportion when either is changed.

#### Stitch

Select Running or Triple stitch for stitching out the motifs. Set the maximum Length of stitches from 1 to 20mm in steps of 0.1mm. Length is initially set to the recommended value for each motif.

#### **Tapered Ends**

The Start Point and End Point settings can be used to taper the ends of your motif lines.

For Motif Lines, the Central Point option starts at the first stitch point in the first motif in the line. The precise position of the point will vary, depending on the motif used.

Use these options to create mitered or pointed ends for your motif lines.

Start Point

Use these options to change the type of line beginning for the Motif Line. Select a taper type, then set the angle of the taper.

- No Taper
- 🔹 🛛 Left Taper 🛓
- Central Point
- 🔹 🛛 Right Taper 🚄

To set the Taper Angle ⊮, click the up and down arrows or enter a number.

#### End Point

Use these options to change the type of line end for the Motif Line. Select a taper type, then set the angle of the taper.

- 🔹 🛛 No Taper 🔳
- Left Taper 📕
- Central Point \u20e4
- Right Taper

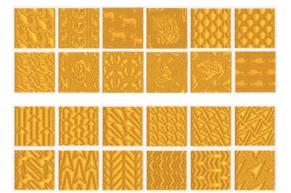

To set the Taper Angle ⊮, click the up and down arrows or enter a number.

# Fill and Satin Patterns

Set the Fill Pattern number for fill areas, satin areas and columns. When a pattern fill area is first created, for example by converting from another stitch type, the initial setting is Pattern 3. Standard satin uses Pattern 0, which is not available for Pattern Fill areas.

Patterns in categories other than Standard are recommended for use in relatively large fill areas, as they have repeating patterns which work well when 'tiled' together. Pattern 36 produces a 'satin effect' fill stitch. The first four patterns in the Gradient & Lace category (253-256) are recommended for multicolor gradient. Patterns 257 to 264 provide banded fill patterns that combine with crosshatch parallel fills to create a weave effect for lace designs. Set Spacing for the parallel fill at 2.4mm to combine with Pattern 257, 2.8mm to combine with Pattern 258, and so on.

For a complete reference to all the fill patterns that can be used, see the Fill Patterns Sample Guide. This is provided as a PDF for viewing and printing.

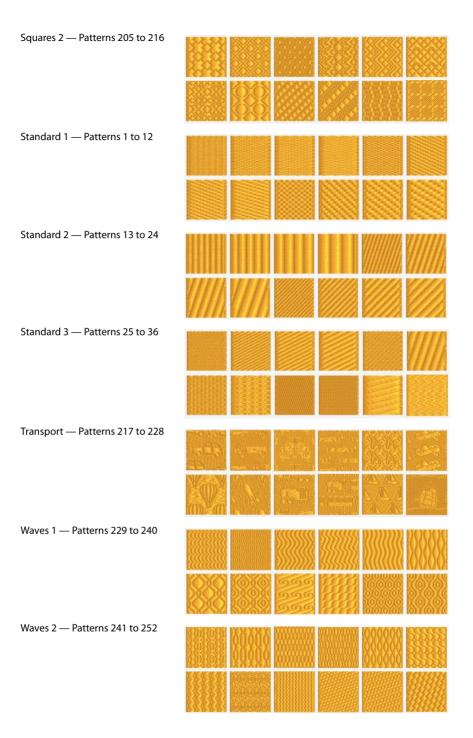

Animals 1 — Patterns 37 to 48

Arrows — Patterns 49 to 60

Circles 1 — Patterns 61 to 72	NUMBER OF STREET, SAME AND ADDRESS OF STREET, SAME

# Printing

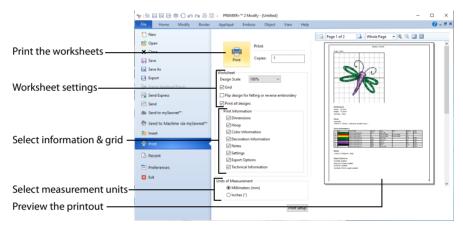

Use the Print page to select your print settings, and to preview and print a worksheet for your embroidery. The printed pages match the Export settings for the embroidery.

To open the print page in PREMIER+<sup>™</sup> 2 Modify, click File, Print <del>=</del>.

To open the print dialog in Explorer in Windows<sup>®</sup>, right-click an embroidery, or a group of selected embroideries, and select Print in the Context menu.

# **Print Page**

Select the printer and page layout in print setup, and choose a scale, hoop, units of measurement, and details to be printed. Then click Print to print the embroidery worksheet and/or overview.

#### Shortcuts

Quick Access Toolbar: 🚔

#### Print

Click Print to open the Print page and print the project. See "Print" on page 256.

#### Worksheet

Select the format of the worksheet. Select a Design Scale, whether to use a grid, and whether to filp the design. Choose the information to show for the embroidery in the worksheet (Dimension, Color Information, Notes and Settings and Technical Information).

#### **Design Scale**

Select 25%, 50%, 75%, 100% or 'to fit' scaling when printing your embroidery. This is how large the embroidery will print compared to the real size of a stitched out embroidery. Use a reduced Design Scale if you want to ensure that the worksheet fits on one page. Look at the print preview pane to see how many pages will be printed.

#### Grid

This determines whether or not a grid will be printed with the embroidery. If you turn this off you will still get a rectangle representing the hoop.

#### Flip design for felting or reverse embroidery

Flip the embroidery for being stitched in reverse, or for felting effects.

#### **Print All Designs**

Select this to print all of the designs in the embroidery, or uncheck to print only the selected subdesign.

#### **Print Information**

This determines what additional information is printed. All items are selected initially.

#### Dimensions

The size of the embroidery and the stitch count.

#### Hoop The hoop used for the embroidery.

#### **Color Information**

The sequence of thread colors used and, if available, the thread specification (range and thread number). Stop Commands and their text (where present) are also shown.

#### Decoration Information Information on the decorations used, and their size, color and number.

Notes and Settings Any notes or settings that are included with the embroidery.

#### Export Options The Export options used for the embroidery, as set in the Export dialog box.

Technical Information The distance of each edge of the embroidery from the center of the embroidery.

#### Units of Measurement Select between Millimeters and Inches.

#### **Print Setup**

Click Print Setup to select a printer in the Print Setup dialog. Choose the units of measurement (inches or millimeters) and print quality. Select and enter details for a table of contents.

#### **Preview Pane**

The preview pane displays the embroidery as it would appear when printed. Other information, such as the Dimension, Color Information, Notes, Settings and Technical

Information, is shown depending on the choices made in the Worksheets section of the Print dialog box.

The print preview toolbar offers you options to zoom in and out of the page, and to show multiple pages in or individual pages in the pages in the pages, step through them with Next Page is and Previous Page .

If you are trying to preview an embroidery that does not lie entirely inside its hoop then the preview will not be shown and a message will appear instead of the Print Preview. Solve this by changing the hoop size or adjusting the embroidery so that it fits the hoop.

#### **Print Preview Toolbar**

The print preview toolbar offers you the following options:

#### Next Page

Preview the next page 🚺 to be printed. If this is grayed out when you are on Page 1 then there are no more pages and the print fits on one page.

Previous Page Preview the previous page 👍 to be printed.

Multiple Pages Select III how many printed pages to preview at a time.

Individual Page Preview only one <a>page</a> at a time.

Zoom In Take a closer look at the page to be printed.

Zoom Out Take a larger look at the page to be printed.

# Print Setup

This is displayed when you click the Print Setup button in the Page Setup dialog box.

Use Print Setup to select the destination printer and its connection.

#### Printer

Select the printer you want to use.

#### Paper Size

Select the size of paper that the embroidery is to be printed on.

#### Paper Source

Some printers offer multiple trays for different paper sources. Specify the tray here.

#### Orientation

Choose Portrait or Landscape. Generally, you should not need Landscape for the standard hoop sizes as the embroidery is rotated automatically by the print process when you print an embroidery that uses a Rotated hoop.

#### Properties

Displays a dialog box that provides additional printing choices, specific to the type of printer you have selected.

# Print

Print the active embroidery on the PREMIER+<sup>™</sup> 2 Modify screen. Other information, such as the Dimensions, Color Information, Notes and Technical Information is printed depending on the choices made in Page Setup. The scale may also be altered and a grid turned on or off in Page Setup. If possible, the hoop will be printed with the same orientation as on the screen. If a horizontal hoop is too wide to fit on the paper at the Design Scale chosen in Page Setup then the hoop will be rotated 90 degrees when it is printed.

The Print dialog box appears, where you may specify number of copies, the destination printer, and other printer setup options.

Print	×
Printer

◯ Selection	123 123 Collate
Help	OK Cancel

If you are trying to print an embroidery that does not lie entirely inside its hoop then a message will appear instead of the Print dialog box. Solve this by changing the hoop size or adjusting the embroidery so that it fits the hoop.

#### Shortcuts

- Quick Access Toolbar: 🖶
- Keys: Ctrl + P; Alt, F, P

#### Printer

Select the printer you want to use.

#### Properties

Displays a dialog box where you can make additional choices about printing, specific to the type of printer you have selected.

## Print to File

When this option is checked, you will be prompted for a file name after you click OK. The print job will then be saved with the file name you specify and can be sent to the printer at a later time.

This is an advanced Windows® printing option.

# Print Range

Select the range of pages you wish to print.

## Copies

Select the number of Copies you wish to print. If you choose to print more than one copy, you can choose to Collate the copies.

# Preferences

Use Preferences into add trims automatically, and set Basting Line, Optimizer and Resize options. When these are changed, the new settings will be remembered when PREMIER+™ 2 Modify is closed and reopened. The sections in the Preferences area are:

- General
- Optimizer
- Resize

File Home Modify B	lorder Appliqué Emboss	Object View	Help

🔀 Exit		O 1.0	nm		

#### Shortcut

File Menu:

# General

Adjust preferences for opening files, and set Basting Line stitch length and margin.

### **Opening Files**

#### Warning when opening files...

Select this option to warn when opening files that contain SuperDesigns, Fonts, or other information that would be fixed as stitches. To keep the original file, make a copy, and then open the copy instead.

#### Add trims automatically

If trims are needed for an embroidery design, automatically add the trims when the embroidery file is opened.

### **Basting Line**

Set the stitch length and margin width for a basting line to secure the fabric and stabilizer before beginning embroidery.

#### Stitch Length

Set the stitch length between 2.0mm and 8.0mm in steps of 0.1mm. The initial setting is 4.0mm.

#### Margin

Set the margin between 0mm and 20mm in steps of 1mm. The initial setting is 5mm.

# Optimizer

Change the settings used by the Stitch Optimizer. This is recommended only if you feel that stitches have been removed that affect the look of the embroidery. Changes to Optimizer Preferences are very rarely needed.

### Sensitivity

Choose the maximum level of sensitivity for Stitch removal with the Stitch Optimizer. Fewer stitches are removed when sensitivity is Low.

The initial value is Low.

## Stitch Length

Choose the minimum stitch length that will be treated as significant by the Stitch Optimizer. Hence, any stitches longer than the selected length will be considered significant and will remain unaffected by the Stitch Optimizer. Any stitches that are shorter than this value will be checked for optimization.

The initial value is 0.8mm.

The choices for Minimum Significant Stitch Length are always shown in millimeters. Cutwork Needle lines in the Inspira Cutwork Needle "thread range" and Felting Needle Colors in the Inspira Felting Needle "thread range" are unaffected by Optimize Stitch Length.

# Resize

These settings are only used when Resize is switched on. They do not affect the Scale function.

### Density

Change from Standard Calculation (%)

Use this to force the density to vary from the original density. It can be useful to set this to a negative value when making an embroidery much smaller than the original.

Uncheck the option to use the standard calculation without having to change the value back to 0%.

Set the density change from -10% to +50%. The initial value is 0%.

## Fill Areas

#### Pattern Sensitivity

Increasing this value improves the recognition of patterns that are hard to identify. When a fill area contains an unrecognized pattern, a flat fill pattern is used. Note that patterned satin (column fill) is treated as a patterned fill area by the Resize function.

Uncheck the option to turn off pattern recognition. This will force replacement of all patterns on fill areas with a flat fill pattern.

Set the sensitivity from 1 to 5. The initial value is 5.

#### Maximum Stitch Length

This limits the length of stitches in fill areas in the resized selection. This is mainly used when making a selection larger.

Uncheck the option to avoid limiting the length of stitches when resizing.

Set the length from 1.0mm to 15.0mm in steps of 0.1mm. The initial value is 5.0mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

#### Maximum Satin Stitch Length before Conversion to Fill

When resizing satin, the average length of stitches is compared to this setting. If the stitches would be larger than this value after resizing, the satin block is converted to a fill area. Note that an area of satin can be made up of several blocks, each of which could be treated differently when the area is resized.

Uncheck the option to prevent converting satin areas to fill.

Set the length from 1.0mm to 15.0mm in steps of 0.1mm. The initial value is 15.0mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

# Single Stitch

#### Single Stitch Length

Use this to set the stitch length for running stitch and single stitches. The stitch curve is recalculated, which can improve the appearance of outlines. When enlarging designs, this prevents long untidy stitches. When making designs smaller, this helps curves and shapes stay accurate, although small details may be partially lost to prevent stitches from becoming too small and dense.

Uncheck the option to resize single stitches without any recalculation of the stitch path.

Set the length from 1.0mm to 15.0mm in steps of 0.1mm. The initial value is 2.0mm.

If you position the arrow pointer over the box without clicking, the alternative units and range will be shown.

## Stitch Optimizer

#### Run Stitch Optimizer after Resize

Use this to automatically optimize the embroidery after it has been Resized. This will improve the quality of the resized embroidery when it is stitched out. It is recommended to use this option, and it is initially selected.

# Troubleshooting

# **Error Messages**

### **Opening the Program**

#### "Feature not available in this version."

This message will appear when trying to start a module or feature if the PREMIER+<sup>™</sup> 2 Embroidery System cannot detect an activation for that module or feature. Ensure that you have activated your software.

Your license may not cover this module or feature. To upgrade, see your dealer or look in the Purchase Center at: www.EmbroideryPurchaseCenter.com

#### "Error - Shapes database is corrupt or missing."

This message appears if the database of shapes, used for Encore shapes, shape fill, and creating border and appliqué shapes, has been corrupted or accidentally moved or deleted.

This error does not prevent PREMIER+ $^{m}$  2 Modify from starting. However, you will not be able to use the relevant functions until this is resolved.

To correct this, start the installation for your PREMIER+<sup>™</sup> 2 Embroidery System software, then choose the Repair option.

If the problem persists, delete the file named 'BorderShapes.bdr' from ProgramData\VSMSoftware\Premier+2\System, and then use the Repair option again.

This assumes you have installed your PREMIER+ $^{\text{TM}}$  2 Embroidery System software in the default location. If the file is not present then this is the reason for the error.

#### Repair an Installation of the PREMIER+<sup>™</sup> 2 Embroidery System

- 1 Put your PREMIER+<sup>™</sup> 2 Embroidery System software USB stick in your computer and re-run the installation. (If you downloaded your software, double-click on the PREMIER+<sup>™</sup> 2 Applications file.)
- 2 When the choice appears, select the "Modify or remove" option and click Next.
- 3 In the next screen, select Repair and click Next.
- 4 Continue with the installation and follow the on-screen instructions.

When the installation is complete, the shapes database will be restored.

### Loading Embroideries

#### "Cannot open embroidery."

This message appears if the desired embroidery is not where the module expects it to be, for example if an embroidery was loaded from a USB memory stick, then closed and the memory stick removed. The message would appear if you tried to load the embroidery from the Recent Files list on the File menu.

#### "Unrecognized file format."

This message appears if the embroidery you are attempting to load is corrupt. For example, it might have the extension .vp4, yet not be a proper Husqvarna Viking / Pfaff embroidery.

#### "Embroidery is corrupt."

The embroidery is corrupt and cannot be loaded. Refer to source of this file for a solution.

#### "Embroidery XY coordinates incorrect."

The embroidery is corrupt and cannot be loaded. Refer to source of this file for a solution.

#### "Unrecognized file extension."

This message appears if you attempt to load a file with an extension that does not belong to any embroidery file types. For example, it would appear if you tried to Drag and Drop a .doc file onto the screen.

#### "Embroidery not created using licensed software."

This message may appear if you attempt to load an embroidery created in third-party software. Such embroideries may cause unpredictable results.

#### "This design contains design information that would be fixed as embroidery stitches; for example, Lettering or SuperDesigns. Do you wish to continue?"

This message may appear if you open a .vp4 file containing lettering or SuperDesigns in PREMIER+™ 2 Modify, as they will be fixed as stitches. Save the embroidery under a new name if you want to keep a copy of the original.

If desired, you can turn this message off in Preferences.

### Using the Program

#### "Feature not available in this version."

This message will appear when trying to start a module or feature if the PREMIER+<sup>™</sup> 2 Embroidery System cannot detect an activation for that module or feature. Ensure that you have activated your software.

Your license may not cover this module or feature. To upgrade, see your dealer or look in the Purchase Center at: www.EmbroideryPurchaseCenter.com

### **Choosing Thread Colors**

# "The color xx has been found in your database, but the thread color is not exactly the same."

This message appears if the Thread Range and Color Number of the selected color are identical to those in your thread database, but some aspect of the color is different. It could be a different material or weight, or have additional colors as a variegated thread. This could happen if the design you are attempting to edit was supplied by someone with

a different version of the color, for instance if they have edited it in MyThreads, or if they have a later version of the thread database. If you click OK, the color will be replaced with the near match. You can alter it to any other color if desired. If you click Cancel, the color will not be changed. To import the new color from an embroidery if it is a MyThreads color, use PREMIER+<sup>™</sup> 2 Thread Cache. To check for the latest updates for the PREMIER+<sup>™</sup> 2 Embroidery System, use Smart Update in PREMIER+<sup>™</sup> 2 Configure.

"Could not find xx in your database. Matching to closest thread in yy." This message appears if the Thread Range of the selected color is not found in your thread database. This could happen if the design you are attempting to edit was supplied by someone with a later version of the thread database. If you click OK, the color will be replaced with the nearest match in the Import Thread Range you have set in PREMIER+<sup>™</sup> 2 Configure. You can alter it to any other color if desired. If you click Cancel, the color will not be changed. To import the new color from an embroidery if it is a MyThreads color, use PREMIER+<sup>™</sup> 2 Thread Cache. To check for the latest updates for the PREMIER+<sup>™</sup> 2 Embroidery System, use Smart Update in PREMIER+<sup>™</sup> 2 Configure.

# "Error - thread range is corrupt or missing. Cannot change thread. Restore MySettings or reinstall the thread database."

This message appears if there is a problem with your thread database. You will be unable to choose a thread color. First close all the modules of the PREMIER+<sup>™</sup> 2 Embroidery System, close down your computer and restart. If this does not clear the problem, restore a backup with Restore MySettings, if you have created one using Backup MySettings in PREMIER+<sup>™</sup> 2 Configure. Otherwise, you either need a new version of the thread database, or a repair install of your PREMIER+<sup>™</sup> 2 Embroidery System, use Smart Update in PREMIER+<sup>™</sup> 2 Configure.

If the error still appears, then repair the installation. First, delete the following files from ProgramData\VSMSoftware\Premier+2\System:

- MySettings2.mdb
- ThreadDatabase2.mdb
- User.sqlite
- System\_cdb2.sqlite

This assumes you have installed your PREMIER+ $^{\text{m}}$  2 Embroidery System software in the default location. If these files are not present then this is the reason for the error. The file names may be shown without their file extensions.

Put your PREMIER+<sup>™</sup> 2 Embroidery System software USB stick in your computer and re-run the Applications installation. (If you downloaded your software, double-click on the PREMIER+<sup>™</sup> 2 Applications file.) When the choice appears, select the "Modify or remove" option and click Next. In the next screen, select Repair and click Next. Continue with the installation and follow the on-screen instructions. When the installation is complete, the thread database will be restored to its original installation state. This means that the MyThreads database will have the default set of threads. This will also reset MyThreadRanges and custom Quick Color Themes to their installation states. Check Smart Update in PREMIER+ $^{\text{m}}$  2 Configure after repairing the installation.

#### "Error: Please select a valid thread."

This message appears if you attempt to click OK in the Color Selection dialog box when MyThreads is selected as the thread range and MyThreads is empty.

To prevent this message appearing again, use  $PREMIER+^{m} 2$  Thread Cache to add at least one thread to MyThreads.

# Modifying Embroideries

#### "Error. Not enough cut points to separate the embroidery."

This message appears when you place only two points to define your cut line. You must place at least three points to define the area that will be separated.

#### "Error. Shapes database is corrupt or missing."

This message usually means that the shape database, used for Draw Border Shape, has been deleted or corrupted. This may be corrected by repairing the installation.

First, delete the file named 'BorderShapes.bdr' from ProgramData\VSMSoftware\Premier+2\System.

This assumes you have installed your PREMIER+ $^{m}$  2 Embroidery System software in the default location. If the file is not present then this is the reason for the error.

Put your PREMIER+<sup>™</sup> 2 Embroidery System software USB stick in your computer and re-run the installation. When the choice appears, select the "Modify or remove" option and click Next. In the next screen, select Repair and click Next. Continue with the installation and follow the on-screen instructions. When the installation is complete, the shapes will be restored.

# "Cannot add tie. This stitch will not be stitched and cannot have a tie placed on it."

This message appears if you try to insert a tie for a stitch that begins with a color or trim command. As it will not be stitched, a tie should not be added to it.

# **Exporting Files**

#### "Embroidery is too large or will not fit in the hoop."

This message appears if an embroidery you are trying to Export is outside the selected hoop or larger than will fit in it. For example, with the 100mm x 100mm hoop selected, an embroidery smaller than 100mm x 100mm might be placed partially outside the work area when you click Export. This message would then appear. Move the embroidery completely within the four blue corners of the work area and try again.

#### "Embroidery too large for export format."

Certain formats are limited to the number of stitches they can save or the size of hoop used on their specific embroidery machine, for example .sew. If you attempt to save a file

in this format that is bigger than the largest available hoop size or has more stitches than are allowed, this message would appear.

#### "Unrecognized file extension."

This message appears if you type an incorrect extension that does not belong to any embroidery types in the File Name box when trying to save a file.

#### "Cannot save file."

This message appears if, for instance, you have loaded an embroidery from a CD-ROM and then attempt to save the embroidery back to the CD. A CD-ROM is read only, therefore you will not be able to save the embroidery.

#### "You can't save here. Please choose another location."

This message appears if, for instance, you have loaded an embroidery from a CD-ROM and then attempt to save the embroidery back to the CD. A CD-ROM is read only, therefore you will not be able to save the embroidery.

#### "Embroidery has too many stitches for file format."

There is a limit on the number of stitches that may be saved to an embroidery file in Pfaff (.pcs) file format. This message appears if the embroidery you attempt to save to this format exceeds this limit.

#### "No stitch data to save."

This message appears on attempting to save when there is no embroidery on the current window.

## **Printing Embroideries**

"No embroideries available to print. Only embroideries that are inside the hoop can be printed."

This message appears if the embroidery on screen is partially outside the selected hoop. Move the embroidery completely within the four blue corners of the work area and try again.

### Miscellaneous

#### "Not enough memory available to perform function."

This message will appear if system resources are low. Close other programs and try again. If this does not work, try restarting your computer.

# **Other Topics**

## Screen Appearance

"It seems to take a long time to redraw embroideries when I choose different functions or switch to a new embroidery."

The refresh rate of the screen is limited by the power of your computer's processor and RAM as well as the video card and its memory. Try using 2D view as this requires less power than 3D view.

"Some of the icons in the Ribbon Bar or Toolbar are 'grayed out'." Certain icons (for example Copy and other Home tab icons) are only highlighted once an embroidery is shown on the screen.

"I have changed grid color and spacing and now I wish to return to the original settings."

Use PREMIER+<sup>™</sup> 2 Configure to change the grid color. Follow the instructions in PREMIER+<sup>™</sup> 2 Configure and select Blue Gray (RGB values 102, 102, 153) from the standard color drop-down on the Grid Color button.

Use the View tab to change the grid spacing. Set the Grid Size to 5.

"I have changed the screen background color and now I wish to return to the original light blue."

Use PREMIER+<sup>™</sup> 2 Configure to change the background color. Follow the instructions in PREMIER+<sup>™</sup> 2 Configure and select the RGB values 211, 233, 255 in the Colors dialog box.

## Loading Embroideries

"I can't drag and drop embroideries from the Open dialog box." To drag and drop embroideries onto the Work Area, in Windows® 10 and 8, click File Explorer on the Status Bar. In Windows® 7, right-click Start, then Explore to start Windows® Explorer. Then follow the instructions under Drag and Drop. See "Load Embroideries with Drag and Drop" on page 16.

### **Importing Pictures**

"The From Scanner or Camera option is not available, even though my scanner/camera is plugged in."

The From Scanner or Camera option may not be available, even though you have installed and connected a scanner/camera, if it does not support Windows Image Acquisition (WIA). If your scanner/camera supports a different image acquisition system, e.g. TWAIN, create a .PNG or .JPG file of the image in My Pictures, and load it from there.

## Embroidery appearance and selection of stitches

"The embroidery I want to work with appears too small on the screen." Make sure the PREMIER+<sup>™</sup> 2 Modify window is maximized by clicking the Maximize icon on the title bar, then maximize the window of the desired embroidery by clicking the Maximize icon on its title bar. Click Zoom To Fit to expand the embroidery so it fills the window or use Zoom To Rectangle together with the Overview Window to move around the embroidery.

# "When I hover the mouse pointer over a color in the color worksheet, part of the embroidery changes to an unusual color."

This is called "Highlight Selected Color". It allows you to see where each color is used in an embroidery. For example, if you have several color blocks using the same thread color and you wish to change the color of a specific section, hover over each color in the worksheet in turn until the section you require is highlighted.

# "The selection outline partly or completely disappears when I move a selected block."

This can happen two reasons:

- The block has at least one perfectly vertical or horizontal edge
- The block is composed of very wide satin columns

#### Blocks with perfectly vertical or horizontal edges

The selection box around the selected block is drawn using a method to provide maximum contrast with the background. The outline that shows the shape of the block is drawn using the same method. When the two lines are in the same place, they cancel each other out. If the block of stitches is a rectangle or a square, the outline may disappear completely when you move the block. Notice that the scaling, mirror and rotate handles are always visible, so you can use these as cues for positioning blocks where the edges are not visible.

#### Wide satin columns

Satin columns that are made of very long stitches may be interpreted as a series of movement stitches when the outline is detected. Movement stitches are ignored by the outline detection, so wide satin columns may have no outline, or other stitches overlapping the column may be outlined instead.

#### Positioning blocks with missing outlines

Click and drag the block approximately into position. Use the arrow keys on the keyboard to nudge the block into its final position without needing to see the outline.

#### "I find it hard to select the part of the embroidery I wish to edit."

Many functions of PREMIER+<sup>™</sup> 2 Modify can be used to help see sections of embroideries more easily. They include the Zoom Commands and the Overview Window, as well as the Draw Next Color Block and Draw Previous Color Block, Draw Range and Ghost Mode. The

Stitch Player and Coordinates can also be used to help run through embroideries to find the required stitch or command. The different methods of selection (Box Select, Color Block Select, Freehand Select, Freehand Point Select and Select All Visible) are also useful for different situations.

"I selected part of an embroidery, then tried to Compensate the block. The compensation has been applied to the whole embroidery, not just the area selected."

Compensation works on the visible part of an embroidery. Hide stitches with Draw Range, Draw Next Color Block or turn colors off by right-clicking in the color worksheet to isolate a specific area before using this function.

"I selected part of an embroidery, then tried to Break Up Stitches. Stitches have been broken up in the whole embroidery, not just the area selected." Break Up Stitches works on the visible part of an embroidery. Hide stitches with Draw Range, Draw Next Color Block or turn colors off to isolate a specific area before using this function.

# "I cannot select the desired color using the Color Block Select function, because one color is on top of the other."

Use Draw Next Color and Draw Previous Color or turn colors off in the Color Worksheet to isolate the desired color area, then click Color Block Select to select those stitches.

## Creating Border/Appliqué

#### "The points on my border shape are blunt."

This may happen with some border shapes that have sharp points if they are not drawn proportionally, or if you create very sharp points with Freehand Tablet or Point Border. This may also happen when border shapes are used at very small sizes.

For best results when drawing preset shapes with sharp points, it is recommended to hold down Ctrl so that the shape is perfectly in proportion.

When using Freehand Tablet or Point Border, if you need to have an acute angle, try placing an extra point or two around the turn, instead of using a single point. Also, try to join the polygonal border back to itself on a straight side. If the border starts and finishes at a corner, that corner will not be mitered because the ends of the border will be flat at that point.

# "When using Border Embroidery only the Create Overlay Border option is available."

This may happen with some embroideries containing holes or appliqué areas. Where multiple lines are found, there cannot be a single external or internal border, so only the Create Overlay Border option is available for use.

## **Creating Cutwork**

# "Some of the stabilizing lines on my cutwork are placed in the wrong sequence."

If you use ColorSort on multiple areas of cutwork with stabilizing lines, in some circumstances the stabilizing lines may be merged. Move the color blocks in the Color Select area of the Design panel to change the order of designs with multiple cutwork areas.

# Using Design Player

"Why is the stitch order of my appliqué embroidery different in Design Player than in Stitch Player?"

Design Player uses the Export settings in PREMIER+<sup>™</sup> 2 Configure when displaying the stitching out of an embroidery. Stitch Player uses the stitch order as seen in the Color Select area of the Design Panel. When an appliqué piece is created in the Border tab, the appliqué placement stitches are placed before the embroidery, and the border is placed after the embroidery. If the embroidery is ColorSorted, the placement stitches and border may become part of the same block. If ColorSort is selected in the Optimize for Sewing settings in the Export tab of PREMIER+<sup>™</sup> 2 Configure, Design Player will then show the appliqué stitches as a single block.

# Cancelling unwanted actions

"I used Box Select around an area, but selected some stitches I didn't want. Undo is grayed out so I can't click it."

To cancel a stitch block selection made using Box Select, Color Block Select, Freehand Select, Freehand Point Select or Select All Visible, click anywhere in the currently active embroidery, but outside the box showing the selected stitches. The stitches will no longer be selected.

"I have started to Emboss an embroidery using the Stamp Fill and realize I have not isolated the part of the embroidery I wish to pattern."

Click Undo once the stamping process is complete, then isolate the desired stitches and use Stamp Fill again. If necessary, click Undo once more to Undo the use of Remove Needle Points in Fill.

"I have a very large embroidery in the clipboard block. How do I remove it?"

Click the clipboard block to clear the current contents.

# Quick Reference Guide

# **Ribbon Tabs**

## File Tab/Menu

*	New	Create a new embroidery. Ctrl + N
<b>~</b> °	Open	Open an existing embroidery in a new window. Ctrl + O
×	Close	Close the current window. Ctrl + F4
<b>.</b>	Save	Save the embroidery as a multipart embroidery in .vp4 format. Ctrl + S; Alt, 2
8	Save As	Save the embroidery as a multipart embroidery in .vp4 format under a new name. Ctrl + Shift + S; Alt, 3
<b>:</b>	Export	Save the embroidery in the current window as a flattened .vp4 file, or in an alternative embroidery format, optimized for stitching. Ctrl + E; Alt, 4
⊳	Export Appliqué Pieces	Save or print appliqué outlines ready for cutting by a fabric cutter or INSPIRA™ Cutwork Needles. Ctrl + Shift + E
<b>.</b>	Send Express	Send the selected embroidery to the screen of the connected embroidery machine. Ctrl + K

	Previous Design	Select the previous design in the stitchout order. Shift + Tab; Alt, H, PD
	Next Design	Select the next design in the stitchout order. Tab; Alt, H, N
	Move Forwards	Bring the selected embroidery one step closer to the front. Alt, H, MF
•	Move Backwards	Bring the selected embroidery one step closer to the back. Alt, H, MO
	Combine with Previous	Merge the design with the previous design in the stitchout order. Alt, H, CW
Нос	p	
L		

Change Hoop	Choose the hoop size you wish to use in PREMIER+™ 2 Modify. Ctrl + H; Alt, 6; Alt, H, H; Alt, V, H
Life View	Show how an embroidery exported from the project will look in 3D with real-world perspective. Share a picture or video of your design on your favorite social media site. Ctrl + L; Alt, H, L; Alt, 9
Design Player	Play through the stitches in the embroidery as if they were being stitched from an exported embroidery. Share a picture or video of your design on your favorite social media site. Ctrl + J; Alt, H, J; Alt, 0

## Modify Tab

Modi	ify Design						
₩	Compensate Stitches		Make the visible area of stitches in the currently active embroidery 'bolder'. Alt, M, CS				
848	Break Up Stitches		Add extra stitch points to the embroidery so that no stitches are longer than the specified maximum length. Alt, M, BU				
	Density Advisor		View the density of the embroidery and, if desired, reduce the density. Alt, M, DA				
\$	Stitch Optimizer		Improve the stitchout of the embroidery, both in speed and quality. One of the effects is to remove unnecessary short stitches. Alt, M, S				
>	Trim Commands	5					
		20	Automatically Add Trim Commands Add Trim Commands before most movement stitches in the visible stitch area. Alt, M, TC, A				
		28	Remove All Trim Commands Remove all Trim Commands in the visible stitches of the design. Alt, M, TC, R				
	Monochrome		Change all visible stitches to one color. Alt, M, MO				
28 98 98	Basting Line						
			Basting Line for Visible Stitches Insert a rectangular basting line automatically around the visible stitches to secure fabric and stabilizer before beginning embroidery. Alt, M, BL, BL				
			Basting Line for All Designs Insert a rectangular basting line automatically around all designs to secure fabric and stabilizer before beginning embroidery Alt, M, BL, BF				
Ö	Design Separator		Break an embroidery into two subdesigns along a line that you place around a section of the embroidery. Alt, M, DS				
88	Alignment Stitches		Set the selected subdesign as Alignment or Normal stitches. Alt, M, A				
Modi	Modify Stitch						
**	Insert Color Command		Add a new color change at the point where you click. Alt, M, IC				
ş	Insert Trim Command		Add a Trim Command, which instructs some embroidery machines to cut the thread, at the point where you click. Alt, M, IT				

	Delete Commands		Delete an unwanted Color Change, Stop or Trim command. Alt, M, DC
8	Insert Stop Command		Add a Stop command, which instructs the embroidery machine to stop, at the point where you click. Alt, M, IS
	Edit Stop Command		Add or change the message for any existing Stop Command. Alt, M, E
*	Insert Stitches		Add new stitches to an embroidery. Alt, M, IN
ĸ	Insert Tie On		Add a tie stitch at the beginning of the stitch area to be secured. Alt, M, IO
<b>%1</b>	Insert Tie Off		Add a tie stitch at the end of the stitch area to be secured. Alt, M, IE
Morp	hing		
×	Magnet		Pull stitches in towards the point where you click. Alt, M, MA
Ø	Polarize		Push stitches away from the point where you click. Alt, M, P
x	Twirl		Move stitches around the point where you click. Alt, M, TW
2	Wave		Move stitches in a wave pattern around the point where you click. Alt, $M,W$
$\checkmark$	Global Morphing		Move all visible stitches using one of eight morphing effects. Alt, M, G
Cutw	ork		
5	Cutwork Line		
		2	Freehand Tablet Cutwork Line Use Freehand Tablet Cutwork Line to draw a line to be cut using cutwork needles. Alt, M, CL, FT
		5	Freehand Point Cutwork Line Use Freehand Point Cutwork Line to place points to define a line to be cut using cutwork needles. Alt, M, CL, FP
			Options Adjust the settings for your cutwork line. Alt, M, O

## Border Tab

Draw	Draw Border Line					
C Border Line						
		1	Freehand Tablet Border Line Draw a line of any shape to create a border. Alt, B, BL, FT			
		5	Freehand Point Border Line Place points to define a line of any shape to create a border. Alt, B, BL, FP			
	Border Shape		Draw the border shape selected in the list of preset shapes. Alt, B, BS			
	Border Shapes		Select the desired preset border shape. To draw a shape that is not in the list, use a Freehand Border.			
÷	Border Embroidery		Create a border automatically around the selected embroidery or stitches. Alt, B, BE			
	Margin		Set the distance between the embroidery and the automatic border.			
Stitch	Туре		Select a stitch type for the border line.			
	Satin Line		Create a line of satin stitches of constant width.			
	Motif Line	and the state	Create a line of motif stitches.			
	Running Stitch	/	Create a line of running stitches (small consecutive stitches).			
	Triple Stitch	and the second sec	Create a line of triple stitch (small three-part stitches, each composed of one stitch going forward, one going backward then one going forward).			
	Options		Open the options dialog for the line. Alt, B, OP			
Appli	qué					
<b>_</b>	Add Appliqué		Add appliqué stitches and fabric to your border. Alt, B, A			
<b>, 1999</b> ;	Select Fabric		Audition a new fabric for your border appliqué. Alt, B, SF			
	Options		Open the Appliqué Selection dialog box. Alt, B, OT			
Create	e Border					
<b>Q</b>	Create External Border		Keep only the stitches inside the shape that has been drawn and add a border around the stitches. Alt, B, CE			
	Create Internal Border		Keep only the stitches outside the shape that has been drawn and add a border inside the stitches. Alt, B, Cl			
D	Create Overlay Border		Add a border on top of the embroidery. Alt, B, CO			

# Appliqué Tab

App	liqué Piece		
$\bigcirc$	Appliqué Outline		
		1	Freehand Tablet Appliqué Outline Draw to define a line of any shape to create an appliqué outline. Alt, A, AO, FT
		5	Freehand Point Appliqué Outline Place points to define a line of any shape to create an appliqué outline. Alt, A, AO, FP
0	Appliqué Hole		
		2	Freehand Tablet Appliqué Hole Draw to define a line of any shape to create a hole within the selected appliqué outline. Alt, A, AH, FT
		5	Freehand Point Appliqué Hole Place points to define a line of any shape to create a hole within the selected appliqué outline. Alt, A, AH, FP
	Express Appliqué		Automatically find appliqué stitches within the visible stitches in an existing embroidery, and apply an appliqué fabric to them. Alt, A, Q
	Select Piece		Select an Appliqué Piece to alter its shape and preview or adjust its fabric. Alt, A, SP
>	Next Piece		Select the next Appliqué Piece in the stitchout order. Alt, A, N
<	Previous Piece		Select the previous Appliqué Piece in the stitchout order. Alt, A, P
, K	Insert Points		Add new points into the currently selected Appliqué Piece. Alt, A, I
×	Delete Points		Delete points from the currently selected Appliqué Piece. Alt, A, DP
Q	Delete Piece		Delete the currently selected Appliqué Piece with its outline. Alt, A, DE
<b>,</b> ;	Select Fabric		Audition a new fabric for the currently selected Appliqué Piece. Alt, A, SF

# Emboss Tab

The Emboss tab is used to add stitch points along lines and stamp the embroidery with new stitch point patterns.

Effect			
	Standard		Create a light stamped effect. Alt, E, ST
	Super		Create a heavy stamped effect. Alt, E, SU
Need	le Points		
٢	Emboss Line		
		2	Freehand Tablet Emboss Line Draw a line to emboss on an area of stitching. Alt, E, E, FT
		5	Freehand Point Emboss Line Place points to emboss a line on an area of stitching. Alt, E, E, FP
	Remove Needle Points In Fill		Remove most of the needle points within an area of stitches, leaving the area blank so that the stamp you apply will show clearly. Use in preparation for stamps or placing lines of stitches. Alt, E, R
Stam	OS		
	Category		Select a set of stamps by name from the drop-down list.
	Stamps		Use the scroll bar to the right of the Stamps to view them.
<b>~</b>	Load Stamp File		Load a 4QB file to use as a stamp. Alt, E, L
A	Create a Text Stamp		Use the TrueType® or OpenType® fonts on your computer to create a stamp with your selection of letters. Alt, E, C
	Size		Set the stamp Size from 2 to 50mm in 1mm steps. Alt, E, SI
	Rotation		Rotate the stamp to any angle from 0 to 359 degrees. Enter a value directly or use the small up/down arrows at the side of the box. The sample box shows the change. Alt, E, RA
	Stamp Sample		Shows the selected stamp. The stamp sample rotates if the Rotation is changed.
-	Vertical Flip		Use Vertical Flip to mirror the selected stamp from top to bottom. Alt, E, V
	Horizontal Flip		Use Horizontal Flip to mirror the selected stamp from side to side. Alt, E, H
1	Single Stamp		Place individual stamps where you click. Alt, E, SS

Ł	Stamp Line		
		8	Freehand Tablet Stamp Line Draw lines of stamps in any direction. Alt, E, SL, FT
		5	Freehand Point Stamp Line Place points for lines of stamps in any direction. Alt, E, SL, FP
*	Stamp Fill		Fill all visible stitches with the currently selected stamp. Alt, E, SF

# **Object Tab**

Edit Properties				
	Stitch Type	Shows the stitch type(s) for the currently selected object(s). Alt, O, T		
	Properties	Change the properties of the currently selected object(s). Alt, O, P		
•₹	Lighter Density	Make the stitches more open in the currently selected object(s). Alt, O, L		
*	Heavier Density	Make the stitches more closed in the currently selected object(s). Alt, O, H		
┥┝	Convert	Change the stitch type for the currently selected object(s). Choose the type to convert from the drop-down list. Alt, O, CO		
Modi	ify Object			
-	Remove Underlying Stitches	Remove all visible stitches within the area of the selected object, except those in the object itself, and those stitched after it. Alt, O, R		
0 ⊙→⊙	Align Origin Handles	Aligns the Origin Handles of multiple fill areas to the same location. Use to align patterns or focal points. Alt, O, A		
	Show Only Object	Move the sliders to show only the selected object. Alt, O, S		
Node	25			
<b>K</b>	Insert Points	Add a new point into the current fill area or line. Alt, O, I		
۲	Delete Points	Delete one or more points from the current fill area or line. Alt, O, DP		
Multi	Wave Lines			
	MultiWave Line			
		Freehand Tablet MultiWave Line Draw one or more MultiWave lines within the selected MultiWave Fill object. Alt, O, ML, FT		
		Freehand Point MultiWave Line Place points to define one or more MultiWave lines within the selected MultiWave Fill object. Alt, O, ML, FP		
×	Delete MultiWave Line	Delete one or more MultiWave lines from the currently selected MultiWave Fill object. Alt, O, DM		

### View Tab

Grid		Show or hide the background grid.		
###	Grid On	Show the grid. Alt, V, GO		
	Grid Numbered Half	Show the grid, with grid line numbers along the top and left sides. Alt, V, GN		
	Grid Numbered Full	Show the grid with grid line numbers on all sides. Alt, V, GF		
₽	Grid Off	Hide the grid. Alt, V, GR		
	Grid Size	Set the distance between the lines in the Grid. Alt, V, GS		
1?	Get Length	Measure the distance between any two points on an embroidery. Alt, V, L		
View	/ Mode			
3D	3D View	View embroideries and background in standard 3D mode. Ctrl + T; Alt, V, 3		
20	2D View with Stitch Points	See the individual stitches in your embroideries as lines with no shading, and with stitch points. Alt, V, 2V		
<b>2D</b> 1	2D View without Stitch Points	See the individual stitches in your embroideries as lines with no shading or stitch points. Alt, V, 2W		
80	Commands	Show or hide the command markers for Color Change, Stop, Appliqué and Trim. Alt, V, CO		
х,у	Coordinates	Show coordinates of the first and last visible stitches. Alt, V, CR		
Ноо	р			
0	Change Hoop	Choose the hoop size you wish to use in PREMIER+™ 2 Modify. Ctrl + H; Alt, 6; Alt, V, H		
Desi	gn Panel			
	Show Design Panel	Show the Design Panel. Alt, V, D		
Wind	Window			
	Cascade	Arrange multiple windows in the work area in an overlapped fashion. Alt, V, CA		
	Tile Windows	Arrange the embroidery windows in the work area so they can all be seen. Alt, V, T		
	Switch Windows	Move to another window. Alt, V, SW		

## Help Tab

?	Help Topics	List help topics. F1; Alt, P, H
FAD	Internet FAQs	Use the Internet to access answers to Frequently Asked Questions on the software. Alt, P, I
1	Learning Center	View interactive training tutorials and videos on the Internet. Alt, P, L
٥	Purchase Center	Purchase additional modules on the Internet. Alt, P, P
R	About PREMIER+™ 2 Modify	Display module information, version number and copyright. Alt, P, A

## **Toolbars**

## Quick Access Toolbar

<b>&gt;</b>	Insert	Insert an existing embroidery into your current project. Ctrl + I; Alt, 1
<b>.</b>	Save	Save a multipart embroidery under the same name. Ctrl + S; Alt, 2
	Save As	Save a multipart embroidery under a new name. Ctrl + Shift + S; Alt, 3
•	Export	Save the embroidery in the current window as a flattened .vp4 file, or in an alternative embroidery format. Ctrl + E; Alt, 4
<b>.</b>	Print	Print the selected embroidery(ies) and background. To set page options, use File, Print. Ctrl + P; Alt, 5
0	Change Hoop	Choose the hoop size you wish to use in PREMIER+™ 2 Modify. Ctrl + H; Alt, 6; Alt, V, H
5	Undo	Undo the last action. Ctrl + Z; Alt, 7
2	Redo	Redo the previously undone action. Ctrl + Y; Alt, 8
0	Life View	Show how an embroidery exported from the project will look in 3D with real-world perspective. Ctrl + L; Alt, 9; Alt, H, L
	Design Player	Play through the stitches in the embroidery as if they were being stitched from an exported embroidery. Ctrl + J; Alt, 0; Alt, H, J

## Selection Toolbar

[]]]	Box Select	Select a number of embroideries by opening a square or rectangular box around them.
$\langle O \rangle$	Freehand Select	Select a number of embroideries within an area of any shape.
000	Freehand Point Select	Select a block of embroideries within an area of any shape, defined by a series of points.
$\leq$	Select Stitches	Select and edit single stitches.
*	Color Block Select	Select a stitch color by clicking the color in the embroidery. All visible stitches of the clicked color are selected.
88	Select All Visible	Select all visible stitches. Use in combination with hidden colors and Draw Range. Ctrl + A
	Select None	Deselect all of the embroideries in the work area, including any outside the hoop. Ctrl + Shift + A

## QuickLink Toolbar

For information about the contents of the QuickLink toolbar, please refer to the PREMIER+<sup>™</sup> 2 Embroidery Guide.

# **Design Panel**

Design Information

Stitch Count **E**: The Stitch Count of the embroidery.

Height 1: The Height of the embroidery.

Width 🕂: The Width of the embroidery.

**Colors &**: The number of colors in the embroidery.

### **Color Select**

A worksheet panel showing the color blocks in the embroidery. It is used to change the thread color and add thread or needle effects, show which color blocks are visible and turn the display of color blocks on and off, move color blocks up  $\clubsuit$  and down  $\clubsuit$  the design, and merge sc color blocks.

The Draw Range may hide threads in a visible color block.

#### Notes

Enter up to 2000 characters in the Notes for information and keywords about the embroidery.

#### Settings

Enter up to 2000 characters in the Settings for information on the techniques used for the embroidery.

Edit Edit the Notes or Settings.

#### **Clipboard Block**

The Clipboard Block shows the current block that can be pasted into your embroideries.

#### **Overview Window**

The overview window gives a small overview of the whole work area for the current embroidery.

# **Control Strip**

#### Draw Range

The left slider bar and stitch number box set the Draw From Start stitch number. The right slider bar and stitch number box set the Draw To End stitch number. Move the appropriate slider bar to change the start or end stitch number, or enter a stitch number directly in the box. Stitches are not displayed when the color block containing the stitches is hidden.

#### Stitch Player

r		
000	Pause for Commands	When Pause for Commands is enabled, the Stitch Player will pause at every Color Change, Stop or Trim command and display any messages.
м	Start	Jump to the first stitch in the embroidery and stop.
	Fast Rewind	Play in reverse at triple speed.
	Medium Rewind	Play in reverse at double speed.
•	Rewind	Play in reverse.
	Stop	Stop play.
	Play	Play at normal speed.
••	Medium Play	Play at double speed.
•••	Fast Play	Play at triple speed.
M	End	Jump to the last stitch in the embroidery and stop.

#### Display

<&	Draw Previous Color Block	Step through the color blocks in reverse order.
	Draw Next Color Block	Step through the color blocks one at a time.
%	Invert Visible Color Blocks	Switch the visibility of the color blocks so that those that were visible become hidden, and those that were hidden are displayed.
<0	Previous Stop	Step through the Stop commands one at a time.
⊗>	Next Stop	Step through the Stop commands in reverse order.
	Draw All Stitches	Display all stitches in the currently active embroidery.
	Ghost Mode	Display pale 'ghost' stitches where there are hidden stitches in the currently active embroidery.

## Status Bar

Use the Zoom Commands on the Status Bar to navigate around embroideries.

Ca.	Zoom To Rectangle	Increase magnification of an area of the embroidery. Ctrl + 0
鋷	Zoom To Fit	Fit the work area to the screen. Ctrl + 9
		100% Display at 100% magnification. Ctrl + 1
		200% Display at 200% magnification. Ctrl + 2
		400% Display at 400% magnification. Ctrl + 3
		800% Display at 800% magnification. Ctrl + 4
		75% Display at 75% magnification. Ctrl + 5
		50% Display at 50% magnification. Ctrl + 6
		25% Display at 25% magnification. Ctrl + 7
Θ	Zoom Out	Decrease magnification. Ctrl + -
+	Zoom In	Increase magnification. Ctrl + =
